Hello all,
I have to trade a 486 persaio 924 computer and a ICOM 27 and KPC 2 TNC for a good working Kenwood HF rig (TS 430, TS 140, TS 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. The ICOM 27 has tone mic and does 45 watts. I will also consider tradeing the ICOM 27 and KPC-2 TNC or the computer for a TS 130 TS 120. I'm looking for a Kenwood HF rig for moblie operation. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,
Oris

Maha makes a replacement battery for this radio (the Maha number is MH BP200) and they claim to have redesigned the clip to make it stronger. I bought one, and do not see any difference between the Maha and the Icom spring clip. The Maha clip is not thicker, nor is it tapered (as was suggested on the web site cited above). I can see no difference between the two batteries as far as material. I have not personally had problems with a breaking clip yet, however.

Source record: 124993

Hi,
I just bought an Icom IC-Q7A and it worked fine for 5 days. Yesterday it
just switched itself off during listening and refuses to turn back on.
Completely dead.
Here is what I checked:
- batteries
- did quick reset
- did full reset

No luck. Anyone got any suggestions on might have gone wrong?

Source record: 124747

Hello Floyd: Yes I had a problem with a Bearcat 220 scanner, a few years ago, and wanted to send it in for repair. But Uniden will not fix the older Bearcat scanners. I take this as a ploy to force the scanner buying public to buy a new scanner. I bought a new Radio Schack Pro-2006, and got the service manual, and fixed the Bearcat 220 myself. I make a point of showing everyone my repaired Bearcat scanner, that Uniden refused to fix. Then I show them my Radio Shack and AOR scanners.

Yep, I won't buy anything from Uniden, after that slap in the face.

Jay at jay123a@ptw.com .... In the Great Mojave Desert, just down the road ah ways from the fillin staton.

I don't care about either of them, but Mr. Neece should be more careful with what he says in an open forum. The gov. can trace where msgs. are sent from and could use such statements against you. YMMV

From: Jim Bugno <n3sjb@epix.net>
Message-ID: <365E2BB5.7795540F@epix.net>
Source record: 124750

Hello, can anyone please tell me how I can obtain the serial port
pinout diagram of the cable for my YAESU FT-767GX CAT TUNING system.
I have the pinout of the 6pin DIN plug for the back of the radio in the
manual, but they didn't include
the pinout for the DB9 connector.

Thanks

Jim Bugno

Hi,

Just bought a Diamond MV3 mobile antenna to use mobile with an IC706.
Doesn't seem to want to tune out of the box, appears to be quite long.
Before I start cutting, anybody have any experience with this antenna?

Long term idea is to use one of those LDG auto-tuners with a whip, any
comments along these lines.

Thanks,

Jim

2474. Re: Your favorite HT

My favorite dual band HT is DEFINATELY no question about it, the Yaesu FT-50R. I didn't know if you meant a dual band mobile or HT. So, my favorite dual band mobile would be the Yaesu FT-8100. I owned the Yaesu FT-8500 and like that radio. A bit too complicated to do such little things as setting the PL tone, so I decided to go with the 8100. Absolutely love the rig! God luck with your choice. Remember, all the newer HT's are pretty much considered "good". What seperates them is personal preference and some features that some people might use, and others wouldnt.

Source record: 124753

Hello everyone. I decided to upgrade my HF station and am trying to choose between rigs. I am trying to choose between the Yaesu FT-900AT and the Kenwood TS-450SAT. It will be used as a base rig. I hear that the 900 is better, then I hear that the 450 is a better rig. I did as much research as I can. I have not used either rig, but have seen them, and saw specs, etc. Which rig, overall, as a base, is better? The FT-900 or the TS-450? I am also looking for any feedback for these rigs from any owners or users of these rigs. All feedback will be greatly appreciated. Reply via E-Mail would be appreciated, but will look on newsgroup for replies as well. Tnx every1

> > Bearcat/Uniden product.

a lot of the older scanners used propritary (sp?) components, parts that you cant call a distrubutor and order off the shelf, the mfg. has x number of extras produced for replacement parts and for service , when they are gone they cannot repair any more of that unit. i dont think you or i would be willing to pay the extra money that it would cost the mfg to stock enough of every part for every radio they make. i dont know if this is correct but i rember hearing that there is a law requireing companys to provide parts and service for a minimum of 7 years.

can any tell me of any radio manufacture that has been in existance for more than a couple of years that can sell every part for every radio that thay have ever made? how about every radio they made in the last 10 years?
i know that radio shack cant supply parts for my 15 year old sw recienер, i accept that i am working arount the problem and working on a replacement part. i dont bitch and moan to the news group about that!

The inconsistent chemical mix and production variables within a production run throws all the small sample tests into a cocked hat. On average, large quantity samples, there is not much difference between the major brands. The observation that capacity is related to weight is generally true, the best batteries are always heavy, but not necessarily vice-versa. Some store brands are good buys also, but hard to predict which. Now, about storage. You people up north don't have much to worry about, but here in South Texas, where the night time temperature stays above 80 deg. F all night for most of the summer, refrigeration is a definite plus. Just stay above 32 Deg. F. There are a lot of quirks with batteries. I was involved with a system which used silver oxide watch batteries with a few nanoampere load. So low we couldn't accurately measure it directly, had to use substitution techniques, then the chip was light sensitive, so that further complicated matters. Anyway, under this tiny load, the batteries consistently outlasted unused spares in storage by a life factor of 2. Go figure.
Happy Thanksgiving,
Crazy George

I am trying to sell my equipment in order to purchase a Yaesu FT-50rd-hp.
Here is a list of the merchandise.

1. Radio Shack HTX-202 2m handheld with many extras*
2. Radio Shack PRO-2011 Desktop scanner*
3. Standard C861S VHF-FM Marine Radio
4. Midland 3-Channel CB radio with Ch.9 crystals
5. Sony 12-band Shortwave Radio*

The radios with a * are in MINT CONDITION, with less than 6 hours of
operating time. I got these radios as gifts and want to purchase the Yaesu.
This package was appraised by a local ham for $450, but I only want the $300
that it will cost for the new radio. Please e-mail me for further
information at lepard@sunline.net.

Thanks for reading this!
Carl, KE4ZCL

You all need to remember that Kenwood radios are great for other people to own. Do not make the mistake of owning one yourself! Kenwood does not stand behind any of it's products, and never did. I have worked a service bench for 22 years and Kenwood is notorious for not having replacement parts. I have seen Kenwood equipment less than 2 years old that had to be scrapped because a propiority IC was "No longer available". The last I heard, Yeasu's service department was doing Kenwood's warranties! That should tell you something. If they get the competition to do their warranties, and don't even have their own service department, how long do you think they plan to stand behind the unit you purchase from them? Unless you can find another carcass with a different chip out of it, and get a used IC, you have a $2,000 paperweight. Good luck, Mitch AE4YW

2492. FOR SALE: KENWOOD TS950SDX COMPLETE STATION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: n2ss@bellatlantic.net
Message-ID: <365d6e01.62882827@news5.bellatlantic.net>
Source record: 124801

I have a complete Kenwood station for sale:
Kenwood TS-950SDX
SM-230 Monitor Scope
MC-90 Microphone
IF-232C Computer Interface

Only reason I am selling is because I have too many radios. Besides the 950SDX, I have an Icom 781 and an Icom 756. Since I have an Icom amp, the PW-1, I have decided to stay with the Icom exciters. The TS-950SDX is absolute mint, works perfectly and I hate to part with it. I also have the SM-230 Monitor Scope/Spectrum Analyzer. The MC-90 is a dual head microphone and the IF-232C interface. All are in mint condition. I would like to sell the complete package for $3000 but if there is standalone interest in the 950SDX, then I will sell the other items separately. Thanks for Reading. Tony N2SS

> 73 !

I bought one a few weeks ago.

I was considering the 746, the Yaesu 847, and the Kenwood 570. The Kenwood is several hundred dollars cheaper, so that wasn't an entirely equitable comparison.

The test reviews I examined indicated that overall the Icom had the superior receiver. I spent a few hours at R&L Electronics fiddling with all three, but ended up spending more time with the Icom. I liked the Yaesu's jog tuning, but otherwise preferred the way the Icom worked. The front-panel layout is better, I like the larger size of the buttons etc., the twin passband tuning works very nicely, the bandscope is actually useful and not just a gee-whiz add-on, the DSP is functional but not overstated, etc. etc. The frequency calibration is right on -- within a few Hz at 15 and 20 MHz.

You can get a variety of options, all of which are easy to install yourself, so you can get them at a later time if you want to keep the initial cost down. For my operation, I've added the 1.9 kHz and 350 Hz filters in the 9-MHz IF. The frequency calibration and stability are so good I don't see any need for the TCXO.

Make sure you have a good power supply. I run off a battery. The Icom wants 11.5 V minimum, so I had to connect directly to the battery (bypassing my metering circuits and distribution panel and their attendant little voltage drops). I tried running it on my 20-A Heathkit switching supply (which powers another 100-W transceiver just fine), but it put an unacceptable buzz on my signal.

Having said all that, let me also say that choosing a transceiver can be a personal thing. You should try to use any that you are considering to buy before you make your final decision.

On HF, sensitivity is an almost meaningless term. Chose your rig
based on the receiver's strong signal handling abilities. You want
one with excellent phase noise performance.

2504. Kenwood TM-V7A to TNC ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: "Kline R. Wilson" <tennis@olypen.com>
Message-ID: <365D9430.5D73@olypen.com>
Source record: 124813

Does anyone have information on hooking up a Kenwood TM-V7A to a TNC via the data connnector? Neither the manual nor the Kenwood ftp sight seem to help much. Neither does the KPC-3 Plus manual.

I can't figure out what turns the TM-V7A to transmit (ie PTT) on the data connector.

Tnx

Hi,

One additional thing not clearly mentioned in the manual is that many functions (xband rptr among them) will not function from the "PM" mode. You must be out of the PM 1 - 4 modes i.e. in the PM VFO mode.

In general this applies to all modes that require a power off, since the PM modes overide your settings when power comes back on.

Also in the instructions it is not clear that you must turn power off after setting the bands, then turn power on in the special way.

I use xband and find it very useful.

2508. Re: FT1000D vs IC-781 - Anyone?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: MRR <PacificCommonwealth@SecuritiesDealer.com>
Message-ID: <365D986C.2714@SecuritiesDealer.com>
Source record: 124817

Dear Richard:

I own both a FT-1000D and a IC-781, having recently acquired the FT-1000D. I have had them on an antenna switching arrangement so that I could compare the receivers and they are comparable as to sensitivity and selectivity. The scope is really something that once you use it, you do not want to part with it. The Yaesu is better looking in my view and, until the recent advent of the Heil inline compressor/clipper ($50), had superior audio.

Aside from the scope, the FT-1000D is a superior rig because of the ease of operation. For example, if you switch from one band to another, the FT-1000D will remember the last frequency you were on (on that band) while the IC-781 adds the last three digits from the band you are on to the first two digits of the new band selected. This usually means it takes some additional time to get to the portion of the band where you want to go. I'm not a contester, but this could be problematic if you need to move fast.

For the money (they both run around $2,700 - $3,000 used), I would buy the FT-1000D. I guess I'm a sucker for looks. Good luck.

Message-ID: <365d9c4a.0@nntp2.borg.com>
Source record: 124818

If I understand the information that has been posted in this thread
for the past few days correctly, the V7A will do a "FULL" cross-
band repeat?
If so, what am I doing wrong. I'm only able to get it to do the
following;
signal on 2mtr rcvd -> and will be transmitted on 440, but when I
tx on 440, the V7A will not pass the received signal on 440 and
pass it over and repeat/transmit the signal on 2mtrs.
I would like to use a low power 440 portable packet setup and
have the TM-V7A act as a repeater and pass the signals to/from
a 2mtr packet node in the area. Is this doable, or not?

Page 80 of the manual has the brake out of each pin on the data connector for the V7A. Also, if you look on page 79 of the manual, you will find the settings needed for the V7A to operate in the packet mode.
Not familiar with the KPC-3s but I've used the information provided along with the PG-5A packet cable hooked up to a PacComm Tiny-2 with no problems.
Hope this helps,
Eric

Looking for recommendations for my new HF radio (DX-70TH) from my apartment. Considerations to include:

1. Antenna must operate on 20 & 40 meters.
2. Antenna must be collapsible so as to not be an eyesore when not in operation.

I am currently considering the construction of a dipole contructed from mobile verticals.

Thanks in advance for your response,

chuck
n7chs.

Sorry I don't have a prop pitch motor to donate or sell, but I would like to mention that they sure are awesome rotors. My brother had one in the 60's from a B-29 which was very slow but very sure. The thing probably could have rotated the house if we could have figured out how to get it (the house) on top of the tower.

The manual is far from clear on this. Page 80 does show the pinout. Pin 3 labeled PKS -- "Packet Standby" is the PTT pin. Pin 3 to ground puts the radio into transmitt.

For a normal TNC interface, pins 1, 3 and 5 are used.

cheers

I recently purchased a used FT-530. I am rather fond of it, and it's performance. I got one more battery than listed here, but paid $300. I wish I had seen this one first.

Hi Rick. I hope I am wrong but it has been long rumored that Kenwood is getting out of the hf market, at least on high end rigs. They have not updated the TS-50 as the competition has advanced. I gave up waiting for a replacement to to the 950SDX and bought a FT1000MP which I am very happy with.

2540. Re: Help with Kenwood TS-520S Cathode metering Resister

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: gjhnkn4sx@aol.com
Message-ID: <19981125191222.20915.00000747@ng128.aol.com>
Source record: 124865

Hello Marty,

It has been a while since I had my 520, but are you talking about the metering circuit or the bias resistors. I believe that what you are working with are the biasing resistors, but at any rate you can use two 5 ohm in place of one ten ohm. If it turns out that these are the biasing resistors, what will usually cause them to open is one of the finals is beginning to oscilate and both need to be replaced.

Good Luck

2542. wtb: Need Parts, Tubes & Documentation for Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01be18d6$af2bbde0$d08492d0@Bit-Net.bit-net.com>
Source record: 124867
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

Well, the so-called Emtron amp was delivered yesterday. Turns out that the name Emtron appears nowhere on the amp. Odd!

It is a 160-10m amp (though the bandswitch only shows 160-15 it is wired for and can switch in 10m).

It is labelled XR-3000D (There are sigma symbols on either side of the XR-3000D on the faceplate.) A tag on the back reads: Frontier Electric Co. Ltd. Tokyo, Japan on the back. The words SSB Linear Amplifier are in large letters across the front.

I need any documentation, parts list, etc. anyone has for this amp, please. I do have a small copy of the schematic, operation, specifications and layout portions of the manual.

I also need two replacement meter covers for this amp. They are TAMA brand, 3" high, 3 3/4 wide and 1/4" deep. The bottom 1 1/8" of the plastic cover is black with an adjustment screw toward the very bottom center and two mounting screws on either side towards the top of the black section.

TAMA Brand meters, for RF Amperes and Multimeter, look sorta like this:

```
-----------------------------------
| |
| |
| | <--clear
| |
| ..............................|
| O O | <-- mounting screws
| o | <-- black
-----------------------------------

/\
|
adjustment screw
```

I am also in need of a good used pair of 3-500z's, very reasonably priced new ones, or will consider a pair of 3-400z's. (Will consider a trade including some mix of cash, a Mosely TA-33 triband antenna, or perhaps one of my KW antenna tuners.)

Thanks for any help!

Silly me! It was a Dentron DTR-2000L I was looking at earlier that doesn't show 10m! This one has 10m on the face. It's a Kenwood TL-922 clone, sort of.

>---Thanks!---
>Rick, N1SQJ
Hello Rick;

I have used both the IC-781 and FT1000D and own a 1000D. Both are great radios and there are endless debates in our local DX club as to the advantages of each.

If you leave the spectrum display out of the discussion I think the FT-1000d is clearly the better receiver and I think the ARRL lab review supports that. If you include the display there are clear advantages for the contester and DX'er in the ability to "see" the pileup in split operation as well to check new signals as they appear on the band. Its also handy to see if there is room to QSY up or down a bit when a"SUPERSTATION" 6 running about 3KW slides right next to you.

There is some question about the cost of replacing the scope should it fail. You might ask ICOM the availability and cost of the replacement scope.

I am running the 1000D with a Timewave DSP and have not found anything on the market to replace it.

Well, to me this sounds like an undeserved slam on a guy that seriously wants to trade his old computer/packet gear in for some HF capability. What's wrong with that? Since the reply to that message really strains credibility and smacks of sarcasm, I have to assume that this posting pushed some emotional hot-button. I haven't a clue as to which one however...

2557. In deep trouble with IC706.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-26 00:00:00 UTC
From: Siddhartha Bhattacharjee <siddhart@delhi.cig.mot.com>
Message-ID: <365CEBAF.CC7B8AA2@delhi.cig.mot.com>
Source record: 124882
Body handling: Binary attachment payload not displayed: vcard.vcf

Dear friends,

I am in deep trouble again with my year old IC706(pre MarkII model).

Last time on unpacking the rig, the FM was not working and later it was found to be a dry solder at the ceramic filter terminals.

This time the rig does not get powered on. On depressing the Power switch, the relay charges as it should normally do but immediately releases the relay thus powering it off. I could see the Fan rotating for a brief period on depressing the power switch. I have checked the following just by removing the top and bottom covers,

1. The power supply voltage is OK at 13.8V. The Drains of the MRF255s have this voltage unswitched.
2. The unswitched +5V is OK on the PLL board where it is derived for use

at Main board and elsewhere, particularly for the CPU there.
3. All fuses are intact.
4. The POWS signal which controls the Power ON relay may have a problem.

As I could notice that on depressing the Power switch, this momentarily goes to Logic HIGH but instead of being there it comes back to logic LOW. I do not know what other situations can force the signal low. I could not locate the transistor to whose collector the relay is connected.
5. There was no loading on the supply voltage when Power supply relay closes momentarily on depressing the Power ON switch.

There is no Icom service centre in India and this is my only rig. I am at a loss as to why this rig should have so many problems within first year of use. Please help me as I am off the air for quite some time now. Thanks in anticipation,

Sid, Radio vu2sid
Calcutta, India.

I live within driving distance of Henry, and have done a bit of business with
him....

He built two repeaters for me, a 2 meter and a 440 mhz... both worked well.
He has built repeaters for a couple of friends, all work well...

I have seen his work and what I have seen is of high quality....

I wouldn't hesitate dealing with him again...

Of course, this is MY opinion, and someone else's may be different....

I suggest you continue to ask around.

KM4IY

2570. How much better is the Icom 746 than the 706MkII w/DSP?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-27 00:00:00 UTC
From: Tom Norris <badger@telalink.net>
Message-ID: <SqD72.1637$tB2.3825803@news2.atl>
Source record: 124645
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,alt.ham-radio.hf,alt.ham-radio.ssb

Already have a 706MkII with DSP, and seems to be a great radio.
Use it for ham bands and SWL, the narrow SSB filter is a must.
BUT how much better is the 746 than the 706MkII? I know both
have DSP (well, mine does after I added it) and the 746 is a bit
larger and puts out more power on two meters. How do the
two receivers compare?

Can the IC-746 be modded for out of band TX? (no, not for CB!)

What other benefits are there to getting a 746 instead of another
706MkII (or a MkIIG when/if it comes out soon)???

Thanks

Yep. I drive an '88 Accord LX. Still runs. :-)

In 1994 I put my Icom IC-3230 under the dash (under the ashtray) and routed the DC cable through the firewall right to the battery. I have been running a Larsen 2/70 mag-mount with it. The car does not care or notice that the radio is in there.

My originally installed AM/FM/Cassete deck does not seem to be disturbed by it either. I often have music on in the background while riding/chatting.

I never did have any luck with my portable (externally connected) CD player though. Every time I'd transmit, it would blow the buffer on the CD player and I'd get no music.

ok, if your reading this its because, your curious about whats going on, or your worried about buying from me. so im going to take a few minutes to try to clear myself of whats going on...

i have sold many items on this NG, i even helped someone else get merchandise out that they had sold but couldnt ship due to car problems. some of my customers have already spoken up and said they have had no problems. i hope those that have purchased from me will continue to speak well of me since word of mouth is the best advertising there is.

as far as this individual(s) is concerened, i have no idea who you are or what your reason for doing this is. if you think i have ripped you off and have sufficient proof then I will provide YOU with the following numbers to call and have me arrested, postal fraud is a crime is it not? FBI miami feild office....305-944-9101 metro police.....305-595-6263 US postal service.....305-599-1789 if i did cash your MO as stated in your various malicious emails, then my account number and signature will be on the money order. keep in mind, what your doing is lible and i intend on pursuing this to its full extent.

thanks for your time
robert cruz

I would be interested in hearing from people who have implemented an emergency power, or backup power scenario, to ensure operation of their ham equipment during times of non utility power.

I am looking for application of generators, batteries, solar, hydro etc., or any other effective means. Specifically I would like to hear about what you did, how it is working, and what you might do differently if you did it again, or over.

I have implemented various methods myself. The subject fascinates me, and I would enjoy seeing what others have done. Specific details and scanned photos would be great.

Anyone who could furnish URL's on the subject would be appreciated.

Thank you.

Louis

Message-ID: <365F38AC.C28D6349@purdue.edu>
Source record: 124665

Hi,

Thanks for all the inputs regarding dual band HT recommendation.
I have narrowed down to 2 HTs: ADI AT600 and Alinco DJG5TH.
I heard a lot of good things about Alinco including the dual in-band
rcv,
std BNC antenna, nice drop-in charger, regular 12V input jack, etc..
How about ADI's AT600? The features on this HT look even more impressive

than Alinco. Will it also outperform Alinco? Does anybody have
experience
with these 2 HTs? The price is currently about the same for these 2 HTs.

Regards,
Hendra

THere must be an old timer out there who can tell me what this is: It says T.R. McElroy Boston Mass on the label, and Radio Telegraph Apparatus. It's a slant front case, made out of bakelite or plastic. There are two volume type controls on the back, one slide switch on the back, and a couple of screw terminals.
I know McElroy was a speed key guy. But what is this thing? I doubt it's a keyer, too early, but seems a bit much for a key monitor.

I've put a couple of picture on my web page, if that will help.
http://www.waterboro.com/mcelroy1.jpg
http://www.waterboro.com/mcelroy2.jpg

I hope someone can identify it.

Source record: 124671

BE CAREFUL- the software mod forces the radio into the european band plan.
Do it right and pull the diode.

Remove the battery
Remove the NiCd sticker
Loosen- don't remove- the two screws.
Push on the screws, forcing the keypad out.
Remove the screws.
Sit all aside.
Look where the keypad used to be- on the left side, there should be three
solder pads with a row of diodes above.
Remove the left solder pad to give you extended RX
Remove the far left chip diode above the solder pad just removed.
Reassemble

Reset the CPU.
Select the 144.0 VFO
Hold down Knob+PTT+Lamp while turning on.
This should bring up the "BaND A1" menu. If you have a first or second
generation radio, change this to BaND FrEE to give no holes access. If your
radio is too new, you won't have this option, and will be stuck with holes.
TX mod is enabled by the solder pad.

Let me know if you have any other questions.

Terry

Go measure the draw of the radio. Some of the Yaesu's had a problem with pulling way too much power from the battery- on the order of 70-100mA. I believe that the cure from Yaesu is free.

>

I have a 1998 service bulletin from Chrysler Motors that specifies NO
fuse in the negative power lead. They give one good reason for this.
If the negative fuse blows and not the positive (age, heat or vibration)
then the entire negative current could go threough the coax shield. If
it's not up to the current task, smoke and/or flames could result. The
only real reason to run the negative lead to the battery is to ground it
as close to the negative battery post as possible. In a negative ground
car, almost the entire car chassis will be at the same potential as the
negitive post of the battery. If the radio draws too much current, the
positive will blow. If there is a short (almost not possible on the
negative lead) the positive will blow. Can anyone give me a cogent
reason to fuse the negative lead. "Because the ARRL Handbook (IMHO
incorrectly) says so" is not a cogent reason. Can anyone name another
circuit in an automotive accessory circuit that has the negative lead
fused?

Tony and all,

I can only refer you to Chrysler Corporation Service Bulletin no:
08-16-98 Date Arp. 17, 1998. It recommends attaching the positive lead directly to the battery and fusing it as close as to the battery as possible. The negative lead should be made to the body sheet metal adjacent to the negative battery connection.

I still don't see any reason to fuse the negative lead and I don't see any reference to any other accessories with both power leads fused. I've installed many high current devices this way.

Andrew;
I made this same decision a couple of years ago. What made me decide on
the FT-900 is the fact that the built in notch filter is in the I.F. section
on the
'900, while the '450 uses an audio notch filter. Your AGC will continue to
'hang' on stroing carriers with only an audio filter.

Don -

Midland made adapter cards that interfaced the 70-1000 to the other
(non Syn-Tech I mobile) Eprom cards.

These adapters are scarcer than the 70-1000

I have the same radio, nice rig in my estimation, on ssb that is all
the meter reads but keep in mind that ssb meter readings are not that
accurate, on cw i get 120 out, check it that way,.
Good luck

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. I will also through in a ICOM 27 2 meter rig with tone board and tone mic, and a KPC 2 TNC. If you have a TS 520 or TS 820 both with mic I will trade just the computer. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,

I doubt if Uniden would be able to repair the old Bearcat scanners even if they wanted to. The BC-220 and BC-250's were made back around 1977-1979. That is back when Bearcat was owned by Electra. They used alot of custom components in those scanners. That was almost 20 years ago!! There is NO ploy to force anyone to change radios here.....sorry, I just don't see one anyway......73 CUL de Todd.

Trying to figure this one out. An IC2100H is $190 new, about $150 used. The 28A is 3 generations behind it, half the power output and you're asking $175. What am I missing? Is it dipped in gold? NO! thats silly. I got it. You're including a 20 amp power supply , a colinear antenna and a linear amp to get 80 to 100 watts out. Right? That package would be worth about $175.

Hello Todd & Jeremy: Yes I understand the issue of custom parts and the logistics matter. I have a top of the line Bearcat 300, and a Rengecy scanner that will never be able to be repaired, due to Unidens lack of repair support for these older scanners. Do you really think Uniden made a market strategy decision to buy out Bearcat and Regency to help out the electronics consumer. Yeah good call to hind behind the 7 year old support law.

Bitch and complain, you bet. But I will never buy a Uniden product ever again.

Jay at jay123a@ptw.com .... In the Great Mojave Desert, hust down the road ah ways from the fillin station.

Hello
Thanks for reading. I have a dentron 160 10L amp. I want to replace the tune and the load capcitors. They have become teardroped and in need of replaceing. I don't know what the capcitace of these varible caps are. Dentron just gives them a in house part number, and they are;
Plate cap is a D-232 plate cap
load cap is a D-1500L load cap
I really would like to know where I could get these caps new.
Thanks for reading

I have a very nice condition, TS 940 SAT, with SM 220 and BS 8 for sale.
The 940 has the CW and AM filters included. Radio comes with original
boxes, manuals and receipts. The serial number of the 940 is 9050202.
Asking $1200 US plus shipping
Regards. John VE7RCS

ICOM of America has always been helpful to me when I've requested MARS modifications. Just send in a copy of your MARS license and they should help.

Otherwise, some joker on the web might suggest that you cut a trace or crush a diode, which might ruin your radio and void your warranty.

Hello Jay......to be honest with you, I wondered the same thing 10 years ago when Uniden bought Bearcat and Regency myself. I remember the BC-350. I think it came out around 1980 or so, however I may be a bit off on that. There's no doubt that they definately have a large share of the police scanner market, if not a monopoly. I used to think Radio Shack was a competitor, but it looks like most or all of their scanners are made by Uniden now too. Mine is, I have an old Radio Shack PRO-2026.....I've had it for about 4 years now. Have a great w/end......73 CUL de Todd.

Andrew, Congratulations on passing your test and getting your ticket!!!
:=)
To answer your question, I'll have to agree that the Yeaseu HT's are
probably the nicest dual-banders on the market. I like the FT-51R
myself. I don't own a Yaesu HT. I ended up with an Alinco DJ-G5TH. It's
a really nice HT, it works great. I have a problem with Alinco's quality
control. I've had 2 Alinco HT's.....I had a DJ-580T for about 5
years.....I loved them both except for that they both had to go to
Alinco for repairs. Fortunately, Alinco has a great service center and
their turn around time is 2 weeks or less. I'd go with the
Yaesu......Good Luck with your choice. 73 CUL de Todd......KB5TMD.

Source record: 124767

I have the following items for sale:

maker description model price
comments

sony audio/video STR-AV300 $35
right speaker output does not
receiver
seem to work properly,
everything else seems to
work properly

pioneer 6-disc changer PD-M500 $45
tried it and works!

sony dual cassette TC-WR720 $35
tried it and works!
player/recorder

panasonic vcr PV-1366
$25 pretty sure it works

pioneer 6-disc changer PD-M401 $40
tried it and works!

sony dual cassette TC-W233 $20
tried it and works!
player/recorder

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals and remote if I can find it. All are in that Eighties electronic black and have a digital display exept the TC-W233 which was my very first audio component back in 198--something :) anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

sir
IVE PLAYED WITH BOTH RIGS
ON THE AIR AND THE KENWOOD
TS 450 IS A HANDS DOWN WINNER
BETTER NOSIE BLANKER.. BETTER FILTERS.. HOTTER REC.. THE 450 WILL TURN UP TO
150 WATS WITH NO PROBLEMS .WHERE TO 900 DIDNT
LIKE 150 WATTS
I SOLD MY 450 AND GOT A 950SDX
THE 900 IS JUST A REWORKED FT-890
WHICH THE 890/900 ARE GOOD RIGS
+++++++++BUT++++++++++++
THE TS-450 HAS MY VOTE I OWN A 690 NOW TO MATCH MY 950SDX
WHICH IS A 450 WITH 6 METERS

I have owned both of these rigs (actually, I had the TS-690SAT which
was the 450 with 6 meters). The 900 is more immune to front end
overload. I live very near a bunch of 25 kilowatt FM radio stations.
My 690 was unusable on 40 meters since all it heard was the distorted
overload from these transmitters. The 900 was quiet, immune to
overload, and could be used on all bands. That said, the 690 had
much better audio. I also dabbled in shortwave listening and liked
the Kenwood feature that allowed you to choose the filter bandwidth
independent of mode . I could therefore choose the 690's 6 kHz filter
in SSB mode for high-fidelity listening to shortwave stations.

If you are in a city surrounded by commercial radio stations, I'd go
with the Yaesu. If you don't have this problem and prefer higher
fidelity audio, then, go with the Kenwood. If you're going to get the
Kenwood, try to find the 690S with the antenna tuner built in. You
should pay about $950-$1100 for this. The 450SAT (which comes with
the antenna tuner) should cost no more than $850.00. Without the
antenna tuner, pay no more than $650-700 (since it will be difficult
to find the tuner separately).

Someone e-mailed me the mod for the Yaesu FT-8000 about a year ago and did it on my rig and it worked great. I purchased another one of these rigs and can't remember how to open up the 800MHz recieve.

If you have the info to fully unlock this rig please e-mail it to me at jim@futurevision.net

Thanks in advance Again,

Jim -KA8ZGP

2675. AllowAnyBand mod fix for VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-27 00:00:00 UTC
From: jake@trib.com
Message-ID: <365e35fd.2201119@news.trib.com>
Source record: 124784

After I installed the AllowAnyBand mod and put in some UHF freqs in the VHF band, I found that I could not transmit using repeater splits on the UHF freqs. To fix the problem, rather than use the "Minus or Plus offset" under "Transmit Offset" I used the "TX Frequency" option under "Transmit Offset" and manually entered the TX Freq under "Frequency". This is under the "Edit Group #" screen. Both your Plus and Minus indicators will light on the radio and under the "Group 1" or "Group 2" frequency lists for the frequencys where you have used this mod. I'm using the latest firmware and the latest software, don't remember the versons offhand.

Hi Jim,
I have the Comet HA-CV on my mobile and my buddy has the Diamond MV-3A. Each of us bought the different one to try it out. He has multiple antennas on his car and runs an Alinco DX-70TH. At first we had some problems with the 2M and another antenna interacting with the antenna. We removed the other antennas and started again. We tried tuning the antenna for the intended bands and got everything in except 6m without cutting anything. We tried and tried but couldn't get 6m to tune. He finally called Diamond and they said "Oh, you need this kit and it is $3.75 plus shipping (or $ close to that anyway). He ordered the kit. It was a short piece of stainless that fits in the horizonal mount and you cut that to adjust it. Now seems to be working fine. I found it really unusual at the time to say that the antenna is supplied with 2,6 and 10 meters and then need a "kit" to tune it.
I have no idea where you are mounting this antenna, but make sure it is grounded well to the body/frame. I took a piece of sheet stock brass and cut some about three quarters of an inch wide and six inches long to fit under the trunk lip mount (Diamond K-400C). To that I soldered a length of braided ground cable that connects to the body under the hood. This does actually a few things. One, it makes sure the antenna has a good ground all the time. Two, it keeps from scratching up the paint on a new car. Three, it helps keep the allen screws from leaving those "dimples" in the outer surface of the hood. I am a manufacturer's rep for a car company and drive new cars all the time. So, I guess number four is it keeps the company off my back also.
It is really strange to have two antennas from two different manufacturers look so much alike. There are only some real small differences between the Comet and the Diamond versions.
BTW, I saw a guy at a hamfest a couple of months ago running two HF bands on the horizonal part. I may give that a try with the analyzer and see how it works. 73 de N3WJA

Andrew. I had a TS690 which is a great rig, but here is another suggestion to consider. Forget both of the rigs you mentioned and beg, borrow, or steal a couple hundred bucks more to get a Kenwood TS850. There are a lot for sale these days on the rec.radio.swap for $1000 or less, and it is a much better radio (I own one currently along with my FT1000MP). Good luck! --- Steve KK9ZZ

I've done numerous installations of UHF radios and have always fused both the +/- leads as close to the battery as possible. Not _once_ have I ever had any problems with this setup. Others I know have also done this and have never experienced any problems either. I'd be curious to hear any cases where those misfortunes happened because of fusing the negative lead.

I suggest that he use the question pool in conjunction with any books written
by Harry Lorraine or Tony Buzan. He will be able to ace all of the written
exams up through extra class. -- Tom - N8ECW

I have large transformer & Powerstat I'd like to sell. I'm not sure what the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

There is one big reason to fuse the negative side if it is tied straight to the battery. One cable connects the car frame to the battery, and the starter is connected to the frame. Suppose the cable gets cut- the only negative source would be down the negative cable, through your rigs, and through the mounting hardware or the antenna to the frame. Needless to say, 150 amps getting pulled through a radio and antenna is not such a good idea. If you connect the negative side to the frame and the cable dies up front, everything croaks, but nothing gets fried.

>gives, anyone.......help!

Some FT-50s have a problem with excessive current drawn from the battery
when turned off. Measure battery current with an ammeter. It should
be maybe 40 mA when on (depends on battery saver settings) but well
under 1 mA when turned off. If it's several mA, your FT-50 has
the problem.

The fix is changing a pair of resistors. Apparently Yaesu will do the
repair if you send the radio to them, or they'll send you the resistors
if you want to fix it yourself. Be warned that replacing the resistors
involves disassembling the radio to the point of separate circuit
boards. I wouldn't try this unless you already have some experience
with replacing surface-mount components.

Thats normal in the UK and other places using similar codes, but not in the US and (I think) Canada. Here the neutral is carefully grounded at the entrance panel of every building. In practice there is almost no difference (either electrical potential or other distinction) between the neutral and the safety ground except that no current is supposed to flow in the safety ground other fault current. Further, I think that the US code requires that the building safety ground and any other grounds, such as the ham shack RF ground be bonded together. There might still be a difference between the neutral at a given outlet and the ham shack RF ground, but it should be very small.

Second that. I bought a Samlex 10A 12V supply. Was junk. Had to
redesign
the electronics, change the fan, redesign the cooling airflow paths,
etc.
Works good now. It's for sale for $40 but it's in Portland, OR.
Too heavy to ship.

Source record: 124556
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hello all!

Looking for programming instructions on a Regency RPH-410 handheld.
It's an older VHF handheld, 10 channels, LCD display, incandescent
backlight. 16-button keypad with 0-9, *, #, PRI, RST, SCN, RVW.
Takes an 11-volt 600mAh NiCd battery and the official label is
"Serial No. RPH410 12---" and "FCC ID: ARU9ZARPH410 Regency Electronics
Incorporated Made in Japan".

I have found a couple of toggle switches inside the radio on the
uP board, but I don't know what they do. They are both 2-position
switches. The radio works just fine now for both recieve and
transmit, for the frequencies that are in it...just wondering if
there is a way I can reprogram it. I'm on the local volunteer fire
department and they have assigned the radio to me; channel 1 is our
fire department channel and the next few are OK but I need to
reprogram some of the others.

Any help, tips, etc would be greatly appreciated. Thanks!

Matt Roberds

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,alt.ham-radio.marketplace,alt.ham-radio.hf,alt.marketplace.books,rec.radio.amateur.boatanchors

They don't make the paper Callbooks any more, but I have a couple
available. Two are almost like new; the others are used.

1994 North American $ 14

1991 North American $ 14

Both of the above are "like new," left over from when we were selling
them new. They have been opened up, but that is about it.

1985 North American $ 9

1990 North American $ 8

1990 International $ 8

1990 Supplement (includes both US and DX) $ 3

These have been used. They show their use, but are not "beat up" or
damaged.

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Chrysler seems alone in taking this position. It should be noted that every
radio manufacturer insists that you fuse both the positive and negative leads.
Most ship a cable with both legs fused with the radio. GM's installation guide
gives the same advice, as does the Handbook.

Now there are two parts to the reason for this. The first part is why connect
the negative directly to the battery instead of to the body sheetmetal? The
reason in two words is *ground loop*. The current from every other electrical
load in the vehicle is carried by the same sheetmetal and wire to the negative
post as is your radio negative when you tie the negative to the sheetmetal.
As those load currents vary, an IR drop occurs across this path which
effectively modulates what your radio considers to be its common. That
modulation then shows up in all of the radio's circuits as a noise signal.
So you get alternator noise, fan motor hash, hash from the ignition system
and EFI solenoids, etc, all being expressed across the sensitive circuits
of your radio.

In a communications radio, even microvolt signals are significant. A
common path resistance of only 50 microhms is sufficient to modulate
the radio common with one microvolt when 20 amps of current is being
switched by the vehicle. The actual resistance in this path is usually more
on the order of 50,000 microhms (0.05 ohm), so modulation of as much
as *1 volt* can occur in the radio common by a switched 20 amp vehicle
load.

To avoid that ground loop, the radio manufacturers tell you to connect
directly to the negative post of the battery. This eliminates as much of
the shared current path as is possible, and reduces the modulation of

common in the radio. But there is now a potential hazard. If the cable from battery negative to the engine/frame should fail, full starter return current may be forced to try the path through your antenna ground, the coax, the radio, and back down the radio negative lead to complete the circuit to the battery. This path isn't sized to handle 150 amp starting currents, so a fuse is included in the radio negative lead to protect this path in case the battery negative cable fails. That's why there is a fuse in the negative lead.

Now if the negative fuse were to open, it is true that radio negative would have to return to the battery via the coax and the antenna ground to the vehicle body. But there is no danger of smoke and flame due to this. In the first place, RG8 shield braid is up to the task of handling rig currents, unless the rig is a 47 kW CB amp, and in the second place, if the path presents a high resistance, it will automatically limit the current draw of the radio. The symptoms you might actually see would be a dimming of the radio panel lamps when you transmit, less than normal transmit power indication, and large increases in vehicle electrical noise in the receiver. Any of these indications is sufficient to cause you to check the negative fuse.

ok both units are good i like the ft100 myself but would not use it as a mobile
i would recomend the alinco dx 70 th and a alinco dule
band rig for the simple reason putting all your eggs in one box can hurt you if
you have a short or get hit by lightening your dead with 2 rigs chances are one
will survive also you cant crossband or duplex on those rigs
please respond only to skramer@bigfoot.com

<SNIP!!!>

Gary, thanks for the information. I've read a lot of car makers'
comments regarding mobile transceivers in their cars and practically
95% of them inform the installer to fuse both leads. I honestly don't
remember what Chrysler posted, but since I do remember most of the
manufacturers advised to fuse both leads, and both leads going to the
battery, that was good enough for me.

>John ve3sjv

Your choices for VHF/UHF multimode radios are:

TS790A
IC821H
FT736R

I wouldn't wish a TS790A on my worst enemy (had one, it's a
disaster). The IC821H and FT736R are Ok. I recently sold
a FT736R. These are big radios, and they don't have remote
mount kits. I'd suggest that they are only suitable for large
campers as mobile rigs.

But if you consider a HF/VHF/UHF radio, you have other choices.
They are:

FT847
FT100
IC706 MkII G

The first is currently available at an attractive discount (free antenna
tuner or free screwdriver mobile antenna), the latter two are supposed
to be out by Christmas, or first quarter 99. The Icom offers a remote
mount kit for vehicle installations with limited space. I have a FT847
and like it, but it is a tad large for today's cramped vehicles since it
doesn't have remote mount capability. I also have a IC706 (not the
new one, but they're physically the same). It is a cinch to mount in
even a cramped mobile. I've played with a prototype of the FT100.
I'm a bit underwhelmed by it. It is a bit awkward to use compared to
the IC706, but HF receive seems a bit better.

Mirror mounting is undesirable since it doesn't supply a proper groundplane
under the antenna. Better for VHF/UHF is a center of roof mount (magmount
or drill the hole). For HF, a bumper mount or low body mount is best (forget
magmounts here, drill the holes).

Please,
From your description, it sounds like a homemade 0-135 volt / 10 ampere variable isolated ac supply, with possibly a dc section also. More information needed: are there diodes and capacitors inside (dc section), what are the meters marked, and what are the current ratings on the transformer and the powerstat?
It's use was on a test or repair bench to start equipment gently, to isolate/float the tested equipment away from the ac line neutral wire, and to test equipment above the rated 120 volts for UL/reliability checks.
It's current value for new items can be found in Allied's catalog; just guessing at $300. total for the two big pieces. The transformer and powerstat are rugged and normally don't fail, but other parts may have gone bad.
Shipping weight is about 50 lbs, no? What is your shipping address?

Regards, DLR c/o Topper

I have had my FT-530 and cannot complain one bit. The radio has been on a
100,000 ft ballon ride and been everywhere with me and worked great. I love
the features and it has treated me great.

Source record: 124578

From the QRZ site at www.qrz.com , in the MODS section, you will find:
(for this mod, specifically: http://www.qrz.com/mods/tmv7a.txt)

From: [see original article]
Date: Sat, 31 Jan 1998 22:25:46, -0500
To: editor@qrz.com
Subject: Mars/Cap mod for Kenwood TM-V7A

Remove the top and bottom covers and the detachable
face holder. Look at the p c board that is vertical behind
the front of the radio. There will be 2 small chip resistors
on the left side of the board. Carefully remove the one
with the number 0 . It will be the one closest to the left
near the grounding spring. You will probably have to scrape it off
with a pair of needle nose pliers. After you remove it
the TX should be VHF TX 136.995 - 173.995. RX should
be 118-174. UHF TX should be 410-469.995 RX should be300-470.

I have performed this mod and it works well.

cheers

Rick W4RP

Please,

Yes, inverters can be distorted waves, noisy, etc. But they're so cheap now that the best way to find out is just to try one, with a cheap scope to start. Scopes don't draw much current, so a 200 W inverter should suffice. Another possibility would be any computer UPS that runs from 12 V of battery power, and they're commonly 400 watts or better, and cleaner. Most companies and folks just discard them when the batteries go bad, which is the most common problem, so you often can get one just for carrying it away.

I have large transformer & Powerstat I'd like to sell. I'm not sure what

the application is, but it looks like it is a "home-brew" variable power

supply. It is all attached to a panel with 3 volt meters, a 110v outlet,
a
positive and negative connectors and a large dial. Can anyone one tell
me
what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x
6"D.

label info: As Isolation - 1 kW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

I would expect to see a voltage between your station ground and your station
NEUTRAL.
as the neutral is earthed at the centre of a star-transformer (three phase
distribution transformer) and possibly all along the distribution poles
there will be a potential difference between the last 'earth' point of your
neutral and your station earth.
depending on your house earthing system.. i would certainly _NOT_ connect
neutral and station earth. IMHO

2764. Amateur Radio Mailing Lists

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-28 00:00:00 UTC
From: jpoulin@honk.org
Message-ID: <73pecvepn1@nnrp1.dejanews.com>
Source record: 124602

Greetings,

I would like to inform all Scanner Listeners, Amateur
Radio Operators, & Communication Hobbiests of three
mailing lists that caters to these topics!

* scanner
* antenna
* ham

Our Mailing lists have been active for over 1 1/2 years.
Participants share a common interest in communications.

If you are interested in joining any of our three mailing
lists, simply visit the following website for further
details.

http://www.honk.org/ham/lists/

I would also like to stress that these lists are closed,
therefore only people on the lists can post to the lists.
All email address information is classified, and is not
available to the general public.

I use an authorization code system, so only you can
be added to the list of your choice. This filters out
unwarrented subscriptions, for your convenience.

You will be validated right away, and added to the mailing
list of your choice.

If you have any questions, please feel free to contact me.

Have Fun, and I hope to hear from you!

73's

James Poulin
VA3JPX

2765. F.S. ICOM R7000 SCANNING RECIEVER

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-28 00:00:00 UTC
From: hartbeat@greenepa.net
Message-ID: <73pgp2glc1@nnrp1.dejanews.com>
Source record: 124603

Icom IC-R7000 scanning receiver. 25 mhz--2000 Ghz, 100 channel auto memory. This is the legendary original (with vacuum fluorescent display, not the cheap LCD type). This unit is of extremely high quality. Excellent/Next to New condition, with the original box, packing, power cord and owners/operator's manual. For the radio enthusiast with deep pockets. Serious inquiries only. $1000.00 shipped CONUS.

Instead of wasting your time writing about your misfortune with UPS to people
on the NG that doesn't care, why not complain to UPS?
I have had tons of equipment shipped via UPS and only once was there
a problem. I filed a complaint with their customer service department
and the next day they had a rep at my home taking the report and within
a week the problem was resolved. Of course, conduct yourself in a
professional, business like manner. Don't give them the impression you
are a mentally arthritic individual with the personality of a wet dish rag.

Walt.

I know it is easy to vary the intensity of the 756 display, but does anyone know of a way to vary the color saturation or even modify the color?? I suspect the color is fixed in the chip rom but hopefully this assumption is incorrect.

Hello Louis;
and to all who will read. My station is totally off the grid and has been for
quite some time. I use a 75W solar panel on the roof, thru a charge controller
and then to 3) deep cycle marine batteries (12V) wired in parallel. If necessary,
I have a 3.5KW generator in the shed with an outlet wired into the shack and also
a standard DC battery charger which will power up the batteries as well.
I run an Alinco DX-70 all band X-Mit HF radio along with a Kenwood TS-430S
also set up for all band X-mit. I use a Kam + tnc and a Johnson Nir-10 DSP
unit. On the VHF side for packet I just use a radio shack handheld into a
discone on the roof. The computer is an older 286 laptop and works fine for
VHF and for HF. I have a small inverter as well if needed for the computer.
My system adequetly powers the HF and VHF radio's at 90% standby
(squelched) and 10% X-mit. One HF radio is on 24hrs a day, The Tnc and VHF
handheld are also on 24hrs a day. As long as I run the laptop off commercial
power I do fine. When I run the laptop off the inverter, then I have a power defecit
which needs to be made up with the battery charger or generator. I also use a
100amp A/C load center breaker box modified for DC with breakers to all the equipment.
The system works great and even up here in N. Michigan the panel usually
does the job just fine. The only thing I want to add is another panel.

Hi
I'm a newly licensed amateur, looking into buying a handheld.
I was wondering since their are so many units out their if anyone could
offer help in what to look for in a Dual band 2M/440mhz Unit.

Also what accessories should I look into
purchasing for better operation, antennas,mikes,Batteries,etc..

I want to put together a worth wile package ,for my christmas list, that
will enable me to start transmitting under the best circumstances come
christmas morning, not having to wait till next week to buy the right
acessorie to get the job done.

Thanks

> Regards, DLR c/o Topper

I think you may be right YI have large transformer & Powerstat I'd like to sell. I'm not sure what
the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

I think you might be right Topper!
The DC section has no caps or diodes, just 2 wires + / =. The meters are marked, 0-30 dc, 0-150 ac, and 0-2 (4a handwritten on face). Current ratings for both units are 115 vac each. The total weight of all combined I'd guess to be around 30-35lbs. I'm located in Troy, Ohio 45373 for shipping purposes.

Thank You!

-ERIC

2785. Spray in the AOR AR7030 Encoders !!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-28 00:00:00 UTC
From: davez <davez@ticon.net>
Message-ID: <73qm6s$l8k$1@galileo.ticon.net>
Source record: 124642
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

Hello to all,
A few comments have come in (from my web site) about the "Encoder" Spin Wheels in the AOR AR 7030 receiver MAYBE being damaged by contact cleaner ?? This could very well be true with many cleaners on the market.

These Bourns encoders are made of plastic, and I will agree that some of the contact cleaners in the market place will destory it ?.

However , I'am going to try the DEOXIT D100 spray. This spray contains NO solvents, and will not harm plastics. Please note that not all Dexoit products are this way. In spray form ONLY the D100 is !!! I still have not made an order as I have unable to find a place on the web that sells it. So going to order it directly from Caig (part no# D100S-2) about $ 12.95 or so(plus shipping and there is a surcharge for orders under $ 50.00). Also the D100 spray (from what I read in the Caig Spec booklet ??) is a short burst, a metered spray. So it's not a BaaaSwooch of spray comming at you. So less of a chance of the pressure of the spray damaging the whiper contacts in the encoder ?? This one we will have to see for sure ?? You are going to need some pressured spray to get the D100 into the encoder, as you only have a small crack (and I mean small) to work with.

So a bit of a Warning, be very careful on what you spray on this and ANY plastic controls, as it could very well destory it ??

I will be trying DEXOIT D100 before I have to replace the encoders (I have replacements ready just in case), as this is a Job for sure !! I'm not saying that the spray will do the trick...we have to see ??

If you have not already seen the picture of the tarnished "spin wheel" encoder (tore apart), I still have it up on my web site...

cheers,
davez

I have an extra Conner MS4000DAT 4mm DAT tape drive I will
trade for a 6Mtr. radio or HF radio with MARS mod.
The tape drive is an external SCSI 2 drive that will hold 2 - 4 Gig. of
data.
Included with the drive I have a Adaptec 2920 PCI SCSI card,4 Tapes
,cables and software for Win95.
The drive sells new for $800 alone.Looking for something in the $600.
range ?
Works great with the backup program in Windows NT or 98 also.
Email me if you have a question on the drive or an offer.
Thanks

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works.. xxxxxxSOLDxxxxx
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501 xxxxxxpendingxxxxxx
COLLINS T217 gr/r27gr/md125agr reciever and transmitter
for 200-399 mc AM military/Faa was at the Lubbock
Faa tower

Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

make any resonable offer to

I have a set that I am thinking of parting out
it is a COLLINS T217 - R 278 series.
I believe that this particular set came from the Lubbok
FAA control tower.
The thing is built to withstand a fall <IMHO> It tunes from
220-399mhz, and is AM only. I do not know the
actual output of the xmitter, BUT the chain goes
as follows.....
6v4 <X2> into 2c39 into 2c39 into 4x150 <x2>
This unit comes with the matching power supply
and the cabling to make it work together.
It will do whatever <150 watts carrier I believe>
all day, all night and into next year. This is VERY
heavy, and I WILL NOT SHIP. IT will be for pickup
or delivery in 200 mile radius of North Ft Worth TX
and available until 11-25. IF I get no resonable offer
I will part the unit out.
I do have some brief diagrams of the unit, and the
schematics are on the sides of the perspective
units. I am sure that because of the era, the reciever
sensitivity is not the best it could be.

I will entertain best offer OVER $150 plus gas money.
There is at least 150 dollars in the 2c39/4x150 and
sockets/chimneys. Not to mention the SUPER heavy
duty power supply that could be built from this unit.

I can be reached via email at
km5rt@ticnet.com

thanks for your cosideration

Hi,

I'm looking comments on which name brand computers generate the least RFI.
I have an old 586 which I built and it radiates like crazy (S8) and I'm ready
to upgrade. If you have an IBM, Dell, Compaq or something along that line and
you use in conjuction with HF work, please let me know how noise(less) it is.

Source record: 124689

You did not state the model but I have an Accord EX-99 and there is a gromet in the right side of the firewall which will allow you to run a power line. This hole is near the air conditioner lines within the firewall. Use a piece of plastic string like is found on weed eaters to feed a string through this opening. It will come out just at the lower section of the firewall inside the car. You can cut out the inside ofthe gromet to the size of your wire and then replace the gromet in the hole for wire protection. I have done several installations on Honda's and they do not present any RF problems. Trunk -mount your antennas becasue of the radio and defroster wire in the glass. I would suggest that you use a radio with a detachable head and mount the radio in the trunk, staying away from the computer up front All connections should be from the battery and use a fuse in both the positive and negative power lines. Use at least #10 wire, stranded if possible..

2800. Compare HF rigs - which one?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-28 00:00:00 UTC
From: Charlie Hicks <chicks@ix.netcom.com>
Message-ID: <01be1a78$f24bbc80$497fb8cd@fcents1.fceomaha.org>
Source record: 124692

I'm probably opening a can of worms here but would like some feedback:

I currently have an Icom 736 HF+6M rig and enjoy it. I have been reading some about some of the new and not-so-new rigs and am considering upgrading. I know there are lots of tradeoffs between rigs but I am more concerned with the basics: Good, low noise, sensitive, selective receiver; clean transmitter, easy to use, functional design, etc. I am not a contestor. I work mostly phone, very little CW and very seldom any digital modes or RTTY but don't want to preclude the use of these modes. I would like to have computer control as an option as well - but at a lower priority.

I don't live near a ham store where I can try these rigs or turn the knobs - all I have is the literature, the net and dealers preferences.

If I set a budget limit of somewhere around $2,500 but not more than $3,000 - what rigs would stand out given my interests?

I am considering (in no particular order):

FT1000MP
FT847
Ten Tec Omni VI+
IC756 or IC746
TS870S
TS570D

If you have a working knowledge of any of these and care to express your likes/dislikes - I'd like to hear it. Please keep it constructive and please don't turn this into a flame war or vendor bashing.

Thanks,

Charlie

2803. Re: Yaesu FT8100R vs Icom 2710H

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: rickg@callamer.com
Message-ID: <aDh82.5$J94.77@twinkie.callamer.com>
Source record: 124444

In article <72qtg7$mn9$1@news.ncal.verio.com>,
>
>I've pretty much decided on getting the Yaesu because of its extended
>receive range. It receives from 110 - 550 mhz and 750 -1300 mhz (the Icom
>won't even receive in the 460 mhz area which is used in my local area for
>several police frequencies).

For some STUPID reason, ICOM America always ships the IC-2710H USA
version with extended receive disabled. Too many people get the wrong
idea and may skip buying this very nice radio because of misinformation.

Cut the ONLY obvious jumper in the radio, and it will then receive the
following:

Left Right
118-174 136-174
320-479 320-479
849-869
894-956

ICOM America was kind enough to fax me the instructions.

Here they are, exactly as received (including typos and poor english).

Cutting the jumper was the only modification necessary on mine for full
receive.

==========

Expand frequency for USA version.

Notice: We can not guarantee specification when expand frequency.

How to expand frequency range.

Receive frequency only. (Three modification methods)
-USA version already expand VHF band.

-All frequency.
1) Cut the W18 jumper wire on MAIN unit.
-300 / 800 MHz band only.
1) Remove the D134 diode on MAIN unit.
(Do not cut W18 jumper wire)
-UHF band only.
1) Remove the D132 diode on MAIN unit.
(Do not cut W18 jumper wire)

-Receive freqency range.
118.000MHz - 135.995Mhz (AM / FM) Selectable mode.
138.000Mhz - 174.000MHz
320.000MHz - 399.995MHz (FM / AM) Selectable mode.
400.000MHz - 479.000MHz
849.000MHz - 869.000MHz / 894.000MHz - 850.000MHz
Note. Can not receive frequency between 869.000MHz to 894.000MHz.

-How to switch AM and FM receive mode.
1) Select AIR band or 320MHz band.
2) Push [MONI] key at more than 1 sec.
When select AM mode. Indicate '<' or '>' mark on display.

==========

Cross band repeater system.

How to set the cross band repeater system.

1) Cut the D139 diode on MAIN unit.
(Not necessary cut diode on USA version)
2) Set desire frequency on both band.
It is also selecable TONE frequency and frequency offset.
3) Push [VHF] and [UHF] main knob + [SET] key at same time.
When set the cross band repeater mode, Indicate 'L' display
at memory ch.

Note. It is selecable no hang up time repeate function.
Push [VHF] main dial knob + [UHF] main dial knob + [SET] key
+ [LOW] key at same time.

Caution: When you set para watech mode or cross set frequency.
Can not set cross band repeater mode.

How to release cross band repeater mode.

-Push [SET] key at more than 1 sec.

(following that was a circuit board layout showing the location of D139
as a leaded diode (non-surface mount) directly above the 'R' of the 'R440'
label and it is the left-most diode when you can read the 'R440' normal
side up.

==========

2806. Icom 756 vs 746 ??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: John <mstr-jl@swbell.net>
Message-ID: <BIh82.3679$Qm1.13563@typhoon01.swbell.net>
Source record: 124447

After spending the last week speaking to dealers, and people who own one or the other of the radios - my tally sheet is still full of question marks...Is there anyone who knows the differences between these two radios? Would you care to post your observations...?

I understand the receive is exactly the same for both rigs? Yet some dealers say the 746 has a 'better' receiver... When pressed how that can be (if things are identical), they just say "it just sounds better to me..."

I know the display on the 746 requires you to press a button for screen updates...where the 756 is more "live". And I understand the 756 doesn't have 2 mtrs...

Other than that, I'd really appreciate finding out the differences between the two rigs - I'm ready to buy (one or the other), and would like to avoid making a costly mistake...

put a solar charger there to keep the battery toped off when you're not there. Then if the power is off when you get there you'll still have a fully charged battery to start with. Plus batterys last longer if you keep them charged up. Also a fully charged battery is less likely to freeze.

Richard,

I don't know which one to use. I shipped a small package "Priority Mail"
and insured from Virginia to Ohio in May, about the 5th. It arrived either
the latter part of August or early September. So much for USPS. Certainly
not
really any better than UPS.

At least UPS has not taken months for any of my packages - all residential
deliveries. Out of several dozen packages this year, only one with damage.

Oh well.

Houses are not fed from "star" or WYE connected transformers,
they are connected to the DELTA configuration. You cannot get
120/240 volts from any WYE connected transformer. It would not
hurt anything to connect the antenna ground to the SYSTEM ground
(ground rod). Actually the National Electrical Code requires this.
It is a violation of the NEC to connect it to the neutral. Connection
of the neutral and the ground can only be made at the first
disconnecting means-usually at the panel or the meter/disconnect.
Meter/disconnects are not required if the meter and panel are within 6
feet.

2823. Yaesu FT-847 comments??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: Tom Norris <badger@telalink.net>
Message-ID: <IRk82.2176$eZ4.4820601@news4.atl>
Source record: 124464
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was soliciting comments early this week on the Icom 746. Got one whole reply! So will ask mosre questions:

Also in my quest for a rig for myself I actually read the specs on the Yaesu FT-847. One more band than the IC-746 (though no neat big LCD front panel) and similar features. More filter choices too.

Yaesu is throwing in a free tuner or ATAS-100 antenna with any sets purchased before the end of the year. Good incentive, as the rig is already $100 less that the HF/6/2 IC-746.

Any comments from folks that have the unit? Is it as good as the ads say it is? Don't have a ham store closer than Atlanta - a 4 hour drive - so it is difficult to set down and compare as I shop for a new radio.

Thanks for any replies! Please send copy of your reply via email so I may actually get it! My mail server can be odd at times.

2824. Wanted Mobile "TELEPRINTER"

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: J E Miller <jbjmiller@worldnet.att.net>
Message-ID: <73slq7$4mo@bgtnsc01.worldnet.att.net>
Source record: 124465

I am restoring an old patrol car and am looking for a TELEPRINTER that was installed in the car during the early '70's. The teleprinter did not have a keyboard and was strictly for receiving incoming "hard-copy" data. It was connected thru a separate in car receiver. The unit had an internal roll of thermo paper, worked on 12 volt, and had an illuminated window/tearbar where the message could be read at night. I believe the unit was made by Motorla.
Thanks,
Jim

Your ONE priority mail experience certainly doesn't provide much in
the way of a statistically relevant sample.

I've had exceptionally good luck with both UPS and USPS. I've also had
snafus with both.

I have a small manufacturing company and we ship 4-6 boxes/week with
UPS. They are usually fine, but I find their service quite slow.

USPS is more expensive, but I've never had a priority package take
more than three days. Lately, I've been getting "2 day" priority
packages from less than 1000 miles in one day.

BTW: UPS did not work at all on the 4 day Thanksgiving holiday. Must
have been in the new contract. Pissed me off!!

I'm selling this receiver/transmitter combination on eBay at

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=45793183

I bought these receiver/transmitter pair about 5 years ago and used them for about a year before I moved to an apartment. At the time I boxed them up they worked great. A matching speaker is included in the price along with a morse-code keyer and a microphone (it doesn't have a stand though). I have the original manuals, boxes, and an advertisement (text included below) that ran in magazines when the radio was new.

I will pay shipping (which is about $35 due to the fact that the receiver and transmitter weight a bunch). For method of payment I would prefer a cashiers check. I will accept a personal check I'll wait for it to clear before shipping the goods. If the radio is DOA (dead on arrival) I'll refund your money.

Gordon Edwards, N4VPH

Here's the text from the advertisement (when it was new):

Kenwood developed the T-599D transmitter and R-599D receiver for the most discriminating amateur.

The R-599D is the most complete receiver ever offered. It is entirely solid-state, superbly reliable and compact. It covers the full amateur band, 10 through 160 meters, CW, LSB, USB, AM and FM.

The T-599D is solid-state with the exception of only three tubes, has built-in power supply and full metering. It operates CW, LSB, USB and AM and, of course, is a perfect match to the R-599D receiver.

If you have never considered the advantages of operating a receiver/transmitter combination... maybe you should. Because of the larger number of controls and dual VFOs the combinaton offers flexibility impossible to duplicate with a transceiver.

Compare the specs of the R-599D and the T-599D with any other brand. Remember, the R-599D is all solid state (and includes four filters). Your choice will obviously be the Kenwood.

2836. Opinions- Looking for a new Dual-Band Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <36623B77.65B83052@ccnet.com>
Source record: 124477

I have not been paying much attention to what is on the market these days as far as dual band mobiles go. I have several radios but the FT5200 that I use in the car every day has given up after several years of honorable service. I am using this as an excuse to get a new radio.

Looking for a dual band (2m/50W - 70cm/35W) mobile with:

- remote mounted control head (this will go in my Explorer which as a big center console so I want the radio under the back seat)

- cross band repeat ability (I use this when visting the in-laws down in the "hollar", and when camping where my HT doesn't work so good)

- CTCSS encode/decode (they almost all decode now, huh? - my 5200 required and add-on board)

- Memories... more than the 16 per band my 5200 has. (does anyone make a dualbander with alphanumeric memory?)

- Out of band recieve. I don't need DC to light - I just want to be able to have a few marine channels available for monitoring. Out of band tx modifable would be nice though I no longer have a need for it.

I know I could start shopping, looking at catalogs, etc. I looked at the Kenwood, Icom, and Yaesu websites - they are pretty feable. I actually just made my mind up Thursday to start looking for new ones. I was at the "in-laws" for Thanksgiving about 15 miles outside of Redding CA when we had a couple of moderate earthquakes.

- My FT5200 was in my office...cuz its broken.

- My trusty old FT470 was right next to it because I forgot to pack it.

- My FT290mkII and my Kenwood TM-441 (or whatever it is used to use for a 440 base station) are packed in the garage due to lack of use.

- The radio I had with me? A Motorola Saber UHF HT. Works fine but only had one ham repeater programmed into it for the area... and its the one I can't reach from the in-laws' house. None of the locals there are using 440 anyway.

So we relied on a scanner to listen for info because the local TV and radio stations couldn't get anything right for a couple of hours. The local hams on 2m we eavesdropped on had better info than the cops.

I decided that I need to get the 5200 fixed or get a new radio. I would kinda like to give myself a new radio for Christmas. I am now looking for opinions on what is available today.

My brand preferences in order are:

Yaesu
Icom
Standard or Kenwood

Thanks

I have had mine since around October 1993. It was an earlier unit that had to go back twice for warranty upgrades (due to CPU problems). It is a nice radio and I would not get rid of it. Unfortunately the newer radios on the market do not seem to be as solid (or have 5 watts) as this model. Only problem with mine right now is that it could use an alignment job. It has been starting to have intermod problems which I attribute to age and use. Luckily it still looks mint due to keeping it in the carrying pouch all these years.

2846. Can an Icom 706 do this?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: Seth Miller <seth.miller@NOSPAMworldnet.att.net>
Message-ID: <3660BE8F.6045B4B5@NOSPAMworldnet.att.net>
Source record: 124504
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Quick question for one of you IC-706 owners out there...

When operating in split mode, can you set different modes for each operating frequency? In other words, can you set the radio to receive on, say, 10.132 MHz RTTY, and transmit 2.1 kHz higher on LSB? Also, can you enter this configuration into a memory and have everything retained?

I use this trick with my IC-746 when working digital modes so that I can transmit on LSB AFSK but receive in the RTTY mode in order to take advantage of the narrow RTTY filter. Was wondering if this would work with the 706 as well...

Thanks in advance -

- Seth

Source record: 124508

I own an MFJ 1278B and a Yaesu Ft990. I am trying to make the cw keying installation, however the 1278 manual indicates I should use a two conductor shielded cable from the keying output jack of 1278. My FT990 manual states emphtically that I cannot use a 2 contact plug in the rig's key jack. Therefor I am at a loss as to how to interface the rig to the 1278. I was hopeful of taking advantage of the cw memory keyer feature. Any suggestions would be greatly appreciated. 73's de Mike W2OP Email at xfd@msn.com

>computer. [...] As long as I run the laptop off commercial
>power I do fine. When I run the laptop off the inverter, then I
>have a power defecit which needs to be made up with the battery
>charger or generator.

Sounds like a trick setup! But I have a question: Why not just run the laptop direct off the +12v source? Lots of older laptops used +12v as an external power source (so they could easily be used while mobile, I suspect - plus they often used **standard** co-ax plugs...what a concept!) Even if the laptop needs more than +12v or different voltages, a DC-DC converter "brick" or maybe even a 78xx linear (for low current draw) would probably be more efficient than going through an inverter and power supply.

The only thing you might need to worry about going direct is hash noise from the computer getting back into the radios. However, I think you would have already had that problem with the inverter if you're going to have it. If it is a problem, bypass capacitors or maybe an inline filter should probably solve it.

Good luck!

In article <3660D1F8.9A3A28F4@hughes.net>, ajurya@hughes.net blathered on
about...
>Anyone have any suggestions? Any good holes in firewall? Thanks, Art

I installed a light bar on a '97 Legacy Outback, automatic. There is
a grommet that appears to be near where the clutch cable would go if
it had one. Grab a flashlight and look up under the dash to the left
of the brake pedal. You should see the back side of the grommet - there
will be a couple of small, 0.5" rubber tips on either side of a 1.5"
hole. Something like "o O o". Now pop the hood and look on the firewall
for the front side of the grommet - looks like a diamond with rounded off
corners. Look inboard of the brake booster and down maybe 4-6". Just
get your fingers under the edge of it and pull it right out. If it
doesn't want to go, compress the small tips and push it out from under
the dash.

All I ran were power and ground wires, so I just poked a hole in the
center section of the grommet and pulled the wires through. Right in
front of the grommet, in the engine compartment, is a wire bundle
that leads right up to the battery - good to ziptie power/ground wires
to.

Be careful under the dash - tie the wires well out of the way of pedals
and linkages, etc.

As far as a place for the radio itself, there are some pockets/change
holders/etc in the center console (where the AM/FM radio and A/C are)
that might work, depending on how big the radio is. To get access
to the center console, pop out the cup holder at the top and remove
the Phillips head screw on either side. Then pop off the trim plate
around the trans shifter (just clips in) and undo the two Phillips
head screws at the bottom. This will let you pull the center console
trim off and remove the pockets/change holders/etc.

Good luck!

Matt Roberds

It's a good price for the radio as described. I am selling my ts680 w/ 6m amp
for $650 and the '690 is newer and has more filters so ought to be worth more
from that perspective. Overall, the '690 is a keeper.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band

versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them. |

Crystals |

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal | fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations. |

Crystals for Plectrons |

The Plectron P1 series contain two crystals. The second | local oscillator crystal is 11.155 MHz regardless of band. |

On VHF high band (148 - 175 MHz), the P1 series employ this |
formula for the first local oscillator crystal: |

Crystal frequency (MHz) |
= (station freq (MHz) + 10.7) / 4 |

or |

Crystal frequency (MHz) |
= (station freq (MHz) - 10.7) / 4 |

On VHF low band (25 - 54 MHz), the P1 series employ this |
formula for the first local oscillator crystal: |

Crystal frequency (MHz) = (station freq (MHz) + 10.7) |

or |

Crystal frequency (MHz) = (station freq (MHz) - 10.7) |

There are two crystals (Y1, Y2) used in the Plectron R700 |
series, one for each local oscillator. The crystal |
formulas are: |

RF Range (MHz) Y1 (MHz) Y2 (MHz) |
_____ |
25-29 (f+10.7)/3 11.155 |
29-32.6 (f+10.7)/3 11.155 |
32.5-35 (f-10.7)/2 10.245 |
35-41 (f-10.7)/2 11.155 |
41-47 (f-10.7)/2 11.155 (use 10.245 MHz |
for Y2 on 44.62 MHz) |
47-54 (f-10.7)/3 11.155 |
148-158 (f-10.7)/9 11.155 |
158-175 (f-10.7)/9 10.245 |
450-470 (f-10.7)/18 11.155 |

The economy Plectron 500 series use this scheme for the |
first local oscillator crystal: |

RF Range (MHz) Crystal (MHz) |
_____ |
25 - 35 (f+10.7) |
35 - 54 (f-10.7) |
148 - 174 (f-10.7)/4 |

Most Plectron 500s use an 11.155 MHz second local |
oscillator crystal. However, a 10.245 MHz crystal is used |
instead for receivers in these ranges: 33.4 - 33.78, 44.62, |
and 158.78 - 158.82 MHz. |

Power Cords |

AC power cords for both types of receivers use unique
connectors and are scarce. I published the pinout for both

Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak. |

Squelch and Minimum Volume Setting |

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81. *

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives |

Too bad Plectron is out of business. If you wish to |
purchase a new receiver with "Plectron-like" signaling |
capabilities, contact Reach Electronics: |

Reach Electronics |
1311 West Pacific |
Lexington, NE 68850 |
(308) 324-6661 |
(800) 445-0007 |
FAX: (308) 324-4985 |

Reach sells tone & voice pagers, Alert monitors, and |
ENCODERS. They also do contract manufacturing. |

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Your no change assumption is correct, the sucker is fixed to cool blue.

I have written Icom and told them that not to put a color LCD in this radio was a big mistake. How much more would the radio have cost? $50 maybe? ICom has a great idea with this radio. They took a few short cuts and really crippled the radio. Also, in the summer my shack gets warm sometimes, about 80 deg F. The radio's fan only comes on during transmit and then cools down. If the radio is in a warm room and never goes into transmit, after an hour or two it will get very warm. So warm the LCD will lose contrast and becomes even harder to read. So, I went to Radio Shack and purchased a 1.5" 12v fan and mounted it behind the LCD board (fan runs continuously, very quiet) so the LCD runs cool. In contrast the 1000MP fan comes on when the radio gets warm, regardless if your transmitting or not.

I have also removed the 9 kHz (AM) 455 filter and replaced it with a 6 KHz filter for better SW receive.

The IC-756 is a good radio, just a few additions by Icom and it would have been a great radio.

I have also thought about replacing the 9 khz filter, but it is used in the FM-N mode as well. You might try this trick: Use the normal SSB filter (2.8 khz) instead and shift the 455 khz passband all the way to the right or left. this will allow you to tune the signal in the AM mode and only listen to one sideband. The equivalent band width on one sideband at 2.8 khz is 5.6 khz double sideband. The results are quite acceptable for both AM broadcast listening and ham AM on 3875.

2874. Standard C710 - conversion info please

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-29 00:00:00 UTC
From: Andrew Marshall <andrew@g8bur.demon.co.uk>
Message-ID: <Ac5mOAA$dYY2EwAH@g8bur.demon.co.uk>
Source record: 124621

I have a Standard C710 3-band HT ('J' in a triangle after the serial number - possibly the Japanese home market model) and wondered if anyone has info as to whether the radio can be converted, or re-initialized by a combination of keystrokes, to fully open-up the TX range, especially on 23cm, but ideally on 2m and 70cm as well.

The radio works very well, but at present it will only TX from 144-146, 430-440 and 1260-1300MHz; I'd like at least to be able to Tx 1240-1300, and preferably the full UK band of 1240-1325MHz. The 1750Hz tone burst is also disabled, which gives a problem accessing those UK repeaters not yet fitted with PL/CTCSS subtone.

Unfortunately I've been unable to get any info from the company which sold it to me; can anyone help please?

TIA

73,
Andrew G8BUR.

Walt,
I believe you are the exception and not the rule. I too had a package
shipped to me in Seattle from the east coast that arrived 13 days later.
This was after it took a weeks vacation in Albaqurque MN. I did just as
you indicated in your post and tried to get delivery information from
their customer service dept two day before it arrived. I conducted
myself in a professional, business like manner and was told that:

1) They did not know when it would be delivered
2) They do not guranteee delivery times on shipments to a residence.
3) The shipper would have to file a tracer to get any additional info.

I must say that I also used to read all the bad press about UPS here on
the newsgroup and felt that UPS was given a bad rap, since I used UPS
exclusively for the many shipments I do on a weekly basis. However, due
to their lack of customer service and the poor treatment that I recieved
here at their Tukwilla WA facility, I will not use them again. I now
ship via USPS and I'm very pleased with their service.

I am very confident that given time, UPS will show you their true
colors, and you will join the rest of us in avoiding them like the
plague.

Regards,
Richard

I've had mine since it was brand new. Keeping it in a case makes it still look brand new. It is one of the newer models before they were discontinued that did not have the 800 MHz receive. I found someone who led me to obtaining a board that after I installed it, fixed all that. Please don't ask me where you can get one of these boards...I only know now that you probably need to look north of the U.S. border.

IMHO the FT-530 in one of the finest HT's that was ever made if not THE finest. I will not sell mine, it makes a great scanner as well as a great dual-band HT.

We've noticed and had confirmed that UPS wasnt delivering to
residential addresses (rural) but once a week. Our business was
suffereing from this. We finally gave up messing with UPS.
we now use USPS which i s FASTER - Really!.
And they deliver every day... not once a week like UPS.

> Roy Lewallen, W7EL

Are you sure it's the neutral that's going to the chassis? Assuming we're talking about a 120 VAC 3-wire arrangement, I'd expect the hot (black) to be switched, the neutral (white) to be unswitched but not connected to the case and the ground (green) to be connected to the case.

MFJ Deluxe Power Sentry, Model MFJ-825.

It has two meters on its face, one for forward power, and the other for reflected power or SWR. It can be switched to measure average power, peak power, or SWR. It has 3 switchable modules installed, to measure forward power as follows:
HF:
200 or 2000 watts Full Scale
HF:
2 or 20 watts FS
VHF (50-175 Mhz)
20 or 200 watts FS.

This should cover just about all your station power measuring/testing needs, I would think!

It's black metal with chrome trim. It's ery accurate and in near-perfect cosmetic condition. It dates from c. 1987. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers, You get the manual with it.

The price is $125

> "There is no substitute for horsepower...."

A modified IC-706 and a bottom- of- the- line MFJ antenna tuner
(MFJ-901B, 5" x 2" x 6", $80) would do the job; you'll also want to lay
down about 50 feet of wire on the ground for a 5MHz counterpoise, right
under the antenna. You can tune it up by hand, using the IC-706's
internal metering functions of load VSWR and RF power out.

Out of curiosiity, Dave, with whom do you intend to communicate on the
HF Aero-band? All the comm's on HF are between airborne aircraft which
are out of land-based radar range, and control points on the ground
close to the aircrafts' flight paths over a (radio) path that is beyond
line of sight for their VHF radios,, right??

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!
Randy

I have one, it's great. I have heard a very very slight hum on the carrier, almost
like a PL tone, but it's so far down in level, it's of no consequence. All in all, I
know of 4 others who have this PS and they all love them just as much.

And it's soooooooo much lighter in weight too. Handles 20 amps with ease!

Ed,

The "Beyond Mars" mod does not open RX (or TX) above 470 Mhz.
It does the following:
VHF 136-173.995 TX - 118-174 RX
UHF 410-469.995 TX - 300-470 RX

For those who are wondering, here's the mod:

Remove the detatchable face and the bottom cover. Look at the pcb that
is vertical behind the the front of the radio. There will be 5-6 sets
of solder pads numbered 0-whatever. There will be 2 chip resistors on
the first two pads, the rest are empty. Remove the resistor on the
first pad (the one closest to the grounding spring-should be #0). If
you have already clipped the wire (MARS mod) reconnect it and then reset
the radio.

73,

2904. Re: Opinions- Looking for a new Dual-Band Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: six_rabbits@yahoo.com
Message-ID: <73v75i$1j4$1@nnrp1.dejanews.com>
Source record: 124360

I'm in the market for a dual-band mobile too, but in addition to cross-band repeat, I need good intermod rejection for my trips into Boston. The guy at HRO could only maybe recommended the Kenwood TM-V7A to handle the IM in the city, and he wasn't too sure the Kenwood could handle it either.

Chris, check out the Nov 1998 edition of QST for their product review of the ICOM IC-207H, KENWOOD TM-V7A, TM-G707A, STANDARD C510A/CPB510A, and YAESU FT-8100R. All but the Standard have detachable front panels. All but the Yaesu have CTCSS decode. Only the Kenwoods have Alphanumeric memory naming. They didn't like the Kenwood's "cool blue" display, especially in bright sunlight.

Can I use the 10 MHz IM measurements to compare intermod performance? QST says this correlates to performance in intermod alley, but the HRO guy says that's not the whole story.

Can anyone share their experiences with the Kenwood TM-V7A in particular, or dual-band mobiles and intermod in general?

Thanks, and 73

You are correct. I simply wasn't thinking. Of course, it's the safety ground, not the neutral, which is connected to the rig's chassis. Please disregard the stupid question and accept my apology for the waste of bandwidth.

Put brain in gear before engaging mouth. Put brain in gear. . .

Please check it again Roy. The power transformer should be connected between hot and
neutral. The ground should be connected to the chassis.

2907. What's wrong with this beam?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: guyzee@ibm.net
Message-ID: <3663121C.3AFF8CDA@ibm.net>
Source record: 124363

To all beam gurus,
I installed a 7 element tri-bander on 11/21.
The SWR was perfect (very good) across 20, 15, and 10.
The next day the SWR on 20 shot up, but the SWR on
15 and 10 was still good.
It is a 7 element tribander.
The beam has:
1) a full size 20 mtr reflector
2) a full size 15 mtr reflector
3) four elements forming a log cell for the 20, 15, and 10
meter driven elements. (one acts as reflector on 10)
4) a trapped director with 15 and 10 meter traps.
My theory in this problem is that the 20 meter reflector
changed length OR a 15 meter trap is bad.

Looking at the following SWR vs. band chart, do you think
the trap is bad or the 20 meter reflector changed length,
since either can affect the 20 meter band SWR without changing
15 and 10.

Thanks to all who respond, guyzee@ibm.net

Had the same problem. Rig was not quite 1 year old. It is an intermittent PTT micro switch. Had sw replaced under warranty at AVVID radio in Irving, TX. TNX, Cliff. He might be willing to give the Digi-Key part number, I don't have it.

It only requires 4 desolder and resolders to change out. It has worked flawlessly since then.

This is the forrunner of a newer model which encorporates cross needle
technonlogy and covers all the same frequencies and ranges. The newer model
sells for $85 and can often be found on sale at $10 or so off. Your price
is about $75 to $85 too high.

2910. Re: Yaesu FT-530 Opinions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: Alan <fromjustus@mediaone.net>
Message-ID: <36630F7D.DDAA647@mediaone.net>
Source record: 124366

I have had my FT-530 for many years, and of all the HT's that are out there right now, it still is my favorite. You can expand the receive range all the way up to near 1GHz, and believe it or not, it is fairly sensitive up there.

It also has the capability of listening to 2 frequencies in the same. That is really a neat feature. A true dual band radio in an HT package.

If you can buy a clean one and check it out, and get it at a good price, buy it!

I'm not letting mine go for any reason that I can see based on all of the new

HT's that are out there now, and I have 4 HT's already on both 2 & 440.

It's a great scanner too, the LCD readout at night is almost blinding! Find that on any other HT. And the keypad lighting is the standard for all HT's.

Accessories are still sold for it too. The one major drawback as I see it, is the putrid audio output. It truly stinks. You almost always have to turn it up all the way for any decent audio. Placing wide clear packaging tape over the speaker grill, and cutting a small 1/16" high by 1/8 to 1/4" wide horizontal slot in the center of the tape "over a slot in the grill" will amplify the audio significantly. Also be sure to cut a slot in the tape where the microphone is located in the grill so you can be heard. You can also use a speaker mic with it and the audio from the speaker in the mic will be plenty loud. They just limited the audio to the internal speaker because that way it will never rattle from being driven hard. An annoyance, but not nearly enough keep one from one owning one.

If it's a good radio, you won't be disappointed. But check it out first. Caveat Emptor must always be kept in mind.

Have fun,

Alan, de WA6AQC

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!

> on the same rig using either a Ship or Aircraft station license.

This has come up before over use of an amateur rig on boats for BOTH
amateur and marine communications - I have asked the FCC about this by
email - twice - and never got an answer.

97.11 Stations aboard ships or aircraft
(a)The installation and operation of an amateur station on a ship or
aircraft must be approved by the master of the ship or pilot in command
of the aircraft.
(b)The station must be separate from and independent of all other radio
apparatus installed on the ship or aircraft, except a common antenna may
be shared with a voluntary ship radio installation. The station's
transmissions must not cause interference to any other apparatus
installed on the ship or aircraft.
(c)The station must not constitute a hazard to the safety of life or
property. For a station aboard an aircraft, the apparatus shall not be
operated while the aircraft is operated under Instrument Flight Rules,
as defined by the FAA, unless the station has been found to comply with
applicable FAA rules.

Now I was pretty much vilified by some boaters that said this only
applied to "compulsory" ships when I brought this up in the boating
venue. But it seems to me that the ONLY exception to keeping equipment
separated is specific to "voluntary" ships. Although nobody - including
the FCC has been able to show me a ruling, or anything else, that

provides for more exceptions.

One boater/ham said that it was OK on a voluntary ship (boat) if the radio worked on marine bands out-of-the-box without modification. You of course have to a general radiotelephone or radiotelegraph operator license to do anything to the inside of a marine or aircraft radio.

Since we are talking about planes -

How are you going to comply with 97.11(b), and still use the radio (after modification, I assume) for BOTH amateur and aircraft communications?

The only "applicable FAA rule" I can think of (at least for part 91 operations) is 91.21, and could easily be satisfied. I don't know what is FAA rules are applicable if you were flying under part 135 or 121.

[I would imagine that sailors are tuning backstays with external tuners]

Periphex makes a killer 2400mah battery for the FT530. Sure it's big, but
you only have to charge the battery once a week!
I have the 1400mah version and it's the same way.

A word of warning: I had one once. It sucked. It's front end was very prone to intermod. Strong a.m. band and even shortwave stations would show up several places on the dial. It was that experience which became the last straw and caused me to adopt this maxim as an iron law: NEVER BUY ANYTHING BUT PARTS AT RADIOSHACK!

If you are not happy with the current offering of software voice keyers, how about one that was designed from the ground up with MS operators, contesters, and just plain ragchewing in mind! If your PC has a Windows compatible sound card, its time you try this digital voice keyer. (Heck, one of the users even figured out how to do MS CW skeds with it.)

After some intense development effort, VoiceKeyExpress, the newest digital voice keyer, is now available.

Check out http://home.earthlink.net/~n7qjp for the details. You'll be glad you did!

Select the VoiceKeyExpress link from this page to view the user manual, FAQ page, and download page.

Hope you enjoy it, just in time for the next meteor shower!

Lets see; had both like 570dg better. the 570 will do 160 watts on 10 meters
265 watts on 80 meters. it is a hot dog. great receive adjustable trans and receive output.ctss tone menu easy access it is real super user friendly. i personally like the 570 better.

I have a module that will operate from 400-1000 MHz at 25W output. It only requires 1 mW of input for full output. Of course if that's to low you could always use an input attenuator or remove some driver stages. Let me know if this sounds like something you'd be interested in.

I don't know if they have a home page or not...but if they do, you can be sure
it'll have nothing about older stuff.
They are a military contractor and are limited in what they can do.
Besides, in a weak economy, if doesn't produce revenues it doesn't get done,
This is why when you call Watkins Johnson, Racal etc., if you reach someone,
they'll politely brush you off. If you insist on asking why, they'll tell you
that you are a "non-revenue call"
They'll also tell you goodbye.

Message-ID: <36642124.125534629@netnews.worldnet.att.net>
Source record: 124404

Mint Drake 7-line station:

TR7 transceiver with All "A" mods, FA7 fan, 2300/1800/500/300 Hz filters, Noise Blanker, original operator's manual and orignal service manual (no copies);

PS7 power supply with FA7 fan and original operator's manual with schematic;

RV75 synthesized VFO with TR7 interface cable and original operator's manual with schematic.

The TR7 is a "9+" and looks great; front panel and interior are immaculate. One minor (< 1/16" ding on top right chrome trim). The TR7 has the WARC band mods. The TR7 has been set up for use with an R7A, so if it is to be used stand-alone the external receiver and external antenna jacks must be jumpered or internally brudged. The PS7 is a "9" with a few minor scratches on the front panel and top cover. Interior is real good. The RV75 is a "9++" inside and out. All items work great, all pilot lights work.

$1000, includes FEDEX 2-day freight anywhere in US.Shipped in original

Drake boxes.

Will send digital pix or other info on request.

Date: 1998-11-30 00:00:00 UTC
From: n8ppz73@aol.com
Message-ID: <19981129234314.11079.00000065@ng25.aol.com>
Source record: 124406

Looking for an Alinco DR-600 mobile. Got one you aren't using? Let me know, I have some stuff to trade if so inclined.

Grego, N8PPZ

2951. Mint Drake R7/RV75 combo

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: cslc82@email.mot.com
Message-ID: <36662305.126014759@netnews.worldnet.att.net>
Source record: 124407

Mint Drake R7/RV75 combo

R7 receiver with All "A" mods, 8000/2300/1800/500/300 Hz filters,
Noise Blanker, original operator's manual and orignal service manual
(no copies);

Rare 1544 adaptor with R7/RV75/TR7 transceive cable;

RV75 synthesized VFO with original operator's
manual and schematic.

The R7 is a true "10" inside and out...not a scratch on it. Performs
beautifully...by far one of the best receivers available at any price.
The RV75 is a "9++" inside and out. All items work great, all pilot
lights work.

$1350, includes FEDEX 2-day freight anywhere in US.Shipped in original

Drake boxes.

Will send digital pix or other info on request.

2952. Re: For Sale-Yaesu FT-847 xvcr

Hi :) I'm an electronic musician seriously searching for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment (MIDI and pre-MIDI). In general, I'm looking for working or broken instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~. The more unusual, the better.

Also uses sweep tubes for the final, but is otherwise a much better rig than the 101-series. I had one that I bought new from Harrison Radio, and used for years. I let it go for a TS-520 because it ran the pants off my amplifier!

You will be amazed at the mechanical packaging on this rig.

NO, David...I apologized to ALL and to HRO a couple of days ago...

A real bad typo day that was...<g>

I haven't publicly stated here that I would, personally, NEVER use UPS to ever ship anything again in my life due to weird circumstances, late deliveries, missed trucks, et al. For me - it's either the USPS or FedEx for my clients and customers. If it's not urgent, USPS gets it. If it's urgent, FedEx is the only way to ship overnight or 2-day.

But that's beside the point....

- Clint Bradford

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. I will also through in a ICOM 27 2 meter rig with tone board and tone mic, and a KPC 2 TNC. If you have a TS 520 or TS 820 both with mic I will trade just the computer. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,
Oris

> with built-in tuners will tune a long wire.

The first statement is untrue, since the aircraft station license
allows such operation. What rig are sailors in sailboats using
to run a longwire (backstay of the sailboat) for marine/amatuer
band work? This is a common application, running Ham on
the correct bands with an amateur license, and industrial bands
on the same rig using either a Ship or Aircraft station license.

Must be a radio that will work. Failing one with an internal tuner,
what rig/tuner combo would do the job? Size is critical.

Howdy All,

I have an Icom AT-500 autotuner with no manual. It has one input and several outputs. On my AT-150 you can select what band goes to a particular output with internal switches. I could not find any such switches on the AT-500 so my question is: How the heck do you select a particular output for a particular band?

Thanks for any help,

73 de Jerry

2975. Kenwood Microphone is CRAP!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: cabletek73@aol.com
Message-ID: <19981130095850.21084.00000231@ng-fi1.aol.com>
Source record: 124431

Anyone having as much fun with the Kenwood MC-53DM handheld mike supplied with most newer mobiles as I am?

This design has to be THE WORST I have come across in quite a while.
The amount of pressure needed to keep the PTT depressed is annoying and very uncomfortable during extended conversations.

Sometimes the only way to know if your transmitting is to actually look at the display on the radio, which when your driving could be a problem.

Seems as though the only fix for this (if you plan on using your radio at home) is to BUY another microphone (desktop, etc).

Poo Poo on Kenwoods part as far as Im concerned, I attempted to find out if there is a fix for this from Kenwood and got the bum rush off the phone, yet HRO agrees in that many people are calling them with the same inquiry.

It may not be illegal where he's going to use it, but you're right that none of the internal autotuners have the range to tune a random wire antenna. So he should forget that idea right away. Almost all of the current crop of HF transceivers can be modified for out of band operation, but he'd better figure on carrying an external tuner, a cheap manual MFJ tuner would probably do fine. A plain jane IC706 with a MFJ901 tuner should fit his size and weight constraints. I know that combination will handle a random wire antenna on several ham bands. I've done it. It should also work outside the ham bands after the mod to outband the radio is done. If he just has to have an autotuner, then one of the SGC tuners should do it. The AH3A Icom tuner should work too, and interfaces to the tune circuits in the radio. But those are a bit of overkill for this job.

I recently purchased a radio from a ham that was severely misrepresented. I got it VIA USPS COD. The guy is in the ham call book. Does anyone have any experience with this type of fraud? A technician said it would cost about $200 to fix the Kenwood TS440S. So far he hasn't answered my emails concerning this matter. What are my options legally? I don't want to identify him yet until I see whether he makes it good or not. Tnx! Bill K9KZ

My rig has a 3-wire power plug. The neutral wire is connected to the chassis of the rig. My vertical antenna has a number of radials at the base. When I plug the coax from the vertical into my rig, the vertical antenna ground system is being connected to the power line neutral. Is this against the code? If so, how can I connect the transmission line to my rig without violating the code?

I just did this evaluation to upgrade my mobile setup;
I wish the 2710 would have went past 479mhz, I would have gotten
that one, I listen to 483 & 508 here....
I had to get a Yaesu 8100r instead, because of the wide band recv.
I like Icom better personally...
Also, now I have to buy a decode board (FTS-22) extra $60-$70.
The Kenwood TM-V7A stopped somewhere around 470 too.
Reall like my IC-207h for the money, but it too stops around 479mhz recv.
Just my opinion.

>fully loaded, all the bells and whistles type of radio then your not
>going to like the DX-77. $650 not a bad price for a new rig!

**Had one for two months now and no problems, works fine.
Great audio reports with desk mike on AM, FM and SSB.
Did have to add a balun to keep rf out of the mike
circuit on my ant. I think it's a good deal for a non-dsp rig.
Drive my AMP file, alc etc..

I also have the matching power supply, which is also a good price.

Minor nit, on very low level usb signals, I notice a wisp of
rcv audio distortion. Noise blanker works best of auto
or repetitive type of of interference.

Yes, and easily. Just set VFO A for the TX freq/mode, VFO B for RX. Press
the SPL to put it into split mode, hit tx to verify it really did work,
select your
memory channel, hit MW, and it's there.

I didn't know it would either, but your question got me to try it. Also will
split
across any band/mode it seems. I seem to be learning as time goes by that
this radio will so almost anything. (well, that it is DESIGNED too.

2996. Help choosing HF rig for out of band (aviation)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: Dave Sutton <nospam.pilots@planet.net>
Message-ID: <73spmv$86n@jupiter.planet.net>
Source record: 124487

What would be the best choice for the following
mission: I need a portable HF rig that can run from
12 volt power, has an automatic antenna tuner
for running a longwire, and can be modified for
out of band work. This is going to be used as
both a HAM rig, and as an aircraft HF band rig.
Anticipated use is in the bush, sitting at the side of
the airplane (on the round) with a strung longwire
antenna and using aircraft power. Out of band
is required so I can run on the aviation bands.
Should be small enough to fir into a 20MM ammo
can with some padding, for weatherproofing and
shockproofing while being transported.

Any ideas??

2998. Yaesu FT-847 comments?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: Tom Norris <badger@telalink.net>
Message-ID: <r0m82.2188$eZ4.4850323@news4.atl>
Source record: 124489

I was soliciting comments early this week on the Icom 746. Got one whole reply! So will ask mosre questions:

Also in my quest for a rig for myself I actually read the specs on the Yaesu FT-847. One more band than the IC-746 (though no neat big LCD front panel) and similar features. More filter choices too.

Yaesu is throwing in a free tuner or ATAS-100 antenna with any sets purchased before the end of hte year. Good incentive, as the rig is also $100 less that the HF/6/2 IC-746.

Any comments from folks that have the unit? Is it as good as the ads say it is? Don't have a ham store closer than Atlanta - a 4 hour drive - so it is difficult to set down and compare as I shop for a new radio for my Christmas gift.

Thanks for any replies! Please send a copy of any reply via email.

2999. TS-450 vs. TS-570

Newsgroup: rec.radio.amateur.equipment
Date: 1998-11-30 00:00:00 UTC
From: slash830@earthlink.net
Message-ID: <3661ee21.13660711@news.earthlink.net>
Source record: 124490

Hello all,

I am currently deciding on which HF rig to get. At my local
Ham store, they have a used TS-690 (TS-450 w/ 6m) for sale. It comes
with every option the radio can have internally. Price=$975. I played
with it, and I loved it. Today, I just found out that I can get a used
TS-570 (the one without 6m) for about the same price. I have not
played with the 570, so that is where I need the help. I really do
think that the 450/690 is one of the best HF rigs that kenwood put
out. I looked at the specs on the 570 and they are pretty much the
exact same to the 450's. (I also have heard that the 570 isnt as much
as a "raw radio" as the 450/690.) The 570 has DSP, all the newer
features, and is obviously newer. To sumarize, I would like to hear
feedback from anyone who has used both rigs (or just plain feedback on
eith the 570 or the 450/690), or either. What rig do you think
performs better? All feedback will be greatly appreciated! Please
E-Mail me or reply to message in newsgroup. Thank you very much...

The 520 Is a great rig! $350 is to much for that radio. I bought one for
$200 at a ham fest in SC 2 years ago. I also ran a 520 rig moblie in the
mid eighties. I had alot of fun with it. 350 is just to much money for a
520 these days. You should be able to find a a 530 or a 830 if you save
a little longer you could get a 430 or a 440.
Have a great Chirstmas

I am running a Kenwood 570 DG barefoot to a G5RV. There is some
excess antenna coax layiung at the floor, near my feet.
Is there any rf safety conserns, or does the coax pretty much shield
the rf.
I probable should take a field strength meter aroud the area, but I am
in a wheelchair, and that can be interesting without help.
Anyont think there are any concerns?
Thansk,
John

That's true for a set with a transformer power supply. But if it is a transformerless set, then the case Roy mentions can occur. When the old time radio preachers used to tell us to put our hands on the radio to "feel the power", sometimes that was literally what happened. But the power came from the electric utility instead of from the Lord.

I believe it is the same battery that is used in the FT-757GX II. It is a 1/3N cell and is available at Radio Shack. They can be quite difficult to replace. I peeled the tabs off of the old one while it was still in the radio, put a dab of solder on either end of the new battery and soldered the new one onto the old tabs. Has been working now for three years! I was toying with the idea of buying a 1/3N cell holder from Digi-Key and installing it but tearing the radio apart is just too difficult plus I only expect to change it about every 5 years or so.

Note, the original one probably has a plastic covering around it making it look like a capacitor. The Radio Shack version is all metal with no plastic but that does not seem to hurt it.

Hi, Curtis and Dave,

I'm also wondering why not buy an all-band commercial transmitter like the SGC SG-2000 available at HRO for a paltry 1.5 kilobucks. I think the intent of the law is to prevent co-site interference by amateur equipment while the a/c or boat is under way. On the ham frequencies if you're parked, all you've got to do to be legal is pretty straightforward. You can use anything that you make or buy as long as it fits into part 97 for your particular license class.

On other frequencies the radio is probably FCC type-accepted, but a number of operational questions arise: What call sign would you use? What requirements on electrical performance have to be met? Maximum transmitter output power? Frequency stability? Spurious output? What kind of message traffic would be handled? What language would be used? Can data be transmitted? What kind? You would probably have to coordinate your frequency usage with the FAA to avoid interference with the HF-aero stations already in place.

Taking an amateur transciever and modifying it for out of band operation is illegal, even if you have a license to operate it. The commercial radiotelephone license only allows you to repair and maintain it. Marine / aircraft / etc, HF transcievers must be type accepted by the FCC for the intended application. Same goes for CB radios, even commercial amateur gear. Ham operator are the only ones who have the luxury of experimenting with their own transmitters (read - homebrewing) and legally putting them on the air. But even they require FCC approval if they build them for commercial use (I think the limit is two per year).

I bought a DX-1000 SW RCVR from KE4IZA James B. Glenn Jr. at first he said my radio fell off his car but Nov.11, 1998 then Nov. 26, 1998 he posted it on this group for sale. When I contacted him at his new email address timneh@hotmail.com he had my email blocked. This guy is real smooth until he has your money. I'm not giving up yet!
Just thought everyone should be warned. WA9OIG

Hi Guys;
Heres a new model TNC by MFJ.
Its the Model MFJ-1278B w/DSP. It's from an estate and I have no paperwork or software, if it even requires any. I do have the Cable to radio. This TNC does just about everymode, Like>>
packet, pactor, amtor, rtty, COLOR SSTV, 16 grey level FAX/WEFAX, CW, ascii, navctex, its also a memory keyer amd has a "mailbox" This is too complicated for me to hook up and try so I am selling it at an "as-is " price of $150 plus shipping CONUS. It's in excellent physical shape and MFJ will be only too happy to supply a manual!
Thanks es 73..........RICH-WA2RQY RLUCCH2098@aol.com

Well, if the coax is of good quality, no worries. Coax is designed to hold the rf in until it reaches its point of termination- that's it's whole purpose in life. As long as you aren't using leaky-lossy-etc. coax, you're fine. Leaky coax purposely lets RF out for use inside a metal building, for instance, with even RF distribution and no antenna.

Was this the Bearcat radio? I don't recall exactly, but...
I too was told it was for sale at $100, but didn't get response to later
E-mails. But, thank goodness I didn't send money.
Did you pay him? If you used a money order from the post office (at 85cents
they're a bargain--my bank charges $3.00), just take your receipt to the Postal
Inspector's office. If they get multiple complaints, they'll block mail to his
address.

>Does anyone know where to find the lithion batt in the radio and what the
>"common" part number is for it. In the Yaesu FT-757GX (not GXII)
>

It is referred to as BAT2001 on the Local Unit board, and is PN:
CR-1/3N-P . The Local Unit board is the big board under the top of the radio.
I believe the battery is located at the back end of the board, near J15...
thats kinda near the DC input plug to the radio.

Ed

> 97.11 Stations aboard ships or aircraft

> (a)The installation and operation of an amateur station on a ship or
> aircraft must be approved by the master of the ship or pilot in command
> of the aircraft.

That is -me-, so this is not an issue.

> (b)The station must be separate from and independent of all other radio
> apparatus installed on the ship or aircraft, except a common antenna may
> be shared with a voluntary ship radio installation. The station's
> transmissions must not cause interference to any other apparatus
> installed on the ship or aircraft.

No sweat.

> (c)The station must not constitute a hazard to the safety of life or
> property. For a station aboard an aircraft, the apparatus shall not be
> operated while the aircraft is operated under Instrument Flight Rules,
> as defined by the FAA, unless the station has been found to comply with
> applicable FAA rules.

Yup. No sweat.

> Now I was pretty much vilified by some boaters that said this only
> applied to "compulsory" ships when I brought this up in the boating
> venue. But it seems to me that the ONLY exception to keeping equipment
> separated is specific to "voluntary" ships. Although nobody - including
> the FCC has been able to show me a ruling, or anything else, that
> provides for more exceptions.

The definiton is that -voluntary' in this case means that the
antenna is not hooked up to one that is serving a radio that
is -required equipment- by the Coast Guard under the licensin
requirements of the ship. If the ship is -required- to have a
HF rig standing a listening watch on 2182, then the 'voluntary'
radios (IE: Ones that are just there because you feel like having
them) cannot be hooked to the same antenna.

The definition is about "compulsory ships radio stations",
not "compulsory ships".

> Since we are talking about planes -
>
> How are you going to comply with 97.11(b), and still use the radio
> (after modification, I assume) for BOTH amateur and aircraft
> communications?

This is an -emergency- radio that I will use airpane-side in the bush
(camping from bushplane) and will -normally- be used on the ham bands
to talk to my buddies to let them know I am OK. The aviation band
requirement is in case I break a leg out in the woods, and need assistance.
In this case I am allowed to emit anything I like, from any radio that I
have access to, and no licensing is required. (fact).

> [I would imagine that sailors are tuning backstays with external tuners]

So it would seem. If I strung a dipole rather than a random
wire, would this make the selection of a radio with an
internal tuner a bit easier? I may have typed too quickly
when I wrote 'long wire', when I really meant 'field strung
wire antenna of any design'.

Help!!

Has anyone else had a problem using the programming cable for the V7A? For the most part, the cable works (I can read/write from/to the v7a's memory channels), the problem is after the read or write is complete the radio goes into transmit! The only way to unkey is to power off the radio and disconnect the cable. I've tried 2 different cables, 2 different computers, and 2 different v7a's, but still see exactly the same problem. I'm using a Radio Shack db9 - db25 adapter cable, which according to Kenwood, is ok. Thoughts anyone???

I�ve had the same problems with my Microphones that goes with both of my TM-733�s. I've had to repair all 3 of my Kenwoods microphone PTT switches. One of them being a TM-261A, but same microphone, the newer one. The switches still clicked/ but didn�t work. Kenwood repaired the first one, under warranty, I did the other two. These are the newer style back light DTMF, I found a replacement from Digi-Key. Digi-Key Part number SW408-ND, this is 150g force. If you like a lighter feel, then I would go with ... Digi-Key Part number SW407-ND, this is 100g force. These are made by Omron, minimum life is 300,000 cycles, and drop right in place, perfect fit. Should last a little while, cost...45cents. I have well over a year, since I replaced them, still not a problem one. I desoldered them without taking the boards apart. Also on mine the lock switch on the back kept getting switched accidentally, so I removed the plastic top of the switch, easily done, and covered the hole with a thin piece of hard black plastic. Didn�t use it, and it was frustrating to go to use the mic and couldn�t change channels.

They do have a minimum order
Digi-Key # 800-344-4539
I hope this helps,
Zac... KF6ATH

3057. Attn: Yaesu FT-530 Owners - No Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-01 00:00:00 UTC
From: kucharsk@skywarn.dr.lucent.com
Message-ID: <F39Gps.6KK@drnews.dr.lucent.com>
Source record: 124301

Just a quick "heads up" if you weren't already aware:

My FNB-25 recently went bad and I decided to order a new one. Turns out Yaesu has discontinued ALL the battery packs for the FT-530, except for the "AA" battery pack. AES was out of FNB-25s and only had a handful of the 12v batteries left, and HRO had a similar lack of product. Unfortunately, at this time no third party makes 530 battery packs either.

In short, if you don't already have the 12v cord, I would get one now...

(OtoH, the FT-51 is down to $397, so if you were planning on spending a bit on battery packs it might be worthwhile just to convert now, which is I'm sure what Yaesu's thinking on the subject is...)

From: Ken Bickel <ac4vv@RemoveTHISqsl.net>
Message-ID: <73vg0rbaq1@news.megsinet.net>
Source record: 124304

A friend just got a new VM7A Kenwood (the blue display) and already hates the display (can't see it in bright light). The second thing he complained about was the intermod - it was eating him up and he had not experienced that with other radios.

If the FT8100 by Yaesu works as well as my FT8000 I'd buy one in a heartbeat. I have occasional bursts of intermod, but nothing like other rigs I've had. One feature it has that others do no seem to have is one way repeat (like a vehicle extender). Most of the time you can hear the repeater, just can't hit it with the rubber dummy load. One way lets you use the transmitter in the car without repeating back to you. You can even use the phone patch this way.

No experience at all with Icom so will pass on only my pleasure with the Yaesu FT8000.

I have used a TS-520S for two years and am quite pleased with it. It has good audio and puts out a solid 100w. You will not find many people who will say something bad about it.

If you operate a lot of CW, like me, you will want to have the optional CW filter. You can get by with a homemade audio filter until you find one.

The rig does not cover the 10, 18, and 24 MHz bands, if that is important to you.

I do feel that $350 is a little too much for that rig. I got mine, including the Kenwood mike, for $200 two years ago, and it was in pristine condition. For $350 you could pick up some later Kenwood gear like a TS820 or TS530 (similar to the 520 but included the 10, 18, and 24 MHz bands).

73s and good luck
Tom

The answer is yes! The Hamcomm interface will operate many modes, including a few you did not mention - Hellschreiber (Feld-Hell), HFFAX, SSTV.

It is really easy to build a Hamcomm interface. I suggest you check http://www.accessone.com/~tmayhan/ for details.

For info on Hellschreiber, which is gaining a renewed interest the world over, check http://members.xoom.com/ZL1BPU/Contents.html

The Hamcomm softwaare includes a simple spectruim display.

I am thinking of purchasing an FT-847 but live in a high RF area
and don't want to make a mistake, I live about 1000 feet from San
Francisco's major TV and FM transmitting tower which also has a
variety of pager a cell transmitters thrown in to brighten up the
neighborhood. RFI abounds. It's on all TV's, screwing up cable
reception, and you are pleasantly serenaded while on the phone.
I have found that on VHF some rigs have very little problem, and
some are badly handicapped. I can't use my Alinco HT at all (what do
you want for $88) and the IC706 MkII is a real disappointment. On the
other hand my old Azden PCS 5000 is totally clean, and the Yaesu
FT-8500 is close. Any guesses where an FT-847 would fit in?

Boy, did you pick the right time to get a new dual-bander. Tech America (www.techam.com) has the Alinco DR-610 on sale right now for $349.00! I picked mine up today. It meets all of your requirements except CTCSS decode, which is an $85 option. It will also expand to 120 memories with a memory expansion module which I don't know how much that one costs. If you blow it out all the way, it may push the cost of, say the 8500.

Something to look at.

Source record: 124319

Charlie,

If you look at the general prices of your selections, you'll see that they generally fall into different price ranges. Radios in the

-- high --
FT1000MP
TS870S
Ten Tec Omni VI+
IC756

-- medium --
FT847
IC746

-- low --
TS570D

There are other radios in these categories, these are just the ones you mentioned.

Generally, you will find that the more you pay, the more you get. Your budget would allow you to get radios from the top category here and I don't think you would be disappointed with any of them. I only have direct experience with the IC756 and TS870S.

Of those, I find that IC756 is easier to use, but that once you figure it out, you can do more with the TS870S. Because of all the adjustments available on the 870, you may be able to pull out a few signals on it that you wouldn't have been able to on the 756. My biggest gripe with the 756 is the lack of filtering options - you can only add two optional filters. You can't add any optional filters to the 870, but you've got a ton of filters built in (all done with DSP), from a narrow 50 Hz on CW to a wide 7 KHz for AM (I don't know about FM).

If you are just a casual user, you may want to consider a TS570. Depending on the model, it could be half the cost of some of the other radios on your list. You could take the extra money and put up a better antenna.

Mark

It looks like you need a radio with a larger FM adjacent channel rejection. I looked up the Azden 7000H(I know you have the 5000) and it has one of 74db, the FT8500 has one of 74db. So, does the FT-847 have one of greater than 74 db? The FT-847 for 29MHz and 50MHz are above 80 but for 2m and 70cm it is at 68/69 db. There is a trade off between adjacent channel rejection and sensitivity. The FT-847 is extremely sensitive at 2m and 70cm therefore the adjacent channel rejection suffers a bit. Note, that the adjacent channel rejection of the 706 MkII is in the low 60's(very poor for where you live) but the adjacent channel rejection of the IC746 is 71db which is much better, this is for 2M and 6M. On 10M it is 60db. Remember adjacent channel rejection is for FM, Blocking Dynamic Range(BDR) is for CW/SSB. The IC746 is in the 120db range, the FT847 does not even come close to that. It is about 114db. If you do a lot of transmitting you need to look at the IMD because of your RF "rich" environment. The 706 does not even compare to the IC746 or the FT847 in terms of IMD. There are other ways to overcome unwanted RF signals, one of which is a directional antenna. From what I have just said the FT847 may not be your best choice but it is much better than the IC706 that you had! The best way to tell without analyzing the data to death is to find someone who will set it up at your house and let you "have at it". Sorry for the long worded response but I hope it helps. Maybe someone will respond to my response and tell me I am wrong. I just hope they tell me why :>)

i think the icom 2710h kicks butt.
al, n0jqx has one, got it after getting rid of the 8100 he bought at
dayton. lasted 2 weeks with him, did not like the receiver at all.
loves the 2710 and i've been 'allowed' to operate it several times =]

i think it is a very solid rig. especially the sensitivity and
selectivity of the receiver.

> observations about this rig. Any constructive comments, warnings, praise, or
> observations are welcome.

I bought a TS-520 (not the '520S, mind you) for $250 at a ham fest
about 2 years ago. It came with manual and schematics, and was in
excellent shape, but had no mike (I later bought the mike for $18).
As I recall, the 'S model adds 160M band. I agree with the other
poster - $350 sounds pretty steep.

These rigs consistently perform well, as many posts to this newsgroup
have attested over the last couple of years. For a budget-minded ham,
I consider a used TS-520 to be an excellent choice.

have fun!

3088. High SWR on 20 of tri-bander

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-01 00:00:00 UTC
From: guyzee@ibm.net
Message-ID: <3663FB78.94FF2F3B@ibm.net>
Source record: 124332
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

To all beam gurus,
I installed a 7 element tri-bander on 11/21.
The SWR was perfect (very good) across 20, 15, and 10.
The next day the SWR on 20 shot up, but the SWR on
15 and 10 was still good.
It is a 7 element tribander.
The beam has:
1) a full size 20 mtr reflector
2) a full size 15 mtr reflector
3) four elements forming a log cell for the 20, 15, and 10
meter driven elements. (one acts as reflector on 10)
4) a trapped director with 15 and 10 meter traps.
My theory in this problem is that the 20 meter reflector
changed length OR a 15 meter trap is bad.

Sometimes the SWR on 20 meters jumps up from 1.9:1 to
2.5:1 afters trying to operate for 20 minutes...

Looking at the following SWR vs. band chart, do you think
the trap is bad or the 20 meter reflector changed length,
since either can affect the 20 meter band SWR without changing
15 and 10. OR, is it possible that the balun could be bad just
on 20 meters...

Thanks to all who respond,
Guy Shields
W4GBU

I thought I would put in my comments on the V7A. I bought mine a couple of months ago and I still satisfied with it. It has all the features you are looking for.
Contrary to what was said before, the V7A will do both one way and two way crossband repeat. I use both depending on the circumstance.

The display does take some getting used to, but it needs to be setup for the particular time of day. Adjusting the contrast and brightness controls will make the display perfectly readable during the day. The V7A has four programmable memories where you can store these settings. I have daytime settings in memory one, nighttime settings in memory two, crossband repeat automatically comes on in memory three, and memory four is a crossband repeat with the display blacked out. That is handy when I leave the radio on at night for crossband, but if someone walks by the car, they don't see the display lit up.

Every one has different opinions so I guess that is why there are different radios. By advise is visit your local store and get them to hook up the different radios and try them out.

Cheers and 73 de Jeff VE3JTR

Source record: 124342

I have a new J-38 packed in a box marked Mcelroy Mfg Co, Littletown, Mass 1952...but base is stamped with Lionel "L" logo. I was the first to open the box....it was enclosed in another sealed envelop noting DoD re-packing in 1967 apparently for mothballing. Is this a mac key?? I have a dupe if a good trade is possible.

3101. My FT5200 trouble -Was: Opinions- Looking for...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <3665738A.A437A984@ccnet.com>
Source record: 124147

Wanted to say thanks to all that have responded to my request for information. Its getting me caught up with the latest products.

Someone asked if I knew what was wrong with my FT5200. Well - no. I am not sure I know what is wrong with it. But it won't even turn on now.

Here is what happened.

Started off when I noticed that the radio was turning off on its own after five or ten minutes. I would be driving along thinking that there was nobody talking, would look down, and the radio was off. Turned it back on - after a while, it would go off again.

By the next day I started really losing control of the radio. It would come on and stay on for a while. But if I tried to changed freqs - the VFO/Mem dial wouldn't respond. Then I noticed that when the thing "locked up" I couldn't even control the volume. Then found I couldn't turn the radio off either (of course it was still turning off on its own).

Its a remote install so I thought something was wrong with the cable. I checked the cable for shorts and continuity and it looks OK. I ran the radio with control head directly attached (no remote cable) and had same symptoms.

Within a couple of days the radio was completely dead. I can't turn it on now.

So now I am saying "maybe I should use this as an excuse to buy a new radio". But I like my 5200 - despite the fact that I wish it had more memories. It's has been a really good rig. Seven years in three vehicles. It has served with honor.

So now I have been thinking. I did a freq mod to the radio when I got it. The mod was in the control head. After thinking about it, I seem to recall that there is a small battery in the control head. The head is pain in the neck to disassemble and put back together...but

... am I remembering correctly? Is there a battery in there? And could the symptoms I experienced be the result of a dead battery?

Regards

KD6ELA

3119. Re: How does MFJ's 784B DSP,1026 noise eliminator work?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: M Johnson <silversq@ix.netcom.com>
Message-ID: <3665B384.A09B73EE@ix.netcom.com>
Source record: 124165

Hi Jeff

I just started using the 1026 and it seems to work good for the intermittent noise I get. It uses a separate sense antenna and rf amp to receive the same noise the main antenna is receiving. Then you use a gain control and phase control to mix the two signals. When you get the phase 180 degrees out and the amplitude the same as on the main antenna the noise is canceled out.

You do have to re-adjust if you change frequency very far.

cyberkat2@my-dejanews.com wrote:

To the gurus,

Which is the best anti-oxidant for antenna construction?
Penetrox or Noalox? What have you found is the best?

The Noalox doesn't appear to have the normal
metal particles that provide continuity and tooth
to the beam elements.

Has anyone had problems with this Noalox anti-oxidant?

Guy Shields

Does any one have an idea how to increase the transmission range on those 900 Mhz Cordless Phones? I have an AT&T 900 Mhz Cordless Phone model 9100 I opened the inside metal box which encloses the RF TX/RX circuitry but I'm not getting any signal reading on my scope or meters not from the antenna and not from anywhere inside that mental box now how could this machine transmit almost a block and emitting such a low signal that I can't even detect? please any Information will be greatly appreciated tanks PS: the one block range is when I place the base high on my roof

3128. Info on Kenwood MC50 and MC80 mics?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: cabletek73@aol.com
Message-ID: <19981202180613.05218.00000646@ng-cg1.aol.com>
Source record: 124174

Can anyone tell me if the MC50 and the MC80 desk top mics for kenwood radios have the pre-amp option in them? I plan on running one on the 707 mobile and would like the pre amp, Ive heard non preamp mics on the 707 and they sound very low (MC60)..

Any info would be appreciated.
Thanks,
Rod

> sale. Thanks for your help.

Yes, I think so -- it has a nice selection of "bells and whistles" yet
is simple to operate. Assuming the radio is in OK shape, $450 (as you
posted in your other message) seems like a good value; the radio sold
for about $2.5k in 1980. I think I've heard of used ones going for
$600-700 but there isn't a big market for them.

There are a lot of options available for it: multiple narrow filters
(very nice for CW and digital modes), an FM adapter, a built-in keyer,
even a mobile power cord (if you have a Suburban for your mobile!).

I've had one as my sole HF rig (except for my mobile rig) since then and
I have no desire to replace it.

YMMV. Good luck with your Novice test and welcome to the hobby.

LMAO!!! RF concerns huh? Well, don't let those little RF's worry you. I am a TV Broadcast engineer and 580 feet above the building I work in is a UHF transmitter that puts out an effective ERP of 1.2 megawatts! There is so much RF that we never have to flip the lights on (unless the transmitter goes out). The florescent tubes burn all by themselves :) If you step outside the door and turn in a circle you can count 56 commercial antennas! (3 more of these are other television stations). Hell, I can stand and hold what most radios would put out ;)

RF you say, lol the Klystrode (a special klystron with a tetrode built in) tubes the Comark we use eats 31KW 3 phase and you wouldn't believe the amps! The electricity bill is just over $5,000 a month. The senior engineer I work with is 75 years old and he has been working in that type of environment since 1947! Healthy as a horse. Forget about the RF myth my friend, It has absolutely no foundation. Besides, have you considered how much RF is comming from the wiring in every room in your house? How 'bout all those lights at work? Your TV and Computer screens? The frig, the stove and the air conditioner? How bout all those high-voltage lines at the end of your yard? Go ahead and feed with the ladderline and save all that coax loss, I do. CU Mitch 73 AE4YW

Will also do 1.2 and 2.4 GHz with the two extra modules as well as ATV with the TV-970 adapter and wide band receiver 50 MHz to 905 MHz with the General Coverage Receiver module. They work great. I have one and so does my brother Jim, KA8HAK. Ten watts on 1.2 GHz and 1 watt on 2.4 GHz. The modules are hard to find now.

Where'd ya get the 900 Mhz Scope, and how many Thousand Dollars did it
cost ya?
I've got a real nice dual trace scope from Sencore, but it's only good
to around 140 Mhz. Anything above that it won't see!

Richard Carroll <w0ex@scan.missouri.org> writes:
>Really? I always thought that was the highest frequency that it would display a
>single
>cycle of a sine wave. It should show an indication of RF way above that. Probably
>even at 900mc.

The bandwidth rating of the scope refers to the amplitude of the signal
displayed, not the sweep speed (and thus how many cycles will be visible).

If a scope is rated at 100 MHz, it means that the frequency response of
the scope is 3 dB down at 100 MHz. That in turn means that a 100 MHz
sine wave will be displayed with an amplitude that is too small by a
factor of 1/sqrt(2).

Even higher frequencies are displayed at further reduced amplitudes,
but the spec doesn't necessarily say how fast the vertical response
of the scope rolls off. Since there are multiple stages involved, and
all of them are likely to start rolling off at some frequency, the
ultimate slope of the frequency response curve is likely to be much
steeper than 6 dB/octave (what you'd get with a simple low-pass filter).

So a 100 MHz scope will likely still display something at 200 MHz (though
it may not trigger on it). But 900 MHz may be totally invisible.

I want to make a loop antenna for my YB-400 for MW dxing and find I must have one of the old plate type variable capacitors like older radios used for the tuner. It is to be a 365pf rated capacitor. Does anyone know of a source for these, and/or can a trimmer capacitor that was rated from 80-1000pf be substituted. I think I did run across one of these in a catalog. BTW Mouser electronics has their catalog out in CD form if you request it, rather neat way to browse.

Message-ID: <Pine.SUN.3.95.981202003718.536D-100000@adore.lightlink.com>
Source record: 124265

You mean, they are still produced????

I remember them popping up in the early eighties in Germany, in ham radio ads that is, and I would be surprised if they still were in production some 15 years later. if so, why don't they pop up in American ham ads? After all, we are approaching Xmas, and those cute Mizuhos would make great stocking fillers. They would sell like hotcakes....

Message-ID: <742lc1$eto@dfw-ixnews4.ix.netcom.com>
Source record: 124266

What a great response to this request for help. I got 12 replies.
Thanks to all who took the time to write. A friend from a local traffic
net is making a copy of the manual but the information on soldering the
ports rather than using switches was just what I needed. I guess all
those manual copies I have sent to folks over the years are comming
home to roost.

3168. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <742np2$fl4@news.Hawaii.Edu>
Source record: 124267
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6OO
(rec.radio.amateur working-group)

3170. High-end HF radio recommendations

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: diale.nospam@mindspring.com
Message-ID: <3664ebc4.84232912@news.mindspring.com>
Source record: 124269

Gentlemen (and Ladies),

I have been shopping around a little for a new HF rig on the upper end, and have looked at the pictures and read the specs. I know nothing beats sitting down and actually using the equipment, and most of you have much greater experience using these radios than I.

My question is, considering Kenwood's TS-950, Yaesu's FT-1000D or MP, or ICOM's IC-775 or 756, what are the best assets with respect to quality, features, useability, etc.?? Any one shine above the rest?

Thanks in advance

> in a wheelchair, and that can be interesting without help.
> Anyont think there are any concerns?

With only a barefoot transceiver and an outdoor antenna, I personally would not be concerned. But the fields in the shack come from several sources including leakage from equipment, leakage from the cable, radiation from the antenna and radiation from common mode currents on the cable. And the only one of these which is amenable to calculation is antenna radiation, and even that calculation will require assumptions which may not be valid.

If you want to be certain about this, then there is no substitute to measurement. But I don't know of any available instruments which are accuate and priced to be bought and used by amateurs. If and when accurate and affordable equipment does become available then I will definitely be in the line to buy one.

Regards,

Heath SA2500 automatic tuner wanted.
Please advise price/condition.

3179. MINT DRAKE TR7/PS7/RV75/MS7

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: cslc82@email.mot.com
Message-ID: <366a4212.141304234@netnews.worldnet.att.net>
Source record: 124278

Mint Drake 7-line station:

TR7 transceiver with All "A" mods, FA7 fan, 2300/1800/500/300 Hz filters, Noise Blanker, original operator's manual and orignal service manual (no copies);

PS7 power supply with FA7 fan and original operator's manual with schematic;

RV75 synthesized VFO with TR7 interface cable and original operator's manual with schematic.

MS7 speaker.

The TR7 is a "9+" and looks great; front panel and interior are immaculate. One minor (< 1/16" ding on top right chrome trim). The TR7 has the WARC band mods. The PS7 is a "9" with a few minor scratches on the front panel and top cover. Interior is real good. The RV75 is a "9++" inside and out. All items work great, all pilot lights work.

$1000, includes FEDEX freight anywhere in US.Shipped in original Drake boxes.

Will send digital pix or other info on request.

Still it's a good point though Roy,

When you plug the PL-259 into the back of your rig you are creating a ground loop between the vertical and your house safety ground. I've often wondered about this (trying not to be tooooo anal-retentive). I guess if you really want to avoid the ground loop you'll have to dig up your radials and elevate them (not that I wish to resurect the "elevated radial" thread again on this newsgroup). :-)

3188. How does MFJ's 784B DSP,1026 noise eliminator work?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: cyberkat2@my-dejanews.com
Message-ID: <743rot$u3f$1@nnrp1.dejanews.com>
Source record: 124287

I am looking real hard at the MFJ 784B DSP unit and the 1026 noise eliminator. Where I live there is a lot line noise, static, etc and it is driving me nuts. I need to eliminate most of it to enhance my enjoyment of HF. Those of you that have these 2 units could you let me know how well they work and any drawbacks to the units? I have a manual MFJ noise unit that helps but I need some heavy duty stuff!

Thanks!

Jeff

3189. Computer programming ADI AT-600

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: merbaugh@infinet.com
Message-ID: <36666143.1327243@news2.infinet.com>
Source record: 124288

Does anyone have any info on the cable required for connecting an ADI AT-600 to a serial port and/or the programming protocol? Is there a free program available for programming the AT-600? ADI sells a programming kit for $40, but I'd thought I'd explore other alternatives.

3190. FS: Kenwood TS-570D(G) with IRAD 400Hz CW filter

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-02 00:00:00 UTC
From: "David E. Shelton" <w4des@iolky.com>
Message-ID: <3665681B.499BCEA0@iolky.com>
Source record: 124289
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For Sale a brand new Kenwood TS-570D (G) model with a IRAD 400Hz CW filter.
This rig is only 5 months old and is just back from Kenwood Service Center
East for the (G) upgrade. The upgraded model works superb offering added

versatility on both CW and SSB. I currently have a TS-870S and do not need
a second rig so I am selling this one. The rig has 6 1/2 months left on the
factory warranty but like I said this rig was just back from Kenwood Service and is in perfect condition. I have all the orginal boxes, manuals,
power cord, hand mic, and computer software to run the rig via your PC's

serial port. AES sells the TS-570D(G) new for $1198 and this rig has a $100
filter installed, if you are a op with need of a nice rig here you can save
$250.

Price: $1025 (firm) shipped

Been a couple years, but as I remember T-Zone and X-One in
Akihabara used to carry these. There were a few other small ham
shops around there that carried this model, as well as the
other bands.

Best bet is to get a copy of JAPAN CQ or LETS HAMMING magazines --
lots of advertisements in the back, including phone and fax
numbers. Send a fax and see what happens. You might
also try http://www.tzone.com.jp.

It is unlikely that you have fields in excess of the exposure limit with
your setup, but contrary to what some may say, coax can radiate if
there are common mode currents on it. That may be the case with
a G5RV unless it uses a good choke balun at the connection point
to the balanced line. (Some do, some don't.)

To be on the conservative side, I'd clean that mess of coax up off
the floor and either cut it to length or hang the excess well out of
the way of the operator (distance is your friend in dealing with
RF exposure).

>lot's of noise at my QTH from various sources at various times. How do those
>2 units work?
>
>Jeff

Jeff,

I just got an MFJ-1026 in an attempt to reduce some local power company noise. I played with it for a couple of hours and I think it's going back to the store. It may be that my unit was defective, but I was unable to null anything. As part of the set up exercise, they have you tune a strong, continuous signal (I used WWV) and null it. I had no luck

Also, to null a signal you adjust a phase adjustment knob. The movement of the knob on my unit was not smooth and thus, very difficult to make fine adjustments. It is possible that that was why I couldn't null anything.

There were also two things that I found out only after reading the manual (they weren't mentioned in the ads).

1) Although the unit has an internal active antenna, they recommend using an external antenna. I found that to be true. With my beam as the main antenna, the only way I could match the gains of the main and aux (internal active antenna) was to crank the main antenna gain down to practically nothing.

2) The unit needs to be installed between the radio and the antenna tuner. This is difficult to do with a radio with a built in tuner. The manual mentions this fact and say that when a built-in tuner is used that the 1026 can only be used when the SWR without the tuner is < 2.0:1.

Hi Dan,

Nope, not an offer. Even though this is a very desirable
package. I have lots of Drake equipment (tube). The only thing
better than a nice TR7 is having the RV75 to eliminate the drift.
I think your use of the word MINT in the subject line may be
misleading. In my mind MINT means truly like new, not "pretty
mint for it's age". I'd call your unit "excellent". 8-)

3200. FORSALE(or trade), Best offer, Tinsley Labs classical cass telescope

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <746mh0$9ju@nntpb.cb.lucent.com>
Source record: 124051
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I MUST sell this asap -- best offer takes this beautiful
classic telescope. An EXCELLENT value for someone who wants
a classic, top quality scope.
Contact me at 732-949-0664 or via e-mail.

Original ad follows:

FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm was asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but am open to offers. Please, I must
find a good home for this; make a bid!

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino

wrote:

> Thanks for reading this. I need a schematic or manual for an HP 427 volt-ohm
> meter. I'd be glad to pay postage and reproduction costs.

> John

John, if your local library has a copy of Howard Tremaine's _Audio
Cyclopedia_, you'll find a reproduction of the schematic for the HP 427A in
the test equipment chapter. Unfortunately the schematic (which is AFAIK
repro'd directly from HP artwork) lacks part numbers for the
semiconductors, which could be a problem if the stampings on the devices in
your 427 are illegible or incomplete.

Good luck...

Hi,
I have had my Q7A almost a week now. :-)
I am verry impressed with the recieve, 0.005mhz-1999.995mhz w/clone mod.
With stock ducky ant. i can usually recive at least one of the WWV in co.
(I'm in Wa.)
Scan is rather slow, operation of radio is hard to learn (only 7 buttons)
I wish for SSB, extended Tx.(70cm.-GMRS) & cell rcv.
I don't have a ticket (yet) so i don't know if low tx. power
is a problem in my area.
Randy

You can get good repro manuals from http://www.w7fg.com/

The operation manual is 18.00 and the service manual is 20.00 + shipping

I just got a service manual for a 520S from them and was very happy with
there service.

3222. Interference on HF, Any suggestions?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: Rick Miller <spamfree.rdmiller@bit-net.com>
Message-ID: <36673AE1.396C@bit-net.com>
Source record: 124073
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

For the past several weeks I have been observing interference
on the HF band. Here are some of my observations:

1) The interference sounds like raspy static.
2) The signal is several KHz wide.
3) It occurs ~ every 117 KHz.
4) I have tracked it as far down the HF spectrum as 1.9 MHz.
5) It tends to drift in frequency up and down the band.
6) It seems to be several S units louder than the background noise
level, but not a function of the background noise.
7) I have ovserved it on 2 different radios, with all other equipment
turned off (I think).
8) I have observed it outside the house with a loop antenna hooked
to my broadband scanner.
9) It seems always to be present. I have not turned the radio on when
I could not find it.

I suspect it may be leakage from the cable company, but they tell me
that if it were leakage, my TV picture would be degrade. I'm not
entirely sure I aggree with this. And I see evidence of work at 2 of
their polls at the edge of my property in the last few weeks.

Do the characteristics of this signal point to any particular service?
The main problem is that it disrupts my activity on 10 meters. I'm
located in central NH.

Any suggestions would be appreciated.

3237. Re: How does MFJ's 784B DSP,1026 noise eliminator work?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: Ken Bickel <ac4vv@RemoveTHISqsl.net>
Message-ID: <744mal$680$1@news.megsinet.net>
Source record: 124096

Have used the 1026 for about a year or so and would not want to be without it! I can reduce an S5 noise level to S0. It did take some playing around with noise antennas, but it works quite well. Have also used it for some diversity reception (horizontal antenna as a main and a vertical as a noise antenna). The results can be quite surprising.

I also use a Timewavy DSP-599zx. The combination of the Timewave and 1026 are an unbeatable combination.

Vax,

I own a TH-G71a -- and I am quite pleased with the performance of
it... It is very "user-friendly" and as far as mods go, you can snip
one diode for MARS, and snip two diodes (one of them is the one for
MARS) and open up the TX from 130MHz to 174MHz, and from 400MHz to
470MHz, and also open up the 300MHz band for rx and also the 800MHz
band for rx also... (cell blocked) I purchased this little rig for
the same reasons as you... It was one of my first rigs (I've only been
licensed for about 6 months now) and I still use it quite a bit. I
also do packet with it.

HOWEVER!!!
Save your money on the leather case... I bought this and do not like
it one bit. I have also trgied various "non-Kenwood" cases. It is
VERY difficult to press buttons...

Why would you not add the JRC JST-245 to your list? Just wondering.

I remember seeing them in Japan - they were available for all bands 160
through 2-Meters. I bought a 40-Meter one while in Akihabara once, and
I use it for tracking down noise in the neighborhood. I also bought a couple
of the 10-Meter Mizuho long whips to use on a pair of 10-Meter FM Azden
HT's. The receivers in the Mizuho were really excellent. I haven't seen a
recent CQ Ham Radio Japanese magazine in a while, so not sure if they're
still available or not (they also had lots of little accessories like
outboard 10-watt linear amps, etc.) Just not enough of a market in the US
to do serious exporting them over here.

Really? I always thought that was the highest frequency that it would display a
single
cycle of a sine wave. It should show an indication of RF way above that. Probably
even at 900mc.

Don't know about the MFJ supply but if you're looking for a good 13.8VDCswitchmode supply, get the Samlex unit from Tech America. It's rated 23 amps
continuous, 25 amps intermittant, is compact and lightweight, is made in Tiawan not China
and is excellent. I bought one and am very pleased with it. $79.95.
You should be able to find it at >www.techam.com< or their latest flyer.

Last Weekend I purchased a DJ-X10T.

I have no complaints about its recieve capability. I can consistantly get WWV on 2.5Mhz at a strong S7 around 3 AM local time, (Kansas City) with the supplied "rubber duck" antenna.

All in all, it is a nice little raido, it suffices for an apartment dweller like me who cant put up a good dipole.

Source record: 124121

I had been QRT since 1982, let my license lapse (stupid, but I did it). Recently took and passed my General (attempting Advanced and possibly Extra this month, shudder).

Anyhow, I went to the local amateur radio store (Radio City) with the intent of coming home with a super high tech, do everything, computerized-to-death rig.

Even though I'm a software engineer by trade, I find the new rigs sort of intimidating...and I ended up buying a beautiful, used Kenwood TS-940S. What a delightful rig! I got on the air on 40M last night, CW, and worked 9 countries in a two hour period!

I am just delighted with my purchase. Back in the 1970s I had bought a Kenwood TS-820S during the first month it was available in the US and just loved the thing. I think maybe the reason I like this rig so well is that it kind of reminds me of the 820.

Anyhow, it is wonderful to be back, and I'd also like to say that I think one thing has not changed about amateur radio over the years: the people! On average hams are still the friendliest, best natured bunch of folks I've ever encountered. Thanks for keeping the hobby alive!

I'm wondering what the model name is for a particular Motorola mobile radio I've seen in police vehicles. They appear to be 10 channel, each channel having it's own push-button to put it in the scan list, and marked "NP". Looks like that only controls receive, as a seperate unit selects the TX channel. Please e-mail with any info you have about these radios.

Thank you

The problem is ADMS does NOT work under NT. I have the same setup and had to dedicate and old Win95 computer just to program my radio. I have called RT Systems (the ones who wrote ADMS) and they were not very responsive to fixing the problem. An interesting note- I also have an Icom Q7A and the shareware cloning software and it works fine under NT using the Yaesu programming cable that came with the ADAMS kit.

Good Luck- Jim KA8ZGP

Where did this price come from "Dreamland"?

3273. TH-79's SAVE mode and 1k2 packet

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: Arjen Raateland <Arjen.Raateland@vyh.fi>
Message-ID: <36669B38.352@vyh.fi>
Source record: 124132

If one runs 1k2 packet with a Kenwood TH-79, it is apparently necessary to disable the SAVE-mode in the rig's menu. If it's ON, the rig regularly misses e.g. the first FBB UNPROTO update after an update request. Other than that I haven't noticed problems with this rig or it's settings.

It's quite embarrassing, as your station will keep asking for the same FBB message list updates over and over, until the rig happens to be already 'awake' when the first update comes in, which depends on response time from the BBS and channel traffic intensity. The RX seems to go to sleep very soon after the last signal came in and it looks like the RX is not even woken up by the rig's own transmission of the request.

It took me quite some time to figure this out. The TH-79 manual that I have doesn't say anything about the deleterious effect to packet radio use, AFAIK. The default mode is SAVE enabled (ON).

If you are an ARRL member, you could check the members only sight
for a review on both models. I know they have one on the 990 - that's
what I have, and for whatever this is worth - I wouldn't trade it for
nothin' From a used price/performance standpoint I think it is one
great radio.

>450/830/930/940/950/960 transceivers.

Just a note. Filters that work for the 450 ... series will NOT
work correctly for the 830. The 830 specs out a different
center frequency for the CW filters than the others do. I
know, I have been there :-) . I believe the 103 and 104 filters will
not work in the 830, but is designed for the others. (What is
a Kenwood 960?)

Excellent filters, use them myself.

For some time, we used Micor's in a similar fashion for the Dept. of Highways. The control heads that were used with those radios were 8ch. pushbutton scan select, and the TX freq was set by a rotary switch on the head. The TX chan number would correspond to the number of the scan chan number. If memory serves me correctly, we also used the same head on Mocom 70's and Mitek's. Hope that helps some. I don't think I have a manual left for the head, but will take a look if so, will post a message. 73 de VE6INM (Glenn)

3279. Radio Shack Weather Alert Radio problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <3666B7F0.4C4D@acm.org>
Source record: 124138

I have a Radio Shack 7-Channel Weatheradioï¿½ with NWR-SAME decoding (model 12-249) which recently developed a problem. It was failing to go off during the weekly Weather Service tests and was displaying "CHECK OP" on its LCD display. Further testing revealed it would not decode any alert transmissions even though the radio reception was working fine. I ordered a copy of the service manual from Radio Shack National Parts and, after doing some testing, discovered that the radios SAME decoder was slightly out of alignment. The radio had been on almost continuously since February 1998 and there was probably some slight change in some of the component tolerances. A slight adjustment to resistor "R2" per the alignment instructions fixed the problem.

Many hams, like myself, are using these radios in conjunction with Skywarn. If you have one, I would recommend making certain that it passes the weekly alert test that the weather service broadcasts. If it displays "CHECK OP" for more than one week, it may be in need of a decoder adjustment (occassionally the weather service skips a weekly test if there is a possibility of severe weather). Note that the radio must be on continuously for at least a week for the "CHECK OP" to come on. If you turn the radio off periodically at intervals of less than a week, the problem may exist but you will never see this message as the radio gets reset when powered off.

Owing to a form of as yet undiagnosed insanity I have decided to start a rest home for RA 17's and there associated parts. That doesn't mean to say I'm going to start running around buying everyone that comes my way, what I'm looking for are those sets that you've been meaning to throw away but haven't had the heart, working or not, they are after all still good sets and do get sold from time to time. I will however consider reasonable prices and please keep in mind that I live in Somerset so collection is going to be an important factor. The sets will not be for re-sale even as spares so don't worry about someone cashing in on your generosity, easy for me to say but true, once I've got em nobody's getting em off me, I may consider passing on parts to other needy soles foc apart from postage, some bits could be heavy. Please email me with the details of what you've got and where you are. Is anyone already doing this ?

Hi Herb,Just curious. How would doubling the voltage change the crystal based oscillator frequency? Also how would doubling the voltage change the 1200 Baud Bell Standard modulation scheme to the CCITT based 2400 modulation scheme.

On the other hand if we reduced the voltage from 5 to 1.25 could we use the modem for rtty? ;-)

Me thinkuth you are tugging our leg.... (grin)

3287. ADMS can't write to my 50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-03 00:00:00 UTC
From: steve@slac.com
Message-ID: <744n25moh1@nnrp1.dejanews.com>
Source record: 124193

Does anyone have any insight as to why my brand spankin' new ADMS 1D won't program my 50R? I made a template, blew away a bunch of stuff I had in the radio, and the software bombs at 60% every single time I try to rewrite the memory. And this is no matter how big the memory file is.. three entries or 60 it *always* fails at 60%. I'm running a P166 with NT workstation. The software won't even install under OS/2, and I dare ask about any comparable software for Linux.

Any insight would be appreciated. All I have now is an empty radio.

BTW, the error on the PC is "Timeout waiting for FT-50 response" and the error on the radio is CERR.

73, and better luck with yours!

Steve

A long, long time ago radio shack sold a dual variable power supply kit. The two supplies could either be independent or tracking. The supplies put out 0-20 volts at 0-1 amp. The circuit had voltage crowbar and current limiting. The "kit" consisted of a bare board and an instruction manual. National parts cannot help me until I come up with a part number. I cannot find a part number on the board. If anyone has any approx. 20 year old Radio Shack catalogs --- please look in the kit section. Please email me the part number if you find it.

Or If you have a manual - then I would be happy to pay you for copying the pages for me.

thanks for the effort

Randy,

I believe the COMx type interface used to connect to a computer is strictly for the command-type operation of the 570 from a computer... although I'd like to be proven incorrect. For Morse, you need to attach something to the AT 13-pin connector like a TNC that has Morse capability. GL

First a word of caution here. These units are hard on finals especially when used in packet applications. About 70% of all owners have, over time, replaced the finals. Inadequate heat sinking?, not sure here. As for price. The current model 2100H is $194 new and about $160 used and the 229 is two models behind it so certainly not over $125. I wouldn't pay over $100 used in good shape. The 228 and older IC28 are better units. People are asking $175 to $200 for them which is rediculous considering the price of a new IC2100H.

From: George Andrews <mauser2@erols.com>
Message-ID: <749vpl$4tv$1@winter.news.rcn.net>
Source record: 123956

The HTX 242 is not a scanner. It is a 2 meter amateur radio transceiver. It is perfectly legal to extend the transmit and receive capability for providing MARS/CAP frequency coverage for those who have a license to transmit on such frequencies. I also modify many of my transceivers for the purpose of receiving the weather frequencies. This is not prohibited by any regulation.

3302. Re: TS-870 vs FT-1000

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-04 00:00:00 UTC
From: Nulmar Fronchitte <yugmol@opsnil.net>
Message-ID: <74a5kc$n2o$1@news3.mr.net>
Source record: 123958

A TS 870 vs. a FT1000 is kinda like a Chevrolet vs. a Rolls Royce. Front end overload and intermod problems beset the 870 while you don't even think of this with the 1000. An older TS850 is a better choice than the 870. There is no real comparison here. A better vs. situation would be perhaps. A FT1000 vs. an IC756. Here you have a radio for the serious amateur vs. a really fun radio that along the way gives very decent performance and some people say they don't ever again want to be without the new graphic display of the 756. Further things to consider are the recent lack of Kenwood support and deteriorating customer satisfaction. Kenwood, once the leader of the pack with their TS 520,820,530,830, 440, 450 and 850 radios has become the doormat of the industry with rigs beset with problems coupled with an inability to solve this problem and an unwillingness to deal satisfactorily with its customers. Kenwoods are currently good rigs to stay away from.

3303. Search Frequencies on a GP-68 UHF

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-04 00:00:00 UTC
From: Duane Park <dspark@ix.netcom.com>
Message-ID: <36689CDF.2731C38E@ix.netcom.com>
Source record: 123959

For those GP-68 UHF owners, I found out how to search the different bandsplits (430-470) ie. 445-449, 462-465, etc. while in the "dealer mode".
Program channel 19 rx for the low end that you want to search from, then

program channel 20 rx for the high end that you want to stop at, then get back into the "dealer mode" or I call it VFO, press Scan and the radio will
search between the low end of channel 19 to the high end of channel 20, then
repeat like a scanner.
This is really handy if you want to search frequencies in maybe a 1 mhz bw.
If anyone knows how to change to standard 5 mhz offset, other than a odd

split method which I already know how to, please let me know.

3307. MAHA a piece of crap

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-04 00:00:00 UTC
From: tvsjr <tvsjr@sprynet.com>
Message-ID: <74ad0v$3h2$1@juliana.sprynet.com>
Source record: 123963

Just a word of warning to anyone before purchasing a MAHA brand charger:

I have had two chargers (one bought, one warranty replacement) for my Yaesu FT-50RD. Neither of them worked like expected. Neither would stay in rapid charge for longer than 5 minutes, on different batteries. Furthermore, the pins are not long enough, so if you put the pack in it now, you hear a low arcing noise from the contacts to the pack- just what I want to put my pack through. I spent +$50 on this charger, now to have to go buy the real NC50 and the cups (~$130). A word to the wise- spend the extra money, it's worth it. And whatever you do, don't buy a MAHA brand charger. I don't know about their batteries, but the chargers need some serious redesign before they should be released as a viable product to the public.

Anyway, just my $.02- flame shields active...
Terry

3308. PC>Macintosh DB9>mini din pinouts

Message-ID: <3668C103.BAB72EFC@pacbell.net>
Source record: 123964

I have several Yaesu radios and have the ADMS program, which I am attempting to run under Virtual PC on my Mac. The program runs fine, but I haven't yet figured how to convert the Mac's mini din output to the DB9 input required for connection to the radio. Has anyone done this?

BTW, my Mac interfaces routinely with my Garmin GPS, with no problems....(both under Mac OS and under W95/Virtual PC)

thx...

I'm getting something here (Seattle) in a slightly different form, (same timing though, so it makes me think it's the same stuff). It adds a tinkle like sound to the weaker shortwave broadcasts, which I interpet as the beat from a high speed FM signal. Judging by the way it beats with fixed signals, there's a comb spectrum of signals. About every 10 kHz, but not exactly, as the tone of the beat with the other signals shifts as you tune across the band. The modulation seems to be in the 5-10 Hz range.

My guess is that it's a new over the horizon radar. The return of The Woodpecker in a slightly less obnoxious form.

It doesn't sound like cable TV leakage. All their signals are much higher than the frequencies you are hearing the noise on your HF receiver. That part about the TV signal being degraded if the cable was leaking is baloney, though.

From what you describe, the noise could be any of a hundred types of common everyday equipment types. For starters, put your receiver on battery and turn off the MAIN breaker to your house. This should eliminate anything within. If outside the house, I suggest you equip yourself with a battery source on your 10 M rig and traverse the neighbor looking for where the signal may be strongest. Shorten or eliminate your antenna to keep the noise from saturating your receiver until you believe you are at the source. Can't offer much help at this point as you will probably be needing to knock on doors and go from there.

HINT, if the signal gets too strong, keep tuning higher in frequency, (your scanner perhaps) to use the highest frequency you can hear it at as your source to locate.

Yep, it works that way with radios too. Just plug your 100 watt rig into 120 volts instead of 12 volts and you have an easy 1000 watts. You can use either AC or DC, either will bring the same results....

When I zero beat an incoming c.w. signal with the monitor tone on my IC-730 I am high in frequency on transmit. Is there a way to adjust the monitor tone so that when I zero-beat, it will be on the transmit frequency?

Picked up some Tubes they are Internantional Tubes
and have the Logo Fox Tango on them they guy says that they are for
the Yaesu FT 101 etc made for this type of Radio is this true any one
else use these tube in the FT 101 E etc.. like to know more about them
cause my AM wide band filter came from the same company Fox Tango
I herd that they were making these tubes for the Yaesu and putting
there logo on them to sell them for yaesu radios like FT 101's..
please help me out here thanks.. Mike

3331. Re: Antenna Info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-04 00:00:00 UTC
From: Elbjor Hymnesm <fjone@ryschel.net>
Message-ID: <748842$e7e$1@news3.mr.net>
Source record: 124014

Sounds like the antenna known as the "Mini Quad". It was made back in the late 70's and early 80's and then no more. At discontinuance, it sold for about $250. I bought mine for $65 but usually goes for about $100 to $125 today. It has a 5 ft boom, the front element is 12 ft and the rear "diamond" shaped is slightly longer and on its ends are circular hubs about 4 or 5 inches in diameter with brass spokes sticking out. These spokes are trimmed for what part of the band you want the antenna to load up in. It covers 6, 10 thru 20 meters. Can't remember if WARC bands are covered. Quite a narrow bandwidth, especially on 20 but a tuner takes care of that ok. I did load mine up on 40 with a tuner but it didn't seem to have any directionality there. It is decidedly better than a dipole in most cases but certainly not up to a full size beam. The whole thing turns quite nicely on an el cheapo TV rotor. If I recall correctly, about 6 db on 10 and 4 db on 20 meters was the gain.

Have you asked your local Air Training Corps? They have a Headquarters in the County, and that HQ has a Wing Signals Officer. Should be easy to contact. Our local ATC seems to bristle with RA17s. Still plenty of people maintaining them, too.

From: sconner4213@my-dejanews.com
Message-ID: <748mpk$2co$1@nnrp1.dejanews.com>
Source record: 124018

I am borrowing a friend's VX-1R for a few days, and tonight I put it in test mode to find the firmware version and it said A100. According to the Yaesu VX-1R mod site at http://www.icongrp.com/~sllewd/, the earliest firmware version available is A102. Anybody else out there have one this old? I did the test mode correctly (hold down AR while powering on the radio, then repeatedly press AR until the firmware version shows). The radio has the hardware mod for wideband TX/RX.

I had them both about four years ago, and if memory serves correctly, I think they were about equal to each other, bells and whistles aside...

I do remember that I preferred the Yaesu for cw...I had the 250 filter in it, and with the cw spot feature, it made for very enjoyable cw work...

Both are nice rigs, with die hard fans on both sides... :)

Hope this helps...

John

It could possibly be a TV set in your house or re-radiating from a neighbors
TV antenna. It could also be a defective TV amplifier in your/neighbors
house. And of course the cable system could be generating noise not only
from the actual TV signal, but from their switchable power supplies.

Likely problems with CATV is improperly grounded and/or terminated ports.
Sometimes the crews do not instal the terminating plugs at the amp's. This

allows leakage. And of course the F connectors are bad for poor ground connections.

It's not illegal to modify, engineer, or publish modifications on radios. It's illegal to transmit on frequencies you don't have a license. I don't appreciate your irrational thought process on the flame.

3345. Re: ADMS can't write to my 50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-04 00:00:00 UTC
From: crashdd@my-dejanews.com
Message-ID: <7490au$as3$1@nnrp1.dejanews.com>
Source record: 124028

I had the same trouble with my FT-50 and ADMS-1D under NT 4; it would always bomb near 60%. I too lost all the memory during the aborted upload attempts. I figured it was NT as well since I've had similar problems with other programs.

I called RT and they said to turn off the hardware FIFO buffer on the serial port I was using (COM2). I went into the Control Panel, selected Ports, selected to set up COM2, and found there was a check box to enable or disable the hardware FIFO. I disabled it, restarted NT and now the ADMS-1D works fine both reading and writing to the FT-50.

So, the program will work under NT. You've just got to select the right options. Its too bad RT doesn't document this as it appears to be a common problem (they gave me the answer immediately). Good luck!

Thanks everyone who helped with the Batt prob. I replaced it and its working fine!

2 more questions! heh

1.) What is that pot/var resit. on the bottom of the radio, where the piece is cut out so you can see it with the cover on?

2.) Where can I change the freq of the radio? it is 2.75Hz (or around there) off of freq.
and its always nice to have your radio on freq 8-)

Thanks to all for the help!

I have a Mac, and also wondered what the exact protocols were, since they
don't offer Mac software to program it.

I suppose someone would have to buy the software and cable and then
capture the data stream to see what's going on.

>having it's own push-button

What color was the control head? Was it white or brown? The white ones are
usually hooked to Micors and first generation Syntors. If it is a brown head,
it is most likely a Syntor X

Sorry, no info on the computer control portion yet. The dealer I purchased it from didnt have the software available yet, however, there is a beta version of the software on Alincos site, www.alinco.com , i didnt download it yet, waiting for the final release.

Wish i coiuld have been more help.

It could be a computer UPS. Mine developed a very similar problem after several years of usage. Think in terms of harmonics of a 100kc pulse width switching circuit with slow modulation of both the pulse width and the rate.

Ed:

Please have a peek at
http://www.universal-radio.com/catalog/hf_trxvr/0550.html

I am acquiring one of these used real soon and am real excited by two features: the auto-tracking tuned front end and the cascaded filter system.

Sure would have preferred that they offered a 13.8v option but the finals they use require much higher voltage. I'll just have to acquire an inverter for emergency use.

I have the following items for sale:

maker description model price comments

sony audio/video STR-AV300 $35 right speaker
receiver seem to
work properly,
everything else seems to
work properly

pioneer 6-disc changer PD-M500 $45 tried
it and works!

panasonic vcr PV-1366 $25
pretty sure it works

pioneer 6-disc changer PD-M401 $40
tried it and works!

sony dual cassette TC-W233 $20
tried it and works!
player/recorder

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals and remote if I can find it. All are in that Eighties electronic black and have a digital display exept the TC-W233 which was my very first audio component back in 198--something :) anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

I bought one today (12/5) from HRO in San Diego. Radio is $409 less $60
in discounts. DSP is $110: total is $559 plus tax. Software is included.

With all due respect, the price being asked for a used system is a bit
high, I think.

BTW, I am having problems installing the software under Windows 98. THis
is not an auspicious beginning.

Well... I bought it all new in October 98, I have over $700.00 invested. I have three additional software items I included, (not shareware), that I purchased also. Looks like you got a pretty good deal on the radio and DSP option, however. I did sell the system.

I never had any problems with the software... even had it running under WinNT 4.0!

Source record: 123856

For Sale:

MFJ 752c Signal Enhancer Dual Tunable SSB/CW Audio Filter.

Primary Filter:
Two section four pole variable filter which has PEAK, NOTCH, LOW PASS, and HIGH PASS functions.

Auxiliary Filter:
Single section two pole PEAK and NOTCH filter.

Front Panel Controls:
Power Switch which selects power OFF, power ON, SSB Noise Limiter, and CW noise limitier.

Function Selector selects PEAK, NOTCH, LOW PASS, or HIGH PASS in the primary filter section.

Selectivity controls (2) adjusts the bandwidth of the primary and auxiliary filter from 40Hz to almost flat.

Frequency controls adjust the center frequency of the peak, notch and the cutoff frequencies of the LOW PASS and HIGH PASS filters approximately 300Hz to 3000Hz.

It has a 2watt audio amplifier. It will operate on 9 to 18Vdc. It has two switch selectable inputs for two recievers. Headphone and speaker outputs.

Excellent condition.With original owners manual and carton.

3386. Re: TS570S connections to supermorse thru RCP2 software?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: Chuck Gainey <cgainey@mhv.net>
Message-ID: <74cfn0njv1@supernews.com>
Source record: 123861

Actually, I've connected the "line out" RCA jack on my SP-930 speaker to the MIC input (the red jack on a PCI64 Creative Labs sound card) and that seems to work just fine for SSTV reception, so you could probably get a Morse program to latch onto it somehow.

Chuck (K2NW)

3387. Re Ameritron AL-811 on 10 Meters

Sorry for the long length of this.
reply to jrhelvin@juno.com

Here is the list of some fine microwave stuff. This is all from private
collection and is all in fine to very-fine condition.

2 VECTRON 333.8MHz VCO $offer
1 Triangle Microwave yl-23 2-4GHz power divider $75.00
1 Krytar 102020010 2-20Ghz direct coupler $150.00
2 Midisco M3c-2040 2-4GHz circulator $75.00
1 pasternack pe-8401 2-4GHz circulator $75.00
2 watkins johnson m2gc mixers $75.00
1 minicircuits zel-1724ln 1.7-2.4Ghz lna $150.00
1 minicircuits zve-8g 2-8ghz amp 1watt $450.00
1 dorado micro 3ccb9d-1 circulator $75.00
1 minicircuits zlw-2 dc-4.3Ghz mixer $20.00
2 merrimac pdm-24-13g broad power divide $125.00
1 merrimac qhm-2m-12g broad power divide $125.00
5 minicircuits zem-4300 dc-4.3Ghz mixer $30.00
3 minicircuits zesc-2-11 10m-2ghz divider $30.00
3 minicircuits zfsc-2-10g power divider $30.00
1 Avantek av-7872 8-12ghz YIG $offer
2 pasternack pe6037 dc-18ghz 25W load $100.00

1 set tektronix wm-490 mixer set
18.5-325GHz gold anodized $2400.00

1 Varian twt tube vtm-6195r2
8-12Ghz 20W nominal $offer

1 Alpha Microwave 10.5Ghz Gunn cavity 10mw $35.00

1 Microwave Power 10.5 -11.5Ghz 10Watt
solid state amplifier. $offer

Let me know if interested and we will talk. Thanks and

Merry Christmas

3391. Re: Interference on HF, Any suggestions?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: Rick Miller <spamfree.rdmiller@bit-net.com>
Message-ID: <3669E129.D41@bit-net.com>
Source record: 123866
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I've received many good suggestions so far, and I appreciate the response. A lot of other folks seem to have a similar problem as well.

I have not "thrown the main breaker" yet, simply because I don't like the idea of having to go around and reset all the clocks, VCR's and anything else that blinks for my attention after an extended power outage. But, let me tell you what I found out last night.

I started suspecting the circuit that all of the radios were on because when my scanner was operating on the AC adapter, the interference was much stronger than on battery power. It dawned on me that I still had my Yaesu KSC-14 Rapid charger plugged in. I unplugged that device and the level of the interference dropped significanly, on the order of 2 S-units on 10 meters and even more further down the spectrum.

Now I must listen very closely to find it, but it is still there.

My next step is to determine if the interference is still originating within the house or not. At this point, it is no longer stong enough to create a problem. I just have to remember to unplug the Rapid Charger when I'm not using it.

It has become a quest to locate the source of the problem though, so more to follow....

I have some modern Electronics Fundamental Text books available. All are currently in use at various colleges. They are all Associate Degree (Technician) level. All books are NEW.

Basic Electronics by Grob - 8th edition - 1997 - $ 30

Electronic Principles by Malvino - 6th edition - 1999 - $ 30

Electric Circuit Fundamentals and Electronics Fundamentals - 3rd edition by Floyd - 1995 - $ 30

Electronic Devices and Circuits by Hassul and Zimmerman -
Conventional Flow version - includes student workbook
I think this is a 1998 copyright, but it is still in shrink-wrap, and I do not want to unwrap it to find out for sure. $ 30

Prices do not include shipping from Florida. By the way, most of these are big, heavy books, weighing about 6 pounds each.

E-mail to W8EK@usa.net

For other ham items for sale, see http://www.gnv.fdt.net/~kenmar

Thanks.

73,

Ken, W8EK

3394. Want to trade rebuilt Kenwood TS-520S

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: Marty Duplissey <mduplissey@lsbs.com>
Message-ID: <b5ma2.1261$04.1699@news15.ispnews.com>
Source record: 123869

Just finished rebuilding a Kenwood TS-520S.

All new tubes (3)
All new bulbs (4)
Cleaned all switches.
Rebuilt Voltage regulator section
Rebuilt Cathode metering section.
Completely re-aligned to as good or better than original specs..
Checked from stem to stern.
This is a nice rig. Case has a few scratches. Will re-paint it for right
trade.
Have gotten very good audio reports. Worked a JA on 20 the other night with
a vertical barefoot.
Comes with repro owners manual.

Want to trade for working or not radio with warc ie 530, 830 or equivalent
does not have to be Kenwood.
Marty
N5KBP

FWIW this is a rig I bought off this NG a couple of months ago that did not
transmit. A resister in the cathode circuit was open and a few other misc
problems I have corrected.

Message-ID: <3669F76F.97D4064@datacomm.com>
Source record: 123875

Included in a bunch of Ham stuff I bought is a piece of gear was
something I don't know it's function.

On the front are the markings "T*4*2" and the brand "EEI". It has Tuning
display, in - out filter switch, signal strength meter, cw - ritty mode
switch, tuning filter knob, mark hold knob, cw lock knob.

I assume it's a type of TNC?

I would appreciate and help / info, possibly even a copy of a manual.

Thanks in advance.

Louis

I am leaving the hobby.. Below is my list of items forsale and
I have more not listed that would be better coming to my qth
to see if you want to purchase.. Basically I'm cleaning house!
Tnx 4 reading my post Thom j.

Items sold are marked as: **SOLD** .
[A]
Forsale: AR-270B 146/446MHz 5.5/7.5dB 7.7' Never used but
assembled. Cost new $100 Price $65/bo w/pl259 connectors &
coax included. Dont want to ship since its already assembled and
tuned.. I'm in Burlington {Southern} NJ across from Phila, Pa.
[B]
All Forsale:
1st Item ; Astron 15amp power supply never used. New $80
asking $50/bo. Cant not ship.
2nd Item: Astron 35M power supply never used. New $169
+ tax.. Asking $130/bo. Can not ship.
3rd Item: MFJ-931 Artifical Ground. Never used New $80
asking $50/bo + shipping **SOLD**
[C]
4Sale "Glen Martin Roof Tower, Thrust Bearing & Heavy Duty!"
Aluminum Mast Price & Specs New from Glen Martin are below:
#1; New Glen Martin Roof Tower, Specs & Price...
Model: RT-424, Height: 4.5', Shelf to top: 34.75, Base width 24&#65533;,
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs Weight: 18lbs Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup! Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}
[D]
Forsale: Both New never used One MFJ 1272B & One 1272BX
microphone/tnc switch box. Includes all original info docs, manual,
& etc. New $39.95 each + shipping or sales tax. Asking $29/obo
each + shipping...
[E]

Forsale: **SOLD**
Kenwood SW-100B Power/SWR Meter. For 2mtr-70cm.
Measures 150w out from 1/4w-50w in fm - ssb. Great for
home or mobile with ac internal light. A real nice meter. It's
in mint shape. Included all original docs, manual, box & etc.
Works great... Price $60/obo + shipping.
[F]
Forsale; Star Micronics. NX-2420 Color Printer
With tractor printing. Includes complete users manual, printer
guide, tractor paper, printer cable, dust cover & extra printer
ribbon. It is scratch free & works great. It is as close to new
as it can be. Price $70/obo Must pick up! You can see how
well everything looks & works. Will include like new printer
cart/table for a few extra dollars.

3407. Re: TS570S connections to supermorse thru RCP2 software?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: Randy Nelson <nelsonr*nospam*@magma.ca>
Message-ID: <3669E5F3.1322@magma.ca>
Source record: 123899

From what I can see I have AF output from both the 13 pin connector or
the 7 pin remote connectors. Unfortunately if one wishes to use the RCP2
software the rs232 port is no longer avalable. While no longer a radio
application I wonder if then the most feasible would be a connection
from the AF source to the sound board mic input or to some connect thru
the modem? I do not have a TNC and am not looking to get involved with
packet at this time. I would be interested in other solns that could be
suggessted.

Randy

>either AC or DC, either will bring the same results....

Naw ... AC will result in hum (but, admittedly, only for the same number of
microseconds :-)

Hi, I have a Uniden SMH1525DT mobile. This is a VHF unit with a 150-174 split. The power output is 25 watts. This is programmable compact unit. It has led for channels, scan and mon. It includes a power cord, mic, mounting brackets but no screws. The price is $250 and $10 for shipping. Vist Uniden at http://www.prc.uniden.com/htm/products_con_SMH1525DT_main.htm Please e-mail me, thanks!

I was in the lucky 30%. But I eventually gave mine to a new ham, since
it was not in use (not to suggest the going IC-229 price is zero!).

> Inadequate heat sinking?, not sure here. As for
> price. The current model 2100H is $194 new and about $160 used and the 229

> of a new IC2100H.

You are right. Considering you can buy new single band radios for about
$200, the used price should be substantially lower.

3415. Telecommunications Books FS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <f5ca2.1056$QQ3.1398426@newshog.newsread.com>
Source record: 123907
Cross-posted to: rec.radio.swap,alt.books,rec.radio.amateur.equipment,alt.marketplace.books,alt.books.technical,biz.books.technical,misc.books.technical

I have the following books (all in excellent to new condition) available:

Telecommunications Topics by Carne
1999 copyright - Engineer level (includes calculus)
Signals, periodic functions, transient functions, LTI systems,
autocorrelation and spectral density, probability, random variables,
random process, queues, noise, information theory, digital voice
signals, data signals, error detection and correction, AM, FM, PM,
digital modulation, spread spectrum, transmission media, $ 25

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

Modern Electronic Communications by Miller
Technician level (Associate degree)
Communications techniques, modulation, TV, antennas, wave propagation,
waveguides, fiber optics, noise,
2nd edition - 1983 - $ 15
3rd edition - 1988 - $ 18
4th edition - 1993 - $25

Intro to Digital Data Communications by Stein
Data formats, UARTs, RS-232, codes, telephone systems, DTE/DCE interfaces,
error detection, protocols, multiplexing, packet switching, LANs
Technician level (Associate degree) $ 22

Digital Electronics by Uffenbeck - Technician Level text
Covers from number systems to shift registers to Programmable
devices to interfacing $ 25

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Electrical Measurements by Smith & Wiedenbeck
Classical measurements book - Engineer level $ 15

Principles of Electronic Communications by Mandl
Includes modulation, amplifiers, noise, transmission lines,
antennas, etc. $ 18

Although not radio, I also have some collectible scout books available:

Boy Scouts:
Exploring Handbook - 1958 - close to new condition $ 20

Handbook for Patrol Leaders - 1950 copyright - 1959 printing $ 18

Handbook for Scoutmasters - 1957 - 4th edition $ 18

Scout Field Book - 1948 copyright - 11th printing in 1956 $15

Girl Scout:
Girl Scout Handbook - "New edition" 1953 hardbound $ 18

Brownie Scout Handbook - 1951 copyright - 1955 printing - some wear - $ 15

Red Cross:
1986 American Red Cross "Expect the Unexpected" $ 2

If you would like more information about any book, please e-mail to W8EK@usa.net. All books are in good shape.

See http://www.gnv.fdt.net/~kenmar for other ham items for sale (not books).

Prices do not include shipping from Florida.

>previously owned radios in the class of the Icom R71a, Drake SW-2, R8, and
>R8A, this little DX-398 has remarkable performance! It's sale prices is:
>$199.95!
>
>Bill Crocker
>

I bought one yesterday. In addition to the low sale price, I got another 10%
off by sighning up for a Radio Shack credit card - 90 days same as cash on
purchases over $100.00. So the DX-398 cost me $180.00.

I am really impressed with it so far. I have not compared it side-by-side
with my R71A but then again I plan to use the differently anyway.

Thanks for the tip about the sale Bill.

Tony...

3417. Re: TS-870 vs FT-1000

Source record: 123909

I've always considered the inability of the TS-870 to accept crystal or mechanical filters to be a serious design mistake; DSP alone does not hack it for me. QST review articles are worth reading (TS-870 in Feb 1996, FT-1000 in Mar 1991).

When you contacted Maha about this problem - how were you treated?

That's a loaded question...as far as my experience goes. I had a minor problem with one of their products earlier this year, and they bent over backwards in getting me satisfied. And I have heard similar, pro-customer stories about them.

Sorry you had a problem with one of their dedicated units. I happen to use their MH-C777a Universal Conditioner/Chargers for my FT-50's batteries (and about all other battery packs I own), and cannot recommend it highly enough.

3421. Re: HTX-242 Mod is for REAL

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-05 00:00:00 UTC
From: George Andrews <mauser2@erols.com>
Message-ID: <74bkfd$5tr$1@winter.news.rcn.net>
Source record: 123913

Brian,
I reluctantly respond to your post as I am not certain of the intention of your query.
I do not own an HTX 242. And the implication of your statement is something I am aware of. It is likely that the HTX242 is of such vintage that the receive does provide wide band coverage without any modification. Therefore, unless one is a MARS/CAP operator, there is no real need to perform any modification.
I enjoy recycling older radios.Many of the older radios come ready for inband operation only. By in band operation I mean authorized amateur radio frequencies. Many of the older equipment cannot be modified to receive or transmit out of band. As an example, the HTX202. Others are capable of "pushbutton modification" and the example here is the HTX212. Others, such as older Alinco products, require a little more effort to modify. In most of the radios I am aware of the receive modification is not one that is separate from a transmit modification. Therefore, when one modifies his Alinco DR112 to receive the NOAA weather frequencies, it is also modified to transmit out of band. It is not possible to separate the functions. If it is possible to perform a receive only mod, and I do not need MARS/CAP capability, then that would be the extent of the mod. One may also have a MARS/CAP license authorizing transmission on MARS/CAP frequencies and therefore need access to that part of the spectrum. And to answer your question the NOAA frequencies are 16X.XXX MHz.
It appears that many who are participants in this NG assume that anyone who modifies a transceiver is up to something illegal or improper. This is not always true! I am outdoors a lot on foot, bicycle or motor vehicle and like to have access to NOAA weather capability in my ham gear. Because I prefer to recycle older radios, this means modification. There are others who may want to listen to some other part of the spectrum with good reason. Not everyone who modifies a radio is a sick person as has been implied.Of course there will always be a few who modify radios for illegal purposes, and in fact commit criminal acts. I would ask readers to take an "abstract look " at the dialog in this NG. Look at it from the point of view of a federal regulator and consider the thought process that may take place. Maybe some on this NG would be happy with even more Federal regulation of our hobby and communications equipment in general. Maybe the basis of our judicial system should be changed to guilty until proven innocent. Enough said.
Happy Holidays and 73 to all!

Pull the main circuit breaker that feed your house with AC.
Set your radio up to work on a battery.
This will help you determine if problem is in your house or outside.

>hack it for me.

There is a way to make tremendous improvement to TS870 selectivity, I have replaced (wired in) both IF filters (8MHz and 455 kHz IF) with International Radio 2.1 kHz filters. Makes completely different radio both on SSB and CW, no more overload problems. Using narrower CW filters takes a bit of tweaking selectivity controls, the selectivity selection scheme does not allow for displayed settings to correspond to actual selectivity bandwidths. For now I am very happy with just SSB filters, tremendous improvement in DSP functions too. Now I love my 870!
DSP alone for selectivity does not hack it! When signals get through the brute force IF filtering, IF stages and DSP get choked. I tried to get this through to Kenwood engineers, but "what do I know!" Yea, they could have left some room on the boards for optional filters.

Be careful with these, they were very prone to overload on anything
but Yaesu transcievers. You need a modification done in order to fix
this problem. The symptom is that the "overdrive" circuit pops in as
soon as you start speaking in SSB mode.

That is an un-true statement! Remember, there is the cost of the radio, the cost of the UT-106 DSP module, and the cost of the additional software, above and beyond what comes with it the radio. Maybe you need to think before you speak... no wonder you're embarrassed to leave your name.

Hi Group,
I have recently acquired an alliance rotor (no model# on rotor) and need to know if:

1. Anyone has a rotor controller for sale.

2. Anyone know where I can get the rotor rebuilt as I was told it is "frozen"?

3. Anyone out there have a rotor/controller for sale. I have a Mosley tribander (but no manual for the antenna) so I don't have wind load of weight info yet).

4. Also looking for a manual for a Mosley Tribander Professional.

Any help would be appreciated. Please E MAIL!!!!!!

Tnx,

> Happy Holidays and 73 to all!

George, very well said and thank you for the holiday wishes. Too often we
hand out information that can be illegally used. Currently, there is an

investigation of someone who had been harassing a police repeater. The police are trying to answer how this individual came by an amateur transceiver that was modified to operate out of band. Hopefully, the trail doesn't lead back to the amateur radio service. I would prefer not to aid these kind of people, and since I don't know who is on the other side of the web, I always suggest that folks contact the manufacturer. I am expecially suspicious of no-callsign posters. They can simply go buy a NOAA radio or scanner. We have enuf restrictions on our radios without the FCC laying more regulations on our stuff. Soon I can seen them requiring seals on the radio cases, and potted/soldered cans over the IF. In other words, we hurt us.

I have had something like this. It was worse around 7 MHz.

It was from a neibourg's touch lamp. I could even toggle it's lamp on and
off by transmitting a carrier on 7 MHz.

ARRL has info on this on their server.

Yep, had both over the last 5-6 years. Both very nice radios..... but for me, the 990 is clearly a better radio. Hard to describe, but it just seems overall "smoother" for lack of a better term. Also the KW noise blanker is useless on typical in-home AC trash, vs the very effective one in the 990.

>FROM FALKEN1:
It's not illegal to modify, engineer, or publish modifications on
radios.............
ACTUALLY, the FCC has already stated publicly in regard to
"modifying" scanners that anyone doing modifications shall be conidered
"manufacturing" radios without fcc type acceptance, punishable by law. This
caused most all large scanner mail order companies including Grove enterprises
to stop offering "cellular mod service" on scanners.

It's worth the money to just buy the kit...the DB9 RS-232 plug contains
surface mount level changing circuitry and wouldn't be particularly easy
to duplicate.

I'd also say the data stream is inherently copyrighted as it is canned
in the radio's firmware and -that- is copyrighted. Don't know about
using it just for yourself, however.

QST did reviews of both rigs in the early 90s. The 850 came out ahead in terms of what I was looking for, so I bought one and it is a terrific radio. The receiver is one of the most sensitive and selective ever made (and may even be better than my new FT 1000MP !). I'm keeping my 850. John, K7JY, Seattle.

My guess is that even with a shielded loop, on 1.8MHz atmospheric noise is at least 10dB above any thermal noise in your amplifier. My experience is that I had to get above 21MHz to ever see amp noise above atmospherics. But... it's been a few years since I made those measurements.

Good luck, Rob

If you can't figure it out, get yourself a JPS ANC-4. It'll do a job on the noise. I have one and it amazes me how well it gets rid of local noise. It connects between the antenna and the radio and with its own - seperate antenna - picks up mostly the noise and lets you cancel it out using some phase adjustment on the ANC-4.

I don't know if any ham rigs care about the day/date, but the following would work with things like VCRs.

To avoid Y2K problems with your equipment that doesn't save files, in 1999 set the
date to the year 1955. This should make the [day_of_the_week]-[month/day_date] relationship come out
correct into the year 2000 and beyond, including leap years.
The year 2000 is a leap year.

The current crop of radios already "listen" out of band. Modifying a radio to -transmit- out of band, then not transmitting out of band is the irrational thought process. Public service freqs require type accepted radios. This means fire, aux police, emergency managers, blue dot, red dot, yellow dot, etc. Modding a radio shack HTX-242 isn't going to cut it. Only the military allows non-type accepted radios on their MARS/CAP frequencies, and there aren't that many MARS/CAP operators out there. So why -do- you modify your radios? Just to see if you can bring up the police repeater? Maybe to mess with the cutie pie working the McDonalds drive thru intercom? Help us understand this sickness.

Thanks.

Some of us use them for volunteer fire service work. While it may not be exactly legal, it makes sense for those of us that are hams already. When a department just doesn't have the money to buy enough handheld radios, each member must look for his own or do without. I'll risk the minute chance of FCC action against me.

The other option is we can buy some OVERPRICED motorola radios and let your house burn because the trucks aren't maintained.

I agree with your intent, though. I don't offer to help anyone in any way with radio mods if they don't have a legitimate purpose.

From: dwhite@Hawaii.Edu
Message-ID: <74er9n$f94@news.Hawaii.Edu>
Source record: 123698

Help!

I have the dual-band (2m/70cm) HT that is the USA/Canada model. The frequency range is wide enough for me to use it for hearing satellite downlink.

The so-called "General Market" version of the same rig would allow the downlink, but omit alot of the rest of the band.

To clarify:
US/Canada 144-148 438-450
General Market 144-148 430-440

Has anyone heard of a mod that will give me both versions of the rig at the same time?

I'd rather not sell this rig, but I need it to play both roles.

Tnx es 73,
Doug White N9GFL

3486. Best HF + 6 Meters Under $1500?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-06 00:00:00 UTC
From: witmerjr@aol.com
Message-ID: <19981206161231.02932.00002437@ng140.aol.com>
Source record: 123701

Looking to acquire "Contest Grade" 6 Meter capability in a transceiver which also must have HF capability. I live in an area where there are many local, very strong, 6 Meter signals. So far the FT-920 looks like the best in terms of signal handling capability specs - out doing anything else in the price range.
The built in tuner that is operable during receive also looks like it would be helpful.

Not interested in an HF transceiver - transverter - amplifier approach because of space requirements.

Thoughts - Comments?

Thanks & 73

Bob, W3RW

Hello all,
Would like to buy one or two working Kenwood IF-10C interface boards with cables. The IF-10C has been discontinued. Kenwood currently sales the IF-10D model which is not compatiable with the IF-10C model. The IF-10C was sold as an internal option for the TS-140S and the TS-680S HF rigs for computer control of the radio. Please email me at: kb5rfn@juno.com if you have one to sale. Would like to purchase two working units.
73's, Mike H.

3490. FS:80's audio components cheap!

I have the following items for sale:

Maker/Description Model/Price
sony audio/video STR-AV300/$27
receiver
right speaker output
not functioning properly
remote included

pioneer 6-disc PD-M500/$43
changer
6-disc and single disc magazine included

panasonic vcr PV-1366/$23
remote included

pioneer 6-disc PD-M401/$37
changer
6-disc magazine included

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals. All are in that Eighties electronic black and have a digital display, anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

3491. Re: Need info for Motorola Radius P100

Newsgroup: rec.radio.amateur.equipment

Source record: 123706

The interface and data is quite simple. However, you need a Motorola Interface Box and a Motorola Cable. Both, of course, are ridiculously expensive from Motorola (over $200). You'd probably be better off to pay a shop. I've found shops that will do it for $25.

For a service manual, your best price is directly from Motorola. Try this number:
Motorola's parts order line: 1-800-422-4210.

I priced a P50 manual at my local Motorola shop: $40 and they'd have to order it from Motorola. I called the number above and got it directly from Motorola for $25!

Hello. I may be interested in getting a used Yaesu FT-100 HF/6m/2m/440 all-mode rig sometime in the near future. But I am a little concerned about the price of one (although I know it would be much cheaper then getting an all-mode HF rig, 6m rig, 2m rig, and 440 rig). I�m interested in knowing about what the going price is for one new, and for a used one in good condition. Any help is appreciated. Thanks a lot for reading!

Source record: 123710

Hmmm. Sounds ominous but no specifics. Sitting on the North side of the line, I can't say that I've had any problems... and I do it all the time.

Equipment shipments to Canada must go through Canada Customs. As long as there is a proper declaration form on the package, there should be no problem. Equipment declared as "Amateur Radio Equipment", like many other categories under NAFTA, are duty-free. However, the receiving party will have to pay Federal Goods and Services Tax (7%) on the declared value of the equipment and they are also obliged to send Provincial Sales Tax (8% in Ontario) to some provincial government address that no one knows.

Equipment shipments from Canada to US appear to be as easy although I don't know what taxes may be payable to US Customs.

Source record: 123712

Take my word for it... once you've had an FT1000D, you're spoiled for anything else. No other amateur transceiver, in or out of production, gives you the combination of "kick-ass" transmitter, "bullet-proof" receiver or "intuitive" ergo that the 1000D does. And since you can only use one transceiver at a time, it is the whole package that counts.

There's a lot of high-tech do-dads on the newer rigs these days, like graphic displays, computer menus and DSPs, but these things are meant to either compensate for inferior circuit design (ie. reduced cost) or to give the marketing guys something new to sell you.

The FT1000D is an operator's radio, not a "fiddler's" radio. If you want to fiddle around in the shack, an 870 or a 756 will be lots of fun. If you want to operate... hour after hour... the FT1000D is the way to go.

In my humble opinion! :-)

I have a brand new, old stock Turner model 450C mobile high impedance
microphone for sale. Extremely hard to find item for your older rigs, and
this one's never even had a plug soldered to the cord!
I posted a picture of it and accompanying box / lit at:
http://www.megsinet.com/steam/mic.jpg
I bought it from a dealer who told me he had an old stock mobile
Turner mic. Well, I thought it was high impedance.
Anyway, I'll ship it for the first thirty bucks. Or you can pick it up in
west suburban Chicago.
Thanks... Mike 708-795-7739

3500. FS: Guy bracket with torque bars for Rohn 25 tower

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-06 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <74fcl0$g1s$1@ash.prod.itd.earthlink.net>
Source record: 123715

If you're using Rohn 25 with any beam larger than a small tribander, you know how the tower twists slightly when the rotor stops turning. With a long boom and/or several elements, the twisting can become quite pronounced at heights of 60-70 feet or so. This guy bracket/torque bar assembly, using the GB-25 guy bracket and TB-25 torque bars, is designed to minimize this twisting action by effectively moving the guy points out to the end of the torque arms.

Here's a photo of the entire assembly mounted on my TV tower (for illustration only!) so you can see how it mounts. The guy wire terminations would connect to the holes at the end of the torque bars.
http://home.sprintmail.com/~sentek/guybrak1.jpg

This photo http://home.sprintmail.com/~sentek/guybrak2.jpg is a close-up so you can see how substantial this assembly is and how it fits the Rohn 25 tower perfectly. Note how the right side of the guy bracket member on this side of the tower is bent to fit around the diagonal tower rod. This allows the bracket to sit on the horizontal rod all the way around the tower. The bracket members, torque bars, 6 bolts, 6 nuts are all hot-dip galvanized to resist rust over the long haul.

I bought this assembly new and it was in the air just two years and is in excellent condition. I'm asking $45 and you pay the shipping charges (I'll handle the packaging). I haven't weighed the assembly, but figure maybe 8-10 lbs. from zip 27501. Questions welcome.

3501. voice keyer

Newsgroup: rec.radio.amateur.equipment

Just in time for the next meteor shower!!!!!

If you are not happy with the current offering of software voice keyers, how about one that was designed from the ground up with MS operators, contesters, and ragchewing in mind! If your PC has a Windows compatible sound card, its time you try this digital voice keyer. (Heck, one of the users even figured out how to do MS CW skeds with it.)

Check out http://home.earthlink.net/~n7qjp for the details. You'll be glad you did!

Update version released today, version 1.2.15.

Next release will integrate completely with FT-Manager CAT control software, and should be available later this week.

3502. Difference between FT-11/41 - Ft-51R?

From: Louis Bybee <louisb@datacomm.com>
Message-ID: <366B69FD.ACAECACC@datacomm.com>
Source record: 123718

I am trying to figure out the function of the four pins in the cup adapters on the Yaesu NC-50 Quick Charger. With the front of the unit facing you, the far right pin has negative potential. The other three have a positive potential (equal) with respect to the far right terminal. The three terminals to the left have very little potential difference between each other.

I would assume that one of the three terminals is for sensing, with the remaining two being used depending on the capacity and voltage of the battery.

Anyone have a copy of the schematic they would be willing to share, or know the function of the terminals?

Thank you.

Louis

I just picked up the programming kit today. It performs as advertised. However, since I am a software developer, I immediately wanted something more <g>. Also, I was a little suprised to see that the cable connects to only one radio port (mic or speaker) at a time. The drawing in the manual shows the cable connecting to both.

3515. FS: compact mobile ant tuner (matches IC706/DX70/TS50)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-06 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <36695F5A.97620737@yahoo.com>
Source record: 123804
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi,
I have a JSC brand mobile antenna tuner. 300W max power capability.
Tunes coax or random wire antennas. With built in balun, vswr meter,
power meter. Same width as Icom 706/ Alinco DX70 / Kenwood TS50.
A notch above MFJ in quality -- very nice, all metal case with nice
knobs and good sized inductor and capacitors. Tunes 80 thru 6 meters
(yes, works on 6 meters)!

Used it mobile for a couple weeks and worked very well w/ my IC706 and
ham sticks. Really took the "edge" off of the VSWR. Color is black
with
white lettering. VSWR meter can be back-lit for readability at night.
Now using a screwdriver antenna, so this tuner is surplus.

Price: $55 + shipping

Hi,
I have a vibroplex racer (or Lionel) CW telegraph bug. Condition is
fair -
a daily user, and the name tag fell off long ago. That's why I dont
know if it is a vibroplex or lionel. Works fine. Missing name tag and
dit arm weight (have a home brew replacement). From the 1930's or early
1940's.

Hi,
I have a "Ham Radio Center" CW keyer for sale. It's model HK-5.
Condition is good/very good. Keys both grid block and direct
rigs. Looks a lot like MFJ, but sold under the HRC name.
(from St. Louis MO)

Keyer is based on Curtis 8043 keyer IC. Runs on 9V battery or wall
wart. I supply the battery. Internally control pitch/weight/volume
external pot controls speed.

Hi and Thanks for reading this. I was recently given an ARC34B in fairly poor condition, it has been cannibalised but all the tubes are present, there are some interesting pencil triodes and lots of subminiature tubes which I would like to get some data on, or at least some pointers as to where I could find it. The tubes are:
type 5636
5840
5906
5710
5896
Any info on these tubes would be most gratefully received!!!
Many thanks
73 de Ted ZL1MT

Russ,

I have the Alinco 610; except in the TQ model. Only difference is it has the ctcss encode AND decode installed. The price on this rig from TechAmerica is good..you can add the decoder for $60. This is a very nice mobile. You would be hard pressed to find a comparable radio anywhere, regardless of price.It has all the bells and whistles, and is highly rated. It is easily modified. The ONLY thing I do not like about it is, when transmitting, the cooling fan comes on (barely audible) and stays on. It will not shut off unless you power down/up the radio. It is not thermostatically controlled or on a timer, which I find puzzling at the least. Other than this one glitch, I have no problem recommending it. By the way, Alinco products are fine. I have 3 handhelds along with this mobile, and they all perform admirably.

Source record: 123817

For Sale: DSP-9+, Unit is in super good condition. It has only been used during some contests. I no longer have a need for it, dut to my new rig having filters already in it. If you are looking for a versatile DSP SSB and CW filter with speaker and headphone output jacks this is the one.

I will ship the unit in the 48 for a $85 US Postal Money Order.

The manual will go with the unit. Sorry no 12v power supply comes with unit (I powered this one from the accessory jack of the main12v supply for the rig).

> I have had "dealings" with buying something from 'northof the
> border', and will never do it again...even if it was free... a word to
> the wise.....C.Lorentson 73

I have experienced both good and bad in dealings with Canadian Hams, but
then the
same is true of fellow Americans. Neither country seems to have the corner
on the
market for honorable and dishonorable Ham horsetraders!
I am told by Canadian Hams that if packages are accurately marked "Parts &
Accessories for Amateur Radio Hobby" that they are not taxed at the border.
(obviously, marking a rig as parts and accessories would be dishonest and
set
one up for smuggling charges)
It generally tends to be less expensive and less of a hassle to use the
mails for
packages than UPS.
Just my experiences and observations ... your mileage may vary ... etc.

John;
All companies are still maintaining some security around this modification.
It's
for a good reason, some of these amps are still finding their way on to the 11m
Band. I appreciate your desire to complete this change as quickly as possible,
but most hams are not willing to bridge this securuty. We all went through the
process to get the job done. 73 and good luck.

From: Bill Smith <bs@BSartist.com>
Message-ID: <74ef31$714@bgtnsc02.worldnet.att.net>
Source record: 123832

I have the exact same problem with the 5-10 minute fast charge duration. I'm on my second one.

When I called them on the first one and told them that it started blinking after 10 minutes, they told me that shouldn't be and were very good about cross shipping me a new one.

But the new one seems to do the same. I then just simply didn't know if maybe this is how it's supposed to work. I would have thought that if there was a known problem, they wouldn't have sent me out another one with the same problem. I usually follow the 10 minute fast charge with several hours of trickle charge.

Also, I have two batteries, the big one from yaesu and the thin NiMH from MAHA. sometimes when I put the yaesu one in, I have to smack the charger to get it to light up.

At this point, I just can't be bothered sending it back to them again because I have no reason to believe the third will be any better.
So I will just stick with my bad impression of poor quality control or something. Even their service was courteous and prompt, it can't make up for poor workmanship and the hassle it causes me to have to keep going back to them.

On Sunday Sept 27th, I agreed to make a swap with Greg Golda......a microphone for a n old 2 meter rig....to be shipped at the same time the following Tuesday.....after waiting quite a while I started trying to contact him and was ignored for about a month and a half...when the heat really got put on a couple of weeks back....he responded with the excuse that a family emergency, sick father in law or something to that effect...had precipitated the the delay...he was "out of town for a couple of weeks, that doesnt explain a two month delay to me...but I feel bound to say...He did finally ship the radio....after of course his local ham club and others contacted him directly for me...sort of got in his face..if you will....So, he sent the radio we are :"as even as it will get"...I would not do business with him again, but, I admit to the slight possibility that some things got in the way...not 70 days worth...We are even Greg....well., we are difinitely out of each others life....73 to the group and hope you have a joyous holiday season....Last week at 87 years old my father broke his hip.....I lost a few days, and will lose more....but business goes on....he taught me that!!! Have another interesting story about a lawyer in florida who cant operate a 751a but can certainly threaten well....I susupect he took to much viagra and got his head in the clouds!! hi hi. bye Murray

Huh? The GC-1000 came out in mid-80's, earlier than the one he's
looking for. So how is it that yours has been running for 20 years?

I need a good quality power supply for my shack. I would like at
least 20A continuous.

Any recommendations would be appreciated.

I notice that Astron is one of the most widely available. Is their SS
series preferable to their RS series?

Thanks,

Robert Glen Martin

I am interested in any information or comments about the Dentron HF-200 transceiver that was produced in the late 70's. I know there are a few of them still in existence but they were plauged with some problems. If you can enlighten me about this rig, or if you have one for sale or know someone who does I would like to talk with you. Thanks...Bill

The Canadian Customs, as well as the U.S. Customs people are normally very cooperative. And NO, there is NO duty on this in either direction. You MUST however mark ALL items as "Ham radio" equipment on the outside of the package & on all relevant paperwork. And as long as they are actually part of a Ham Radio set-up, you should be okay. This would include, transceivers, receivers, power supplies, SWR meters, antenna's, etc. It is always a good idea to include copies of all correspondence in which prices and values were discussed. Plus a copy of a bil of sale. Otherwise, the Customs people will determine the value for you. And you don't want that..... Rene VE6WCA (dutch)

>? Thanks in advance.
> 73's de SV2BWM
>

The finals in this rig will turn up to 180-200 watts without modification, but it will shorten their lifespan considerably since you will be running them at their maximum. Since the difference in transmitted signal is only .5 "S" units, it's hardly worth the effort. Spend your money on an AL811 or similar small amp rather than on replacing your finals every year...

73 and Happy Holidays,

Dan - KF6KNB

Correction noted. I was testing this with my VCR, which turned out to be
Y2K compliant. Until 2080 or so. Checked "cal 2000" and "cal 1944" and
"cal 1972" in my unix shell account and they do match. And they are all
leap years. And checked "cal 1953" and it shows correctly that I was
born on a Saturday.

For Sale:

MFJ 752c Signal Enhancer Dual Tunable SSB/CW Audio Filter.

Primary Filter:
Two section four pole variable filter which has PEAK, NOTCH, LOW PASS, and HIGH PASS functions.

Auxiliary Filter:
Single section two pole PEAK and NOTCH filter.

Front Panel Controls:
Power Switch which selects power OFF, power ON, SSB noise limiter, and CW noise limiter.

Function Selector selects PEAK, NOTCH, LOW PASS, or HIGH PASS in the primary filter section.

Selectivity controls (2) adjusts the bandwidth of the primary and auxiliary filter from 40Hz to almost flat.

Frequency controls adjust the center frequency of the peak, notch and the cutoff frequencies of the LOW PASS and HIGH PASS filters approximately 300Hz to 3000Hz.

It has a 2watt audio amplifier. It will operate on 9 to 18Vdc. It has two switch selectable inputs for two receivers. Headphone and speaker outputs.

Excellent condition. With original owners manual and carton. $50.00 + shipping.

Email: rwalter7@aol.com
Thanks.

---------- While I am far from an expert on this stuff I can suggest that in addition to what has already been written to you you can anticipate potential sources to include transformers or motors in a neighbor's house. There ws an article in QST about 11/2 years ago that described various episodes of trouble shooting this kind of stuff. The article is less than two years old for sure.

I am selling my trusty 2M handy-talky:

Yaesu FT-203R, synthesized, works fine, no problems.
I rate it 9 of 10 cosmetically. It comes with a Vox headset
for hands-free QSO's as well as a car cigarette
lighter mobile power adapter.

I am asking $135. which includes free shipping
from Tampa, FL to anywhere USA.

This would make a great stocking stuffer
for a young operator!

Just finished rebuilding a Kenwood TS-520S.

All new tubes (3)
All new bulbs (4)
Cleaned all switches.
Rebuilt Voltage regulator section
Rebuilt Cathode metering section.
Completely re-aligned to as good or better than original specs.. Except for
15 mhz wwv recieve.
Checked from stem to stern. This is a nice rig. Case has a few scratches.
Will re-paint it for right
trade.Have gotten very good audio reports. Worked a JA on 20 the other night
with
a vertical barefoot. Comes with repro owners manual.

Want to trade for working or non-working radio with warc ie 530, 830 or
equivalent
does not have to be Kenwood.
Marty
N5KBP

FWIW this is a rig I bought off this NG a couple of months ago that did not
transmit. A resister in the cathode circuit was open and a few other misc
problems I have corrected.

Thanks to everyone who answered my query, either here in the group or by e-mail. The consensus is that it is a good unit and worth the price from Tech America. If I can pony up the bucks with the holidays coming, I'll probably get one. I even got an e-mail from a poor guy who had TWO of them stolen. After the first, he went right out and got another. Then lost that one too! I'll try to stay out of his neck of the woods.

The problem with the dedicated ft-50 charger was that the case would
melt around the pins. The pins would then have trouble making contact
with the battery. I went through 4 chargers during the warrenty period,
& actually melted the Maha battery with the last charger. I live near
the distributer & during my last trip to warrenty the charger AND the
battery they showed me the latest case and pin design. Frankly I think
they have it fixed but I politely accepted the new battery and the
UNIVERSAL charger. The universal charger will charge most of your toy's
batteries & a little gentle pressure on the factory might get you one as
a warrenty or perhaps good will gesture on their part. 73 AC6OB

3606. Re: Computer programming ADI AT-600

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-07 00:00:00 UTC
From: HP Authorized Customer <joe@user.com>
Message-ID: <74gmoo$e4i$1@fnord.systemsoft.com>
Source record: 123678

You know, if I knew in advance that a manufacturer had
pulled a BS stunt like putting a 'copyrighted' message
in a programming data stream to prevent someone
(ie a third party) from developing peripherals, I'd
absolutely refuse to buy the radio. If I found out after they
had my money, I'd scream bloody murder at them.

That's BS!

As to being 'copyrightable' and restricted, I don't know that
it's legally defensable. I mean. IBM put "Copyright IBM"
in their BIOS extension ROMs. And it's not common
practice that 3rd parties put somthing like the phase "Some
programs expect Copyright IBM here" or similar in their
ROMs so that the "Copyright IBM" sits in exactly the same
place.

Personally, become a well informed consumer, and KNOW
what your buying. If you run into BS like this, and you don't
like it, BITCH! Sometimes companies DO listen. Years
ago I called Burger King objecting to the ads with the 'sometimes
you gotta break the rules'. I also got friends to call after posting
on CIS. The ads got pulled, and BK issued a 'statement'.

You CAN make a difference!

I know first hand of two separate cases
of people turning up the power on 850 to more than say 150 watts
Both rigs blew transistors in the AGC circuit which was not designed to
handle that
You're looking at a costly repair !!!!
Just because the finals can theoretically do it
doesn't mean the rest of the rig will
I won't even mention spectral purity after that kind of mod...

Message-ID: <19981206202927.08955.00001161@ng-fa2.aol.com>
Source record: 123728

I have a very nice RME 4350 receiver. The front panel is perfect and the cabinet is in good shape. If I were going to keep it, I would paint the cabinet. I also have the crystal calibrator to make it into an RME 4350A. The instructions of how to put the calibrator in is in the instruction manual. The receiver works very well.

I also have an RME 152A converter that covers 10 / 6 / 2 meters. I don't a clue if the converter works. I have never turned it on.

$225 plus shipping costs. I would consider a trade... what have you?

Good advice. We (Timewave Technology) ship to Canada on a regular basis. I would also add the statement "For personal use". That uncomplicates the commerical regulations. Be sure to include a phone number for the person you are shipping to on the shipping label in the event there are problems.

The only problem we have when shipping new products is that UPS slaps a $40 clearence fee per box on a regular basis. USPS packages avoid that (but not the Federal Goods and Services tax).

Is it true that canadian keyers are all programmed to send "eh" after a period? :>)

If this is of topic a bit, I apologize...but i nd some help locating one of these......

I retired due to bad heart and lungs three years back and am looking for one of these radio head units w/microphone.
Anoyone recall these units. I am looking for a Mint or near mint condition head, tan in color with brushed aluminum front panel, with microphone. Front panel has the red light, gren light volume and squelch switch and the P/L switch with mounting bracket if possible. I do not ned the radio nor do I care if it is a VHF or UHF head unit. It will be for display only (hence the need for the mint to near mint condition.
I'm putting together my memorabilia collection and the radio head will make a nice adition to my stuff collected over the years. If you have one laying around gather ing dust and will let it go for a reasonable price, let me know. (If you are a patch collector let me know that too and we could exchange.)

Also, any guys in or originanally from New York state local departments who were members of the PCNY, I collect items with the PCNY logo on them.

Thanks for reading,
Ray Miller,.

I have a Kenwood TR-7850 2 meter mobile rig. It has the CTCSS tone board added in. It is a GREAT rig! I love it, but the transmit is out, or well, it comes and goes. Any ideas...opinions etc...? Will Kenwood still service these rigs? Or should I give up, or maybe try someone here local? I have not asked around yet but I will here local to me. Any ideas or suggestions are welcome. thanks...

It MAY be the microphone... I was told that a new one for it from Kenwood would be about $60! That is almost what I got the radio for!!!

I wish you'd give them a call and see what's up...

Are you in the habit of discharging your packs way down before placing them in the charger? I remember another charger that sometimes was "fooled" by low overall voltage when initially placing a pack on it...but if I started charging it - then took the battery off after five minutes and re-started it - all was perfect.

- Clint Bradford

No duty on anything made in Canada, the U.S. or Mexico. And 5% on the rest,
with the exception of China and Cuba, there is a 35% penalty..... And that
is IF they allow you to bring it in at all. Rene VE6WCA (dutch)

Compared to the post office, UPS is a rip-off. YES, they have no problem with charging you almost $40 to clear a package through Customs, even if the value is only $30. The post office on the other hand, doesn't normally charge at all when the value is under $20 (approx.) and they only charge a fee of $5 to clear ANY value through Customs, when it exceeds the $20. And my wife is VERY good in arguing with the Canadian Customs people at the post office. She just received another refund check..... We have NEVER managed to get a penny back from UPS. They take - take - take ! We have all our parcels normally shipped to the border and once a month we go across to get them. Then we clear them ourselves (50 to 60 parcels at the time !) through Canadian Customs with NO fee at all. The money we save, pays for the trip. Rene VE6WCA (dutch)

Hi folks :) Need some $ for the holidays? Read on....

I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Roland Space Echo RE series
-Compu-Rhythm
-Gleeman Pentaphonic
-Roland Jupiter-8
-Roland System 100m
-ARP Avatar

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

H Fellow Amateurs; I just came across an UHF repeater. I would like to know if anyone can tell me where I might be able to find a service manual for a Regency Micro Com U15RA repeater. I have a Hamtronics VHF repeater; but would like to also make use of the UHF repeater for the surrounding area; especially during storm spotting season. Also where would I get the crystals for this UHF repeater?

Thanks to all who respond.

Ray, I have a couple of the control heads you describe. I think these were on Mocom 70's. While I can't attest to them being pristine in condition, I will dig them out of the junque box and see what shape they are in. These are metal, and have the lites you describe, the spkr plugged into them as well as a two 12VDC sources. Can't remember why two 12V leads. Let me know by email if you are interested. Do you need the control cable as well? 73 de VE6INM (Glenn)

3646. Alinco DX-77T Computer Interface Info?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-07 00:00:00 UTC
From: Ben Coleman <bcoleman@mindspring.com>
Message-ID: <opbyrznazvaqfcevatpbz.f3ll500.pminews@news.mindspring.com>
Source record: 123761

Has anyone seen any information on the Alinco DX-77T computer interface? Alinco appears to sell the interface cable(ERW-4), but so far I can find neither software nor information on the protocols the interface uses. The cable would seem to be useless if you can't do anything with it. Has anyone seen anything more on this?

I have a 5 1/2 month old TS-570D(G) that I am selling. I just 4 weeks ago
sent the rig into Kenwood Service Center East at Virginia Beach, VA for the (G)
upgrade. The rig still has 6 1/2 months of warranty left. I am primarily a CW
operator and the rig has a IRAD 400Hz filter installed. The rig is a joy to use
on CW and SSB with some of the new (G) upgraded functions. Please let me know
if interested. AES sells the TS-570D(G) for $1198 and the IRAD filter is $100.
Price is $1025 firm

I also have a TS-870S SN:90200062 this is a very latest run of the
TS-870S. This rig is only 10 months old. I have all the original boxes,
manuals, hand mic, and software. I am needing to sell one of these rigs
to generate some funds for home improvements and I am not in need of two
rigs. Whichever one sells first I will be keeping the other. The price
of the TS-870S is $1800.

They had a separate 12 volt for the recieve and the transmit. This way, you could receive even if the key was not in the ignition, but you needed the key to transmit. I believe, that this was done for two reasons, the older Motrans and Motracs had solid state receiver and tube transmitters, so they pretty well needed the enigine to run. The other reason was security, no strangers could transmit without the key to the ignition. Rene VE6WCA

I bought one, turned it on, and tried to listen to CW. (I don't like
sideband so much), in the ham bands.
I was very disappointed. Even with the USB/LSB, CW didn't come thru
like it should. Too "muffled". Even though catalog touts rig as "CW".
May be nice radio otherwise, but for $200 didn't fit my needs.
I'll keep looking...
Vic

I've been using the rig for almost 19 months. I am a casual CW operator on 40 and 30 CW. For that purpose, I probably have more rig than I need.

But, I enjoy the radio. While it is a complex, hard to learn piece of gear(compared to my other rigs in the past --FT 757GX, FT 900, IC 735, HW 16, OMNI VI). With that said, I would still purchase the rig because I enjoy the receiver(I listen to SW broadcasts too), has good keying characteristics (great filtering), and once you learn to operate the rig, their are plenty of great features to do anything you want.

Hi everyone,

I'm looking for a reasonably priced compact oscilloscope such as the
military surplus OS-8.

I believe Waterman made a civilian version but the military unit had
solid state horozontal and vertical amplifiers. In today's world, they
are not worth too much since the bandwidth of the amplifier was only
abour 2 MHz. For my purposes, this is just fine.

E-mail me at w1ki@arrl.org

Thanks and 73,

Wayne, W1KI

Well, I have a Windows 95 emulator for the ol' Mac, so I guess I'll have
to pick me up a kit and run it that way, if it works well like you say.
Beats punching in all the freqs and alphanumerics with the keypad.

Ah Ha. You jogged my memory now Dutch, and you are absolutely correct. The
'green' lead was the ignition source and the 'orange' lead powered the rx.
When the ignition was turned on the "big power" was relay switched by the
'green' lead and applied the 30Amps to the radio.....or did the 'orange' lead
go to the ignition...........??? 73 Dutch and thanx for another trip down
(not-so-good) memory lane.

This is probably the third reference I've seen to somebody modifying their
TS-870 with tighter filters. Has this mod been written up? If not then
when is somebody going to do it? Seems like a good magazine article.
If we can't build them from scratch anymore then at least we can do
projects like this. Don't wait for me, the radio will be obsolete by
then!

3671. Wanted: Photocopy of HQ-110 schematic

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-07 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <366C24A0.1924@amsat.org>
Source record: 123786

This past weekend I purchased a Hallicrafters HQ-110 at a local hamfest. For the most part, the radio works except for the RF sensitivity control. It does nothing when the control is rotated.

After investigating the problem, it appears someone was hacking and modifying the RF sensitivity circuit. The wires on the control pot are all soldered very poorly (cold looking) and there are two add on caps hanging off the control pot which look out of place. I think this circuit would be fairly easy to repair, however I need to acquire a schematic.

I'm willing to pay a reasonable price to obtain a clear readable photocopy of the schematic and any other alignment information.

Thanks, Tom NE7X...

From: falken1@my-dejanews.com
Message-ID: <74hbnu$49b$1@nnrp1.dejanews.com>
Source record: 123788

The simple fact is, it can be modified, and thusly I SHARED the information. I didn't market it or make any profit from the post. The reason, why modifications are there in my (sick) mind, is because in the event of and emergency, you might NEED the modifications to get help for yourself. Say for instance, you where stuck on a mountain with no amateur repeater and you NEEDED medical attention. I would certainly rather have the modification on my radio that would save my life than be out there with a radio that I can't use. I believe the FCC rules state that in a emergency, you may use whatever frequencies you can to get help. Personally if my life was on the line, the fcc rule book wouldn't matter a whole hell of a lot. I'm not promoting that amateurs use these radios to transmit out of band during non-emergency situations. I don't think anyone that doesn't have a license is going to get these radios anyway due to radio shacks strict policy on non-ham use. And I think ham's do a pretty good job in the first place of policing themselves.

>charging it - then took the battery off after five minutes and re-started it
>- all was perfect.

I've see that when connecting fully-discharged NiMH batteries to the
MAHA MH-C777 "universal charger".

My theory: Fully discharged NiMH batteries have high internal resistance,
much higher than when they are partially charged. Put them on a fast
charger, and the initial terminal voltage will be fairly high due to
the high internal resistance and high charge current, even though the
battery electrochemical voltage is low. Charge for a few minutes, and
the electrochemical voltage increases a bit but the internal resistance
drops considerably. This could cause the terminal voltage to *drop*,
if the voltage across the internal resistance is dropping faster than
the electrochemical voltage is rising. The charger senses a voltage
drop during charge, figures that the cells are fully charged, and shuts
off.

When this happens, simply disconnecting and reconnecting the pack causes
the fast charge cycle to restart, and this time the cells get fully
charged.

I have never seen this effect when charging NiMH cells that are only
partially discharged, and never with NiCd cells at all.

So, maybe it's just a quirk in the batteries, not a charger problem.
(Of course, a more intelligent charger could avoid the problem by
charging the cells for a few minutes at a lower rate before using the
full fast charge current).

>all when the value is under $20 (approx.) and they only charge a fee of $5 to
>clear ANY value through Customs, when it exceeds the $20.

In other words, Canada Post charges you the $5 handling fee only if
there is actually some duty or tax to collect. So you pay $0 or $5,
depending on the value of the parcel. Seems reasonable, particularly
if you're not in a hurry.

If you are in a hurry, Federal Express overnight shipments include
customs brokerage. You still have to pay any duty or taxes that are
due, but that's true of any (legal) way of importing stuff. You're
still paying for brokerage, since the fee is built into the FedEx
international shipping fee. But at least when the vendor quotes you
the cost of FedEx shipping, you know the total shipping cost, and the
package shows up at your door with minimum delay. And the customs
clearance actually happens at whatever airport the package enters
Canada, in my case in Vancouver where I live.

In comparison, it seems that when something is shipped via UPS
across the border, the UPS shipping fee doesn't include brokerage.
Instead of delivering the package, UPS sends it to somewhere in Ontario
for customs clearance, and they phone you up and demand extra money,
that you weren't expecting to pay, for customs clearance. Once you
agree to pay it, then they ship your package from Ontario to Vancouver
(or wherever). I'm sure it maximizes convenience and revenue for UPS,
but it's certainly a stupid system from the point of view of the
customer.

An individual pointed out to me the 259B is available mail order new at $189 plus $5.98 shipping and insurance, for a total of $194.98. I wasn't real happy as I paid over $200 for this about six months ago. Even though this is as good as new (used only four times), it is used. Hey such is life.

In light of the above I will sell the unit shipped for $150 firm.

Does anyone know how much power the exciter in the GE Master Executive II puts out? Also what is the input power range of the PA deck? Please E-mail me direct at: mjs@nolnet.net

Thanks

Mike

I built the Ramsey 2M kit a couple years ago. Works OK for a
simple rig. The feeling you get when it works is quite fantastic.
I could kerchunk a repeater, but didn't get anyone to get back
to me. I had thrown in a 'dip switch' just to set frequency easily
while I jack around, and started flipping through frequecies.
I tried 52 and it was dead, then went to switch to something
else, and got someone by accident. Once I figured out what
the frequency was (it was wierd simplex) I called out and the
guys came back to me. Turned out he had a HUGE beam,
and was trying to work someone about 15 miles from me. He
was over 60 miles away. Anyway, the three of us chatted for
about an hour, a lot about the kit.

Normal contacts aren't that much fun.

Are you refering to the universal charger that Radio Shack is
also marketing with their name on it?

I found it to be a fairly decent charger. But I bought it strictly for
my kids RC boat batteries with direct plugin, not the pins.

I have since used it for my 8MM camcorder batteries, and my
Nokia 2160 Cell phone batteries with the pressure pins. 99%
of my use now that the summer is over is the cell phone, and
then probably only once per week.

I was going to use it on the battery packs for my Icom and Radio
Shack HTs. But I won't use the pins. I have a 'drop in' that I made
for the Icom packs a long time ago, but depending on the packs,
some have diodes in line with the bottom contract screws to
prevent shorting if the packs contact something conductive.
You can charge though the pins, but you can't read voltage back
(reliably and easily) or discharge if they aren't direct connect.

And some packs, like the Radio Shack AA pack don't have
bottom screws at all. In that case, I just took an old credit card
and cut it to fit into the pack mount. Then I put conductive
copper tape on each edge for ground, and a wire wrapped through
two holes to make contact with the center of the pack. This
I connected to the charger I built that provides fixed current
at 45, 60, 145, or 160 ma rates.

Now I'm just waiting till one of the RC boat batteries go dead,
so I can grab the connector off of it and wire to the credit card
adapter for the battery packs, then use the charger/conditioner
on them.

I know, the charger came with an 'alligator' cable, but it's a pain
to use. I'm thinking of using an old telephone handset cord
(nice curled cord) about 2 feet long and putting a connector
for the charger at one end, and the credit card adapter at the
other. (Actually, I need two, since one of my Icoms is a u4,
with that TINY battery pack.)

3692. How to tune a circulator

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-08 00:00:00 UTC
From: "F.A. Pinkse" <franspin@ims.chem.uva.nl>
Message-ID: <366CDC68.2CFB005D@ims.chem.uva.nl>
Source record: 123596

Dear Amateurs,

It would be nice if we could retune a circulator from 160 MHz to 145 MHz
to test where the desense of our repeater is comming from.

Does someone knows how to returne a ferite crculator .
Particularly what to do if the tuning cap's are at their end. Do we add
some clever things?

It sounds stupid, but I have seen a schematic and procedure in a
magazine. I have given up looking for it. The memory is vivid, because I
can still see the page in front of me. At the time I readthe article I
did not have such device.

Many thanks,

Frans Pinkse, PA2FAP.

I second that. There's a group of folks in your country that have a whole lot of fun with amateur radio and with building, the G-QRP Club. I heartily recommend you get in touch with them. Start with George, G3RJV. His email address is g3rvj@gqrp.demon.co.uk, telephone 01706-31812. He's located in Rochdale, near Manchester.

The G-QRP Club actually has members all over the world, and its excellent magazine, Sprat, is always full of good projects of all levels of complexity. I highly recommend it to anyone interested in QRP, building, or both.

Roy Lewallen, W7EL

>if you're not in a hurry.

You're right there.

I work part time for Canada Post in the oversized parcels sorting plant (though I do not in any way speak for my employer), and can tell you a few things.

1 - For faster service, send your parcels "accelerated service".

2 - Make 110% sure to CLEARLY indicate the postal code, that is what we use to sort mail and if it isn't there, off to the dead letter office it goes for research (where it will languish a few weeks).

3 - If something is fragile, PAD and PACK is well. The little "fragile" sticker means nothing to us. It all goes in the same containers, and at the numbers of parcels handled, nobody has time to take special care of fragile parcels. People put fragile stickers on everything. (I've seel fragile stickers on boxes with steel engine parts so...)

My 2 cents worth...

3698. Yaesu FT-847 / Satellite full duplex mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-08 00:00:00 UTC
From: mackerma@ns.sympatico.ca
Message-ID: <366D42D0.42AE@ns.sympatico.ca>
Source record: 123602

Good Morning:

I have recently purchased a Yaesu FT-847, and have been using it on the Satellites.. with great success..

But.. I have a question concerning its performance when transmitting on 2m, and receiving on 3/4 m (436 Megs).

Has any one else been usung this radio for this mode of operation (satellite mode JA) and found the 2m transmitter to be 'overloading' the 430 mhz receiever, so much so that you can't hear yourself on the 'bird'?

If so, is this a common problem, and is there a 'known fix'?

I can be reached at mackerma@ns.sympatico.ca

Thanks.. 73 de Bruce VE1NB

3699. FS: Kenwood TS-870S and TS-570D(G)

For Sale, Kenwood TS-870S S/N: 90200062, this rig is 10 months old and the latest manufacturing run of the TS-870S's. This rig has the DRU-3 digital recording unit installed a $125 option, which allows you to record 4 different 14 second voice transmissions for calling CQ, sending your exchange or whatever. This rig is in excellent shape and is a 10 both electrically and cosmetically. I have all original boxes, manuals and documents, hand mic, software, power cord, and software manual for PC control of rig. Price is $1750 shipping included, FedEx COD.

For Sale, Kenwood TS-570D(G) S/N: 90400289, this rig was a late production TS-570D that has been upgraded to the TS-570D(G) model through Kenwood Service Center East at Virginia Beach, VA. I also have installed a IRAD 400 Hz CW filter which does a very nice job, better than Kenwood filter, this filter was $100 new. This rig is a 9 cosmetically and a perfect 10 electrically and still under full warranty for both the original rig and the upgrade, I have documentation for this. For this rig I have all the original boxes, manuals, receipts/documents RE: G upgrade done 4 weeks ago, hand mic, software for PC control, and power cord. Price is $1000 shipping included, FedEx COD.

Please contact me via email, I will be happy to meet you on the air to hear the rigs or talk with you on the telephone.

Thanks es 73,

>FROM BRIAN BURKE:
I don't think anyone that doesn't have a license is going to get
>> these radios anyway due to radio shacks strict policy on non-ham use. And I

ARE you kidding? I have met Dozens of non-ham people at hamfests looking to sell their Radio Shack ham gear that they bought new a few "years ago" for hunting, fishing, painting ect... There is no law against selling ham equip to anyone and I guarentee you can walk into any radio shack and say something like " I am looking for a gift for my "cousin or father-in-law" or whatever & the non-ham part-time worker who makes commission will fall over backwards to help you . And in most stores just walk in & say "how much is the HTX-242? "OK give me one with the extended warranty" This is not to fault Radio Shack as most ham stores would do the same, just pointing out from your post since you thought you didn't think "anyone" would be able to get a RS radio without a license, when fact I think most people would agree that Radio Shack is the easiest place for a non ham to quickly get a piece of 2M ham gear.

Model: RT-424, Height: 4.5', Shelf to top: 34.75, Base width 24",
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs Weight: 18lbs Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup! Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}
[D]
Forsale: Both New never used One MFJ 1272B & One 1272BX
microphone/tnc switch box. Includes all original info docs, manual,
& etc. New $39.95 each + shipping or sales tax. Asking $20/obo
each + shipping...
[E]

Forsale: **SOLD**
Kenwood SW-100B Power/SWR Meter. For 2mtr-70cm.
Measures 150w out from 1/4w-50w in fm - ssb. Great for
home or mobile with ac internal light. A real nice meter. It's
in mint shape. Included all original docs, manual, box & etc.
Works great... Price $60/obo + shipping.
[F]
Forsale; Star Micronics. NX-2420 Color Printer
With tractor printing. Includes complete users manual, printer
guide, tractor paper, printer cable, dust cover & extra printer
ribbon. It is scratch free & works great. It is as close to new
as it can be. Price $65/obo Must pick up! You can see how
well everything looks & works. Will include like new printer
cart/table for a few extra dollars.
[G]
Forsale: Wood Computer Desk/Cart with sliding printer draw
+ sliding keyboard draw. Nice compact cart/desk with rolling
caster wheels. Condition Fair-Good. A nice computer/printer
desk/cart for a student or small area. $55/obo. Must pick-up.

[H]
2 meter Cushcraft 8elem {ssb or fm} beam with 50ft coax,
RadioShack rotor & control box $80/obo for all.
[I]
Antron 99 with radial kit, 34ft telescopic mast w/ guy wire
attachments & 50ft of coax. $50 for all. Mast needs good
cleaning! The Antron 99 works great!
[J] 'Uniden Bearcat BC 590XLT' scanner. Has all bands
ham, wx, fire, police air & tech opened for more.. Many
features 'i.e. 100 programable memories, scans all band
ranges, instant scan wx, fire, police, air & more. Manual
and antenna included $90/obo Like new.. No 900mhz
[K]
Finally.. I have coax jumpers, guy-wire, L-N connectors,
elbow connectors, 8x coax, plus other computer extras &
more. This is something you should look at and see if you
need any of it or not. Rather sell than have all this just sit.

3709. Re: WTB: Yaesu FL7000 Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-08 00:00:00 UTC
From: Jon Hamlet <w4zw@home.com>
Message-ID: <vTbb2.195$UU2.134@news.rdc1.fl.home.com>
Source record: 123613
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Why would anyone want to use this auto-switching amp with other radios?

I have one and it works flawlessly with either my FT-1000D or FT-1000MP. I seldom used it with the FT-1000D and normally only use it on SSB, but it is quiet, quick, and auto switches with the transceiver. A little slow on the initial tune for each band, but lightning quick after it has stored the memory settings for each band. Mine matches up to a 3:1 SWR as well. Mine is three years old.

Jon, W4ZW

AGREED!

I have both the FT-1000D and the FT-1000MP. Had (Notice HAD) the TS-870DSP. Too much frontend overload for me. However, the ICOM 756 was a delightful surprise and the Kenwood TS-570D/G is a great little radio for the money. I've had them all and Casey is right. There's just nothing quite like the FT-1000D. I was in love with my TS-930SAT until I sat a FT-1000D next to it. Sold the TS-930SAT the next day.

>
>If so, is this a common problem, and is there a 'known fix'?

The only fix I know is the same fix you'd use with any other
mode J setup, a mode J filter. This assumes that the overloading
is occuring due to signal coupling external to the radio. A simple
test for this is to terminate the 2m side with a good shielded dummy
load. When you transmit now, there shouldn't be excessive desense
on the 70 cm side. If the desense is gone, then a mode J filter will fix
you right up. If the desense is still there, then you have a crosstalk
problem in the radio.

At least with my FT847, the level of crosstalk internal to the radio
is too low to cause a desense problem in mode J. But a mode J
filter external to the radio is needed to solve the problem of signal
coupling between the antennas.

I guess by the time you received this message, people might have
already sent you the needed info.

Anyway, the mod is performed on behind the display. You'll need to
take the top and bottom cover out, and pry open the LCD display. You
can compare the moded and unmoded one and find out the different.
Otherwise, send me a snail mail address or a fax number, I'll get that
out to you. The picture says a thousand words.

Good luck.

Just my 1 cent worth:

I think that the IC-736 is a feature rich rig. Considering your primary use of the rig is SSB, this radio can be just as good as, or better than those mid to low price range rigs.

All rigs you mentioned have one (1) thing in common -- DSP. If paying 2.5K to 3K is to justify the DSP upgrade, then I think that there is a better way out. Get an outboard DSP for your IC-736 instead. The remaining cash can be used for a complete 40ft tower setup with a big gun antenna, and a KW amp. The new configuration can give your station an overall 6 to 15 db gain. New rig yields no gain in signal.

If you have already gotten all the DSP and towers and stuff, and just want a brand spanking new radio, all of what I said is moot and thanks for spending time reading my comment.

Don't take me wrong. I like those new rigs, too! I am just in the position thinking about how to make my station hear and talk louder.

My IC-T22A can be configured with some funky frequency display, too!
I've never tested the RX band limit, but I go for the printed
specification and it works for me. I got this HT used and it been
moded to TX out of band. My assumption is that the RX might have been
opened up to a somewhat wider range.

3720. FS: Complete Yaesu FT-102 line

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-08 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <74jooj$3ng$1@ash.prod.itd.earthlink.net>
Source record: 123624

This is a spare station that I just don't have room for anymore. I'm asking $950 for everything.
If the complete station does not sell, I will sell the individual units in a day or so.

This is a complete FT-102 line (link to photo: http://home.sprintmail.com/~sentek/Ft102comp.jpg).
Everything is in top notch working condition and the transceiver has just been aligned and the
relays were replaced.

FT-102 includes these filters:

1. Wide CW filter by International Radio (1203.1, 500Hz)
2. Narrow Yaesu CW filter (XF-455CN)
3. Narrow SSB filter by Yaesu (XF8.2HSN)
4. Standard Yaesu SSB filter (XF-8.2HS)
5. AM Filter (XF-8.2GA)

The I.F. board contains one modification, the CW Filter Switching Mod by W1OT from FT Newsletter, July/Aug 1985. Includes FM board.

FV-102VM is the Digital Memory VFO for the FT-102. This VFO includes 12 memories, multiple tuning rates, scanning controlled by buttons on the microphone.

SP-102P matching speaker includes the phone patch.

FC-102 Heavy Duty Antenna Tuner: This tuner handles 1.2KW in
a band-switched Pi network configuration. Includes an in-line wattmeter with ranges of 20,
200, 1200 watts full scale, SWR meter (separate meter), and the FAS-1-4R Remote Antenna Selector. The FAS-1-4R is a coax switch that can be mounted inside the cabinet or right at the antenna location. It allows selection of four antennas from the front panel of the tuner (requires control cable). The tuner includes an extra antenna input which is useful for connecting a dummy
load and is selectable from the front panel. You can connect a separate rig to
another connector and switch the antenna tuner to that rig via the front panel.

MH-1 Microphone: This is a hand-held mike which includes buttons to control scanning when the
FV-102VM Digital VFO is in use.

Manuals for all of the above are included. This rig is very clean and in top-notch operating condition. The front panels of all units are very good to mint condition (some wear on the top and side sharp edges). The metal tops
and bottoms of the cabinets are in average condition with a few scratches but
no dents or dings (the previous owner apparently didn't baby his gear as I do).

Buyer to pay shipping and I will do it properly.

3721. Re: How does MFJ's 784B DSP,1026 noise eliminator work?

>helps but I need some heavy duty stuff!
>

I have 2 MFJ noise cancellers (the one without active antenna) and
this thing works wonderfully against power line noise, computer noise,
and locally generated noise like my shop vac and touch lamp.

My computer monitor, for example, generates very bad hash every 55KHz
on all HAM bands at the level of S7 to S9. The noise canceller can
bring it down from nothing to barely heard. Yes, the weak signals
will re-surface again once the local noise is gone. One can argue
that this is an expensive way to get rid of the computer hash, but I
have used up all my thinkable resources against my HP Kayak 300MHz
desktop computer.

This thing works very well with fixed noise source, one at a time. I
have 2 of them daisy chained to work against noises like power line
and touch lamp at the same time. This featuer is not documented, but
it works. Use the TX relay and don't count on using the auto-sensing!
I don't think it is a good idea for phone work. If the noise source
varies in amplitudes and phases, you will have a hard time catching up
with it. It is because there is no automatic mode and every
adjustment is man powered.

One final note: The noise antenna is very critical to the noise
eliminator. MFJ recommends using the same kind of antennas and
polarization to ensure phase and amplitude synchronization. I found
that a "ZigZag" wire that runs up and down and horizontally, will not
work very well to my station. I use a 40M Carolina Windom, and a 66
feet wire (as the noise pick up antenna) 20 ft apart, parallel to each
other. The result is excellent! You mileage might varies.

>no luck

To obtain a good nulling effect, the noise antenna must pick up
signals that are equal or better than the original signal -- without
much phase different. If there is a phase delay in the noise antenna
or weaker noise source (active antenna), you cannot null WWV. Here at
my shack, I can null WWV down from S9+40db to S5 with an external wire
parallel to my horizontal Carolina Windom 40.

>
>Also, to null a signal you adjust a phase adjustment knob. The
>movement of the knob on my unit was not smooth and thus, very

Bad mechanical construction is a known thing for MFJ products. Mine
didn't pass "my" QC department until I lubed the knobs.

>
>There were also two things that I found out only after reading the

>the main antenna, the only way I could match the gains of the main and
>aux (internal active antenna) was to crank the main antenna gain down
>to practically nothing.

Agree. That's why I didn't buy the model which has the active
antenna. Beside using an external antenna, I also use a wire running
along inside my shack to pick up computer noise. It works very well.

>
>2) The unit needs to be installed between the radio and the antenna
>tuner. This is difficult to do with a radio with a built in tuner. The
>manual mentions this fact and say that when a built-in tuner is used
>that the 1026 can only be used when the SWR without the tuner is <
>2.0:1.

Agree. But I hardly use the internal ATU because it won't tune the
Carolina Windoms 40. Some part of the antenna yield 3:1 and above.
My situation works with an external ATU.

I don't speak for the MFJ, but am a happy user of the noise canceller.
It's a good add-on, but not for everyone. You'll be disappointed if
your expectation is higher than what the noise antenna can pick up.

Just my 2 cents worth.

The FT-1000d may have a great receiver but the cw keying is very poor in the qsk mode. It tends to clip the dits making them sound too short and the cure is to add a lot of weight to your keyer which makes the sidetone sound bad. I my opinion, QSK is a must for contesting and dxing. It must be fast and smooth.

Could it be that the RX frequency on 436 Mhz. is very close
to the 3rd harmonic of your TX frequency on 2m ?
There wouldn't be much that could be done about this
considering the proximity of the TX to the RX (same box).

I have Sony ICF 2003 (earlier version of 7600G w/o synchronous
detection), a SuperRadio and the Grundig YB400.
I am not impressed by the SuperRadio in terms of selectivity. The audio
of the Super is the best, but if your trying to dig out a weak signal
among stronger ones, its leaves something to be desired. The YB400 is
very close to the 2003 in performance, altho I suspect the 7600G is even
better. Filtering is much tighter, and synchronous detection should do
alot. I personally like the YB400- the audio is much better than the
Sony altho not as good as the GE. Selectivity and sensitivity is
excellent, and it is very convenient to operate.

Good reasons. I heard a ham repeatedly call for one of his buddies on the
NOAA weather frequency. He had his volume set low, and thought he was on the
repeater. Accidents happen.
Also, my RS 2M was stolen from my car. And it -was- modified for MARS use. I
would feel pretty bad if it turned up in a public service jamming incident.

For an inexpensive am/fm comm broadcast radio, I've heard the GE Superadio is a good buy. They sell for around $60.

I have a Sony 7600G and have been very happy with it for shortwave and some ham listening. Audio quality isnt the best, and the ssb tuning is far from precise, but it's not bad for a $175 radio that easily fits in an overnight bag.

Well, MAHA came through with their excellent customer support. My unit was over a year out of warranty- however, MAHA still offered me a new MH-C777 and $30 credit. However, after a chat with the president of the company, I received an even better deal. I can't release much yet, at the request of MAHA's president, because it has not yet been released and not many people know of it- however, we are swapping even for a new model to be released in the next month. If this charger lives up to his accolades and its description, it will be incredible!
Anyway, now that you're scratching your head, I'll leave you to wonder. Check out the January AES catalog- it should be in there.
MAHA did an excellent job with their customer service- going over and above what many companies would have done. I have to recommend doing business with them- however, think twice about the MH101s- however, they believe that they have fixed the problem.

I'm not in any way related to MAHA, only a satisfied customer.
Terry

I am not shure about htr 10058-1, but the Huntron Tracker 2000 we use almost
always
when troubleshooting faults in diodes, transistors, capasitors shorts on a
printed circuit board etc.
It looks like a small oscilloscope. If you connect a diode, or emitter -base
on a transistor you
vill get a display showing an angle. If, ex. you gor a vertical line, it
indicates a short.
You can compare the scopedisplay with other(OK) components of eg. same type
and se if the picture is the same thereby it is easy to se if something is
wrong.
When you have started using this equipment you will always use it!!

Hi Rick,

Sure the TS870 lives up to the Kenwood tradition. If you don't have a problem with front-end overload (other hams close by) then this radio is one to love. If you like contests, have neighbor hams or live near high power CB types, then the receiver may swamp on you. If you don't have a problem with overload and like a digital S meter, you'll probably be just as happy with this Kenwood as any other new one you've purchased.

One should clarify that there is no software mod for the XMIT side
of the radio. There is a software mod for receive below 30Mhz,
which you have with the software you mentioned.

Ok radio. I can't get excited about it, but it seems to do the job.
It appears to have a growing number of adherents. I've played
with one, but haven't owned one.

>Kenwood TS-790

Die spawn of evil, die! (It will, thermal design sucks.)
This could have been a good radio, but Kenwood did
some things wrong which make it not a good radio.
Besides the awful thermal problems which will cause
PA modules to fail, they screwed up the sat mode
track tuning, and they only let you put the narrow filters
in the *uplink* side of the radio. Arrrrgh! The only
upside of this radio is that it does true simultaneous
dual band receive. I owned one of these pigs. Stay
away.

>Yaesu FT-736

This one's been the workhorse of amateur satellite
operating for a long time. It is long in the tooth now,
and it isn't really a great radio, but it still gets the
job done. Mediocre IMD performance. I had one
of these for several years.

A better solution is the IC275H and IC475H pair.
This provides top notch performance in the
satellite station, good in terrestrial weak signal
activities too. Downside, expensive, and you
have to deal with two separate boxes. I've got
these.

A newer entry in this area is the FT847. This is
also not a great radio, but it is a good radio for
satellite work, and it does HF too. The major
downside is that it has only fair IMD response,
so strong nearby stations can be an issue if you
want to do terrestrial contests. HF performance
is about on a par with the IC-706, ie not great but
good enough for casual operating. If you want
all in one box, this is definitely a radio to consider.
I just recently bought one. It won't equal the

IC275H/IC475H, but it is not bad at all as an
all in one radio. With the current discounted
price, it is worth a look.

That's a pretty fair assessment...

I had one for a little over a year, and ultimately sold it. It's a good radio, it just had a few quirks I didn't like - and the thumping drove me nuts...

If only Kenwood had allowed for optional filtering, I probably would have learned to live with the other little 'irritants' and kept it...

LKOJ-

I think the 9100 is the one I have. It is a digital phone, but NOT spread spectrum. I found that I could pick it up on a cheap counter that goes beyond 1000 MHz. As I recall, it has several frequency pairs that can be stepped-through.

No doubt your attempts to detect the signal were with instruments having no useable response at 900 MHz. After counting the frequency, I attempted to receive it on a Tandy Pro-2006 scanner. I wasn't able to detect it. I suspect the modulation spectrum is so close to white noise as to sound like an open squelch on an empty channel. I was able to receive another analog phone, which used the same frequency pairs as the 9100.

If you succeed at extending the range, you may run into similar problems found with the old 47 MHz analog phones. If you make it work at a greater distance, you increase the probability that another phone will be within its range. You may not be able to hear the other phone due to the digital coding, but the channel can be blocked. As population density increases, more channels might be blocked by other phones.

I posted this late at night and forgot the model #.
Actually I have two

One is a DATA I/O Model 22

And the other is DATA I/O model 29.

I was hoping to copy some 27128 ROMS with the
DATA I/O 29. Will it do this? And how?

In article <74l51q$n54$2@news.jump.net>, joe@widind.com says...

I have talked with a few of the head honchos at Radio Shack and they
are, indeed, coming out with new ham models -- see them in the recently
released 1999 Radio Shack catalog. Any rumors that they are getting out
of the ham business are just plain wrong.

>

Again,
it is possible to replace stock filters with better filters like International Radio 2.1 kHz bw 8 MHz and 455 IF. There is a room on the side of PC boards, old filters are removed, new filters are wired in with short pieces of coax. This makes it completely different radio, DSP and selectivity settings work much better, no overload. Older sn had problem with gain distribution, newer radios have that fixed, Kenwood has the mod to fix that. You need steady hand and good eyes, working with SMD chips.
Love it now, sits next to IC781 (modified too).

This is good news - maybe. I have often thought the 202 was one of
the best products the shack ever released. I understand it was based
on a Icom design and built by Maxon for Tandy. I wonder/hope if the
new models will live up to the cost - excellence ratio of their
predecessor.

> Taking an amateur transciever and modifying it for out of band operation is
> illegal, even if you have a license to operate it.

Tom-

This is just not true in the United States. There are some cases where a Ham would make such a modification for Ham use. For example, you might modify an all-mode HF transceiver to cover a 4 MHz segment, in order to cover the full Six or Two meter band using a transverter.

> Marine /
> aircraft / etc, HF transcievers must be type accepted by the FCC for the
> intended application.

I believe this is the key to the law. In other words, it may not be the modifying that is illegal, it is the using of the modified equipment. That said, it is a less than perfect world. If you do the modifying, a lawyer might make a case against you for aiding and abetting the crime of using it.

The cases where illegally modified radios get a lot of publicity frequently involve someone maliciously interfering with public safety services or other emergency communications. Because of the seriousness of doing this, you are taking a big chance using a modified radio to call for help. If you find yourself in a situation where you must, be sure the situation is so dire that you are willing to risk the consequences, in case they don't buy your "life or limb" emergency justification!

I suppose a "bush pilot" wouldn't always be within range of a Cell Phone site. However, I don't understand why one would modify a Ham rig for illegal aircraft use, rather than using a legal aircraft radio for Ham use. Doesn't the FAA inspect all aircraft to be sure equipment is on the approved list?

3816. Best VHF/UHF rig or combination of rigs??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-09 00:00:00 UTC
From: f117ab@ameritech.net
Message-ID: <366F0CFC.CA00FB65@ameritech.net>
Source record: 123490

I would like to get the collective opinion of the best contest VHF/UHF transceiver or transceivers combination.

The criteria;

1.) Must put out sufficient power to be competitive "barefoot" and be able to drive a highly competitive level amp.
2.) Must have outstanding receivers and strong signal handling capability.
3.) Must cover 2M, 70cM, 23cM.
4.) Would be real neat to cover 2.3GHz and 6M too. (to make this really tough I could throw in 903. . .)

I suspect this combination does not exist in a multiband transceiver but would like to get input for the creation of a VHF/UHF contest station from scratch.
Please respond to the newsgroup so we can get debate and multiple opinions on the topic.

Thanks,
Art k9xf

I have been messing around with computer control of my Kenwood TS-870. So far, I've figured out how to do most things, but one that I can't figure out is how to read the status of the menus. The command is EX, but it only reads the currently selected menu. If you try to pass a menu number to the EX command, the radio rejects it. For reference, I played with the RCP95 program that comes with the radio. It too seems unable to read any but the current menu. When you select the option to update the computer copy of the menus, it prompts you to step through the menus using the menu knob, so perhaps this is something that Kenwood left out.

Some time ago, ten or so years ago, a fairly new amateur asked me much the same question.
I answered him by suggesting that he put away his vhf radios and go back to operation hf for a little while. The when he got back to hf for a few months he could pull out his vhf radios but to put more emphasis on hf then vhf.
In my opinion, you can learn more about the 'essance' of amateur radio on hf than you can on vhf.

Is the 'downloadable manuals' section new? I'm just about positive I
didn't see it the last time I looked at the site.

Thanks for the pointer.

>I read it last night and am planning on some tests.

Ditto here. Then it's time to look at writing some software. In any
case, I hope to have some open source Sweepstakes logging software for
Linux(or, more precisely, in Perl) by next November. Plus, I'd like to
have some tools to directly tweak a few things that are a little
unwieldy from the front panel(go directly to a particular memory or
frequency, adjust the keyer speed, pick a mode without having to cycle
through the modes, etc).

Source record: 123577

Rick,

I like the TS-870 quite a lot. I think it is one of the best rigs out there today. The radio has a good receiver and I doubt you'll be able to hear much better on any other radio. The transmitter has good sounding audio on SSB and it is one of very the few rigs that allows you to adjust the high and lowpass filtering on your output signal. You can also adjust the CW signal rise time as well as the automatic keyers weighting. The automatic keyer is very full featuered.

Another plus, all the filtering is built in to the radio. There are no optional filters needed (and no place to install them).

The radio has a steeper learning curve than other radios. It will take you a while to learn all the features.

I guess that main negative is that the operator interface is a little rough. For example, the only way to move around with direct frequency entry is to enter the entire frequency or to step up and down between bands (which means you have to go through 17m to get from 20m to 15m. If the auto antenna tuner is engaged, it tries to retune when it gets to 17 (which does it no good for my antenna - which is only good for 10, 15 and 20). Also, some of the features, such as DSP level adjustment are on the menu, not on a front panel knob. The adjustment is there, I just want to be able to adjust it without going to the menu system.

Right now, I'm exploring writing a computer control program for the 870. The computer can control just about everything on the radio (the only thing I haven't found out how to do is to read the menu settings, but the computer can write them). It looks like it should be possible to mount the radio away from the operating position and control everything remotely via a serial port. The program will also allow me to address the operator interface shortcomings mentioned above.

Mark

Easier said than done. Many are limited as to what they can put up in regards
to HF antennas. After listening for awhile, they'd probably be bored with HF
anyway.

MFJ Deluxe Power Sentry, Model MFJ-825.

It has two meters on its face, one for forward power, and the other for reflected power or SWR. It can be switched to measure average power, peak power, or SWR. It has 3 switchable modules installed, to measure forward power as follows:

HF - 200 or 2000 watts Full Scale.
HF - 2 or 20 watts FS.
VHF (50-175 Mhz) - 20 or 200 watts FS.

NOTE: Each measurement module has its own set of "in" and "out" UHF connectors, so no fiddling is necessary to measure power output of different radios.

Its case is black metal with chrome trim--no plastic! It's very accurate and in near-perfect cosmetic condition. It dates from . 1983. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers in 1987. You get the manual with it.

Entire assembly bought for $240 in 1983 dollars. The price is $150 today.

Its case is black metal with chrome trim--no plastic! It's very accurate and in near-perfect cosmetic condition. It dates from 1983. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers in 1987. You get the manual with it.

Total original cost in 1983 dollars: $240 You pay $150.

Model HD1418 Active Audio Filter -- dates from 1988.

Assembled solid-state unit in mint condition. Attractive design. Has bandwidth settings for CW, SSB, and RTTY. The CW filter includes a tunable notch/peak filter with variable BW. The unit also has high and lowcut capabilities to get rid of "rumble" and "hiss". It has its own audio amplifier.

Very dark brown metal with red and white lettering--no plastic! Coordinates with the Heathkit rigs of the era. In perfect cosmetic condition. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers shortly after I assembled it. You get the manual with it.

Asking $100

A quick way to find out which of the only 14 possible calenders a year
is, is to look at the "Perpetual Calender" that's in "The World Almanac
and Book of Facts". It also used to be in the phone book here, and
maybe still is in some of them.

The CW that he is hearing is not really CW. The NDBs (non directional beacon) transmitters identify with Morse code. It is amplitude modulated on top of the carrier. Occasionally you can turn an AM BCB radio down to the low end and hear the beacons if they are close by.

By the way, these things are scheduled to be phased out in another 5 or 10 years. Any chance of getting a ham band in this area?

If you're REALLY intent on building a competetive contest station
(non-mobile), you have but one alternative: obtain a good HF
transceiver that has an outstanding receiver (low phase noise, good
strong-signal handling, noise blanker that WORKS, etc.), and use
transverters. Depending on HOW serious you are, you can use xvtrs
from (in order of performance, and $$$) MFJ, TEN-TEC, Down East
Microwave, or SSB. Other xvtrs are available (old stuff from Kenwood,
Yazoo, etc.), but since you're assembling a "killer" station, you
probably won't want to bother looking for these.

Hello,
I recently purchased a TS130S XCVR for which I am in need of some info.

1)Is there any way to adjust the analog dial to track with the digital
readout?

My analog dial readings vary from 7 to 12 Khz from the digital readout.
The difference
increases as I move up the band. However there is exactly a 10 Khz reading
between the
marks on the dial as indicated by the digital readout.The digital readout
seems to be accurate as I checked it using WWV and the calibrator as stated
in the manual.

2) Is this a normal condition for this radio?

3) Can the date of manufacture be determined by the serial number?

Any info is appreciated.

Just below the AM broadcast band, at 510-535 kHz, are air radionavigation beacons. In the U.S., most of the spectrum from 20 kHz up to the AM band is allocated to maritime mobile or aeronautical radionavigation. This is generally true of the rest of the world, too, except that Region 1 (which includes Europe) uses 148.5 to 255 or 283.5 kHz for additional AM broadcasting.

Anybody out there found a way to make the Alinco DJ-S11T and DJ-S41T stop on a busy freq. and stay there until the signal goes away??? The way it is now it stops on a busy freq. and stays about 4 seconds then goes on scanning even though the freq. is still busy. Someone left me a message that there was something in the manual about it but I have looked the manual (not very big only a leaflet) over very carefully and there is NOTHING there. Sure would like to have SCAN and HOLD. Please Email direct. tonycash@netzero.net Thanks in advance 73 de Tony, KD4K

>1)Is there any way to adjust the analog dial to track with the digital
>readout?

There is a milled(ridged) disk between the tuning knob and the display. Hold the knob to keep it from turning, and turn the milled disk. This will change the mechanical dial without changing the digital display

.>2) Is this a normal condition for this radio?

Well, I don't know, but on the TS-180, a nearly comtemporary rig, I have about 1-2 kc discrepancy from the bottom of a band to the top.

Hi! I do have the tubes listed below for sale:

4x 4-400A(pull from working equip.) $40.00 each
1x 280(used) $25.00
2x 232(used,tested) $8.00 each
1x 33(pull) $3.00
1x UX-112(used) $20.00
1x UX226(used) $20.00
2x UX171A(used) $20.00 each
3x 8791(pull,tested) $100.00 each (datas available)
2x 6550(few hours used,tested,1ST & 1GT) $50.00/pair
2x 5881 N.I.B. $40.00/pair
2x 5881(used few hours only,tested) $25.00/pair
1x 2050A(new,Phillips,usa) $10.00
2x 2050A(pull,tested) $5.00/each
2x 8417 N.I.B $50.00/pair
1x 931A N.I.B RCA $20.00
3x 7360 N.I.B. GE usa $30.00 each
3x 6267 N.I.B GE $18.00 each
2x 6267(used,tested) $8.00 each
1x KT66 GEC n.i.b. $70.00
1x 272A Western Elect. NEW $60.00

All pulled tubes are from working equipment,unless mentionned
as new(NIB),if you are interested in some of them,
please email me for more informations.Amounts in U.S. funds.

Look for two new HTs (UHF and VHF) late this year or early next year.

Should be like the "mini HTs" that are popping up everywhere.

Doubt if they will be comparable to the 202 and 404.

Kevin

In the US, there is an 'Experimenters' Band from 160-190 kHz. There
are power limit and antenna restrictions, but you do not have to have
a license for this band.

In other places, such as Europe, hams have access to a band at 135.7
to 137.8 kHz.

Hi....
I have a TR-7950 that won't transmit (everything
else works fine). The problem is the PLL UNIT #x50-1900-10.
I verified this by borrowing that particular board, out of another
7950.
So.... I need to find myself another board with the above part
number.

===Anyone have a junker or parts 7950 out there ?????====

The board I need is the one on the bottom of the radio, at the back.
It's part # is PLL UNIT x50-1900-10.

I'd be willing to pay $30.00 for one of these boards in working condition.

email me if you can help....

For Sale, Kenwood TS-870S S/N: 90200062, this rig is 10 months old and the latest manufacturing run of the TS-870S's. This rig has the DRU-3 digital recording unit installed a $125 option, which allows you to record 4 different 14 second voice transmissions for calling CQ, sending

your exchange or whatever. This rig is in excellent shape and is a 10 both electrically and cosmetically. I have all original boxes, manuals and documents, hand mic, software, power cord, and software manual for PC control of rig. Price is $1750 shipping included, FedEx COD.

For Sale, Kenwood TS-570D(G) S/N: 90400289, this rig was a late production TS-570D that has been upgraded to the TS-570D(G) model through Kenwood Service Center East at Virginia Beach, VA. I also have installed a IRAD 400 Hz CW filter which does a very nice job, better than Kenwood filter, this filter was $100 new. This rig is a 9 cosmetically and a perfect 10 electrically and still under full warranty

for both the original rig and the upgrade, I have documentation for this. For this rig I have all the original boxes, manuals, receipts/documents RE: G upgrade done 4 weeks ago, hand mic, software for PC control, and power cord. Price is $1000 shipping included, FedEx COD.

Please contact me via email, I will be happy to meet you on the air to hear the rigs or talk with you on the telephone.

Thanks es 73,

I found this homepage to have some helpful info, and links to others:

http://lonestar.texas.net/~wb4huc/mobilehf.htm

I've used a smartuner from SGC Http://www.sgcworld.com and a whip, and
I've used a screwdriver from High Sierra antennas. For simplicity, the
smartuner won hands down, but have made better contacts with the
screwdriver.

Refurbished and ready to go. This is the CD rotor that does not have the brake system and uses an impulse system to signal the control box of its movement. Good for a compact HF beam
or a uhf vhf antenna system.

$150.00 plus shipping.

> 73, Fred, K4DII

Folks,

I've tried a similar experiment with my 9100 ATT phone. In my case, I
used the extended receive capability of my ICOM ICW32A HT to listen for
the signals. They do, in fact, sound like static when received on an FM
rig. By pressing the channel button on the 9100, the phone could be
made to jump up in frequency by some standard increment each time it was
pressed (it may have been 100 khz, I don't recall). I didn't take it to
the limit in order to find out how many channels were available.

Matt,
the "shakey big stick" is no longer made, but this is no indication of its performance. The company was bought out, and the directors felt that CB antenna were not of the right ilk for the new company structure. However, in comparison to the A99, there is very little difference, the main attributes are listed below and are in relevance to the A99.

3 inches shorter
8 db gain
2 section
2000 w handling

hope this helps you Matt, for any further info please e-mail me direct.

Regards
Lee

Fred,

You are absolutely correct. I should not have said that modifying a radio is illegal, but that using a modified, non-type accepted radio is illegal. And I agree with you, I don't know why most people modify the gear anyhow. I

have an FT-50 HT and contantly hear about all the mods that can be made to it, most all of which allow for illegal operation. I am waiting for a legal mod, making the darn thing transmit and receive on 220 MHz.

3913. ICOM IC-Q7 power supply

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-10 00:00:00 UTC
From: llefczik@motown.lmco.com
Message-ID: <74ot09iim1@nnrp1.dejanews.com>
Source record: 123510

Can anyone tell me about power to this little radio?

I am using a DC adapter in the car from the cigar lighter. Is there any harm in powering up the radio as the car is turn on? In other words, can the IC Q7 be left in the ON state and apply power to have it come on without harming the radio? I know it can be done (I have left it on and unplugged the adapter and the radio comes on when it is plugged in again), but my IC706 book warns not to power-up in this manner, but to have the power applied first before turning on the radio or damage may result (anyone know why?).

Also, what is the maximum supply voltage the radio will tolorate? My adapter has 3, 4.5, 6, 9, 12 VDC available. Will an increase in supply voltage to 4.5 V increase power output of the transmitter, or just burn out the radio?

One final question (for now). When you remove the back cover, there are 2 tiny trim pots marked "V" and "U". What are these?

>
>Is desense using mode J a common problem? Does the FT736 or FT726 suffer
from
>the same problem?
>
>Tim Leonard AA6DQ

Yes, Tim, it is a very common problem. It has little to do with the radios and nothing to do with the birds. We had to use mode J filters for Oscar 8 many years ago...in fact, I'm using the same one ...or at least was, until I moved and had to take the antennas down.

I have used the FT-726, 736 and now the 847...the mode j desense problem was the same on all of them, and also on everyone else's radios, no matter who the manufacturer was. It even existed on my high end kenwood hf rig with a transverter by microwave modules.

Make a Mode J filter if you intend to use Mode J...it's a rare circumstance where it is not required. 73

3921. ICO IC-706 mic audio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-10 00:00:00 UTC
From: llefczik@motown.lmco.com
Message-ID: <74p77t$s4t$1@nnrp1.dejanews.com>
Source record: 123518

I got drastic one day and "went all the way" and have had good reports on audio since. I did my testing with some buddies on 2 Meters FM since they know best what my audio should sound like. The mic looks like a speaker mic without the speaker. After taking the big rubber disk out, the mic sounded better. The next step was to remove the metal disk to let more sound in - everyone said this sounded bad tonal wise, hollow, tin can, trash can.... Thinking about it I realized the mic looks like a speaker mic without the speaker. (Audio Out is available on the jack, where is the speaker anyway Icom) Then the light went on. If you look at any speaker mic you will see a tiny hole for the mic. Well I pulled the mic element out and figured, before I become drastic I'll get reports on the audio with the element out of the case; good reports from all, sounded like other FM rigs I use. I then got out the drill and the smallest drill bit I had and from the inside of the case drilled a hole. I put it all back together and reports were the same as when the element was out, good audio, natural sound. Some day I hope to find that thin black cloth that should go in front of the element to reduce dust and moisture and the light reflection from the element when you look at the mic. After I closed everything up, I had a thought (too late as usual). The element holder inside of the case has a slot down one side. What if the designer had intended the element to be put in the other way? What would it sound like if the front of the element faced the open space inside the case instead of being pushed against the front of the case with a rubber grommet stopping most of the sound? If any one wants to take the time to just open the mic and just turn the element over so the wires slide down the slot into the support first before drilling a hole, let me know the results. Also, one time when I opened the mic case, a small coiled spring fell out. I imagine it is for the PTT switch, which works just fine without the spring. I can't figure out how it goes back in. Any help?

3922. ICOM IC-706 POWER OUTPUT adjustment ????

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-10 00:00:00 UTC
From: llefczik@motown.lmco.com
Message-ID: <74p8bc$t34$1@nnrp1.dejanews.com>
Source record: 123519

I read on the Net that the IC-706 runs just fine at 15 Watts on 2 Meters. (Yes, the original 706) Looking in the back of the Owners manual I see that ICOM was very clear on where the adjustments for Output Power is for HF, 6 Meters and 2 Meters.

Has anyone played with these adjustments to see how far the power will go?

Why are they not at the MAX from the factory?

I tried something similar with a 900 MHz analog phone from GE. In my case I was interested in ham radio possibilities, since it already transmits FM in the 900 MHz amateur radio band.

I found that the RF module was controlled by a serial interface to a microcontroller. I put a logic analyzer on the serial lines and figured out how to prevent it from changing channels (I think). The next step was to make my own microcontroller do the controlling. Due to several reasons (being lazy was one of them) I didn't get past that point.

From: weiss@tds.net
Message-ID: <74p9nt$1af@news2.tds.net>
Source record: 123524

My 2M Yaesu FT-2400 is mounted in my mobile.

But every time I turn on the engine, the rig goes on, too, despite having been turned off, and all the memories get blasted away.

I replaced the battery probably a year ago and it seemed to be OK for a while, but I don't understand why starting my engine should trigger the FT-2400 to turn on and ditch memories.

It's plugged directly into the cigarette lighter socket.

Any ideas?

Thank!

Jeffrey Weiss N0IRR

> the radio?

I wouldn't, I would plug the adapter in, have the car's electrical system stabilize(few seconds at least) and then turn it on. Some mobile radio's state, you can turn them on, and then cycle the power from the DC power cord. But unless it stated it in a manual, I wouldn't. The other thing is the adapter, with the different voltages available, it could just have resistors in side, so if you start your car and your voltage spikes up to, 20 volts, your adapter would maybe jump up to 6.6 volts or so. Or if you bump the selector, you could pop your radio. Either build or buy a decent, single voltage, regulator, w/transit protection. Or maybe a three "D" battery holder, with a cord going to the radio. Without the protection, if your cars electrical gets flaky, you could loose your radio.

> Also, what is the maximum supply voltage the radio will tolorate? My adapter
> has 3, 4.5, 6, 9, 12 VDC available. Will an increase in supply voltage to
> 4.5 V increase power output of the transmitter, or just burn out the radio?

I would guess burn out the radio, doesn't it normaly run on 2 AA's. The internal components are spec'd within a certain range, and usually pretty tight. I would guess anything over 3volts has got to be burnt in heat through a regulator. You might get a little more power from the finals, there again, I don't think it would be worth risking your radio. I hope this helps. 73's KF6ATH Zac...

Why don't you run your car wide open all the time?? If the speed limit
is the problem then run in a lower gear to get max rpm's. Same principle
on the radios, they last longer when not stressed.

My IC-Q7A does not have nor allow for an external power plug. The only
plug is for a speaker/mic or cloning cable connection. I don't think
it would be good to plug a power cord into this socket.

Is this a joke posting? These typically go for $35 to $50 and are ,at best, useless. I had two, which were typical of the 6 or so I've seen in operation. Drift in the wind, never know where they are really pointing, sluggish, etc. An Alliance HD73 is far, far superior and sells for about $100 or so used. HF beam on a 22? Never, and they say so in the book. Throw this thing in your thrash can and save others the grief it will surely give them.

I heard it's supposed to be three HTs. A VHF, UHF, and a
dualbander.

If you're on good terms with the manager, when the store is
empty (at Christmas time? RIGHT!) have him start 'browsing'
the stock numbers on the computers. They gotta be in there
WELL BEFORE any store has one to sell.

It's known as long wave (generally 150 - 500 KHz on most receivers).
It's used in Europe as a broadcast band. Some people on the east coast
pick it up. Other stuff is there also, but I don't know what.

They might have been confused with Azden. Azden didn't go out of business,
they stopped selling the the U.S.

Well several responses have been offered... but I'd like to add a
historic note:

500KHZ used to be the international maritime distress frequency, many a
ship sent out a CW SOS on 500KHZ (Hasn't everybody seen "Titanic";). I
had the priviledge of spending many hours "guarding" the 500KHZ distress
frequency during my time in the U.S. Coast Guard, as well as being the
operator who responded to several SOS's (an event which will definately
get your heart racing). The frequencies slightly above and below were
used to pass commercial traffic as well as come freq's that were used to
broadcast maritime weather and other warnings. Alas, this was all CW and
these frequencies have been abandoned for that use (I don't know what
the official FCC/International use for 500KHZ is these days)....

Those were the days when ship to shore communications were the perview
of professionals... (boy could some of those guys pound a key!)... now
all you need is a celluar phone....

Sorry your radio didn't perform to your needs Vic. Mine works fine on CW as
well as AM, FM & SSB. I have copied QSOs on the 40 & 20 meter CW bands with
no trouble. I get a clear sharp CW note. I have tried it with battery power
and an AC adapter (not the recommended on but one I have with much more
current capacity than required).

I have two of each. VHF and UHF. These are 2ch the 42 is 4 watts and the 52 is 5 watts. These are beautiful radios like new with dependable communication for longer distances. They are loaded with features and the price is right. $175 each. They are just like the GP68 in design. Come with instruction book. Thanks Chris VE3NGW/W4 Florida

3972. FS: Complete Yaesu FT-102 line - for the last time!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <74sc3g$4qp$1@oak.prod.itd.earthlink.net>
Source record: 123270

I have an attractive trade on the table for this gear, but would really like to do
a straight sale. If you are interested, call soon or it's gone.

This is a spare station that I just don't have room for anymore. I'm asking $950 for everything.

This is a complete FT-102 line (link to photo:
http://home.sprintmail.com/~sentek/Ft102comp.jpg).
Everything is in top notch working condition and the transceiver has just been aligned and the relays were replaced.

FT-102 includes these filters:

1. Wide CW filter by International Radio (1203.1, 500Hz)
2. Narrow Yaesu CW filter (XF-455CN)
3. Narrow SSB filter by Yaesu (XF8.2HSN)
4. Standard Yaesu SSB filter (XF-8.2HS)
5. AM Filter (XF-8.2GA)

The I.F. board contains one modification, the CW Filter Switching Mod by W1OT from FT Newsletter, July/Aug 1985. Includes FM board.

FV-102VM is the Digital Memory VFO for the FT-102. This VFO includes 12 memories, multiple tuning rates, scanning controlled by buttons on the microphone.

SP-102P matching speaker includes the phone patch.

FC-102 Heavy Duty Antenna Tuner: This tuner handles 1.2KW in
a band-switched Pi network configuration. Includes an in-line wattmeter with ranges of 20, 200, 1200 watts full scale, SWR meter (separate meter), and the FAS-1-4R
Remote Antenna Selector. The FAS-1-4R is a coax switch that can be mounted inside the cabinet or right at the antenna location. It allows selection of four antennas from the front panel of the tuner (requires control cable). The tuner includes an extra antenna input which is useful for connecting a dummy load and is selectable from the front panel. You can connect a separate rig
to another connector and switch the antenna tuner to that rig via the front panel.

MH-1 Microphone: This is a hand-held mike which includes buttons to control scanning when the FV-102VM Digital VFO is in use.

Manuals for all of the above are included. This rig is very clean and in top-notch operating condition. The front panels of all units are very good

to mint condition (some wear on the top and side sharp edges). The metal
tops and bottoms of the cabinets are in average condition with a few
scratches
but no dents or dings (the previous owner apparently didn't baby his gear as
I
do).

Buyer to pay shipping and I will do it properly. Will deliver up to 300
miles or so, or
meet you halfway.

Source record: 123350

Hi,

Looking to purchase a pre-owned Motorola UHF VISAR portable that's in good to excellent condition. Unit must tx/rx in the 440 MHz ham bands. No need for a charger...just looking for radio, antenna, and battery.

Would need to have the radio programmed to my specs by the seller.

If anyone happens to have one that they would like to part with at a reasonable price (since no charger needed), please email:

pm1072@aol.com

> analog phone, which used the same frequency pairs as the 9100.

I have a 9100, as well as a newer Toshiba phone based on what appears
to be the same radio. I looked at the output of the telephone on a
spectrum analyzer, as well as looked at the radio deck. The 9100
uses a Motorola MC3418 CVSD chip for analog-to-digital conversion,
and the resulting data stream (something between 30 and 40 kbits/s)
is sent using wideband direct-FSK. RF carrier and LO signals are
synthesized, apparently using a 150KHz reference frequency (judging
from the channel step and apparent reference-feedthrough spurs).

The resulting signal is over 100KHz wide, most NBFM receivers (scanners)
won't notice this at all, though an RSSI circuit (S-meter) may indicate
the presence of a signal.

Technically speaking, this is not a spread-spectrum signal, it is
really just a wideband FM digital radio, and it most certainly does
not appear to be encrypted. If you were clever, you could buy an
MC3418 chip and build a decoder, along with a wideband FM receiver.
Practically speaking, it does make the telephone virtually impossible
to intercept.

Using a spectrum analyzer, I'm certain I counted 10 channels,
and the telephone manual/box might even specify 10 channels.

I previously posted that the channel step was 150KHz, and I
recall now that it may have been 300KHz, but the synthesizer
operates with a 150KHz reference. Now that I think about
it, I'm pretty sure this is correct. While I did not record
the actual frequencies, I'm fairly certain they're on a 50KHz
boundary and step by 300KHz.

3990. FS: TIMEWAVE DSP-9 PLUS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <19981210202302.08390.00000761@ng-cr1.aol.com>
Source record: 123353

For Sale Timewave DSP-9 Plus. Very good condition, with manual. I just don't need this item anymore since my new rig has all of the filtering I need. I will ship in the 48 for an $85 US Postal Money Order.

Thanks,

Chris "KX0Y"

3991. FS: Johnson 300 Watt Antenna Tuner

Source record: 123358

Hi. I'm looking for information on where I can get the best price on the PC cloning cable which is compatible with the newer ICOM/YAESU line of radios (VX-1R, Q7A, W32A, etc.) Icom calls it the OPC-478, YAESU has it bundled in a software package. So does anyone know who has the best price on this PC Cable? I don't need any of the software, only the cable itself. Or, you *YOU* have one you'd want to sell me, also let me know. Either way, please respond via email. Thanks alot!

Source record: 123363

Hello to all!

I have a Ramsey Electronics 2 meter amp kit. It's assembled with a
RF Transmit/Receive switch. This is the 1 watt in, 10 out up to 30 watts.
I built it and it's in a metal construction box with on/off switch and led
power light. SO-259 connectors on the back and wired ready to go.

I am looking for $40.00 plus $3.00 priority shipping. The two kits
together cost $50.00 plus $15.00 worth of parts into it!

E-mail me direct.

Pete

One possibility for this factory setting is that the radio has to meet certain spectral purity requirements. Many of the radios produced today can provide more than their minimum specifide output, but what happens to the harmonic and spurious outputs? These are adjustments I don't think I would mess with.

Anyone describe the 4-wire remote antenna-tuner protocol? Obviously, 13.8VDC and GND are 2, but how to the other two change levels to operate the remote AH-4 tuner? Thanks.

Chuck (K2NW)

4023. Re: Compare Icom 756 to Kenwood 870

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: merbaugh@infinet.com
Message-ID: <367352f2.1432320@news2.infinet.com>
Source record: 123386

Tom,

I own both the 756 and the 870. Fortunately, I can afford to keep both, but if I had to choose between them, I would keep the 870.

Assuming both radios are in similar shape an even-up trade seems like a good deal. I see used 756's going for less than used 870's.

Performance wise, I think the 870 is a better radio. There may be a few signals you'll pull out with the 870 that you couldn't with the 756, but I doubt you'll find many.

The user interface of the 756 is much better. The only way to enter a frequency on the 870 is to enter all digits. The only way to change bands is to enter a new frequency or step up or down through them (no direct access). The numeric entry buttons are arranged awkwardly (2 rows of 5). There is nothing like the triple band stacking on the 756.

The keyer on the 870 is much better than the keyer on the 756, For example, you can set the keyer emulation and also query or set the keying speed.

The computer interface on the 870 is built in (i.e. doesn't require an adapter, just an RS-232 connection) and is much more thorough. You can do just about anything from the computer that you can do from the front panel. I think it would be possible to mount the radio remotely and only use the computer interface - this is not the case with the 756.

The choices of filters on the 756 are very limited and you can only add two additional ones. While you can't add any filters to the 870, there are a lot of options already built in.

The 870 is a more complicated radio. It has more features and adjustments that have to be learned. OTOH, the 756 has simplified things which means there are less adjustments and for most operating conditions, the built in choices are adequate.

The 756 can be set up to use a receive only antenna, but there is no automatic way to do that with the 870. The 870 has two antenna ports, but I haven't found a way to automatically receive on one and transmit on the other.

The 870 however, can be set up to use an external receiver, but the only to add an external receiver to the 756 is with external hardware.

4026. FS: Kenwood TS-870S and TS-570D(G)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: "David E. Shelton" <w4des@iolky.com>
Message-ID: <36716d3c.0@205.238.18.7>
Source record: 123389
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

For Sale, Kenwood TS-870S S/N: 90200062, this rig is 10 months old and the latest manufacturing run of the TS-870S's. This rig has the DRU-3 digital recording unit installed a $125 option, which allows you to record 4 different 14 second voice transmissions for calling CQ, sending

your exchange or whatever. This rig is in excellent shape and is a 10 both electrically and cosmetically. I have all original boxes, manuals and documents, hand mic, software, power cord, and software manual for PC control of rig. Price is $1750 shipping included, FedEx COD.

For Sale, Kenwood TS-570D(G) S/N: 90400289, this rig was a late production TS-570D that has been upgraded to the TS-570D(G) model through Kenwood Service Center East at Virginia Beach, VA. I also have installed a IRAD 400 Hz CW filter which does a very nice job, better than Kenwood filter, this filter was $100 new. This rig is a 9 cosmetically and a perfect 10 electrically and still under full warranty

for both the original rig and the upgrade, I have documentation for this. For this rig I have all the original boxes, manuals, receipts/documents RE: G upgrade done 4 weeks ago, hand mic, software for PC control, and power cord. Price is $1000 shipping included, FedEx COD.

Please contact me via email, I will be happy to meet you on the air to hear the rigs or talk with you on the telephone.

Thanks es 73,

David E. Shelton, W4DES

i have a ts570dg love the rigs operation and its features especially the dsp noise reduction
operation, i am a cw man so i purchased the optional 500 khz filter to do away with the
agc pumping that happens when using the audio filtering and you have strong sigs a few
khz above or below you... antenna tuner works great.. comparing the rx to the ic706 mk
2 i used to have pretty close race but the kenwoods does win on hf especially on the 40
and 75 meter bands.. buy one you wont be sorry

Submarine communications and navigational beacons are also located
"down under" the AM BC band. There is also a U.S. Navy Time standard
broadcast down around 21kHz.

Some of this stuff is below 150kHz, so a "full range" receiver (down
to about 10kHz is required for some of this. Also, you can pick up FM
SCA signals with the help of an FM tuner and a receiver that can tune
67kHz in the FM mode.

4031. FS: Kenwood TR-9000 2M All-Mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: prografx@teleport.com
Message-ID: <5kfc2.1137$9n4.636019@news.teleport.com>
Source record: 123394

I have a Kenwood TR-9000 2-meter all-mode mobile (12 Vdc) for sale.

This radio has 5 memories and 10 watts of output power. It covers 144-148 MHz in FM and SSB modes. It features red LED readout and a back-lit analog Signal & RF meter. It has been modified to provide memory channel and VFO scanning. IT does NOT have CTCSS tone encoding or decoding.

The radio comes with Kenwood Touch-Tone mobile microphone, memory backup power supply, power cable, Owner's Manual and Service Manual.

The case has been painted to cover scratches, but the radio itself is in good shape and properly operates in all modes. This radio does not have a mobile bracket, and has rubber feet installed on it as it was used as a base.

I am only selling it because it is my "spare" and it is not trypically in use. I am asking $225 plus shipping.

Steve

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-11 00:00:00 UTC
From: wharrell@surfsouth.com
Message-ID: <367c9220.90575180@news1.newscene.com>
Source record: 123396

New Amateur Radio Search Engine online......

There is now a dedicated Amateur Radio Search Engine for amateur operaters. It is located at http://www.surfsouth.com/~wharrell/fest

This is the Sunbelt Hamfest site and has the link to the new search engine. As the database grows it will help Amateur Operators locate Amateur relate sites easier.

Sell that surplus gear during the holidays and have more for Christmas. Send your listing to wharrell@surfsouth.com and put in Subject: Hamfest Listing

We look forward to your emails and invite you to post your page in the Search Engine.

The hamfest boneyard listing is free.

Wayne

Really boring people are actually quite rare. You should maybe take a Dale Carengie course to find out how to talk to people so they don't appear boring to you.

>friday night. you should go out and get some fresh air.

Kinda funny...I was up rather late-ish last night listening to the ham bands on my newish toy (a newly acquired ATS-803--thank you very much, WA8X, you're quite a saint for having sold it to me and being patient with the questions an' all).

I heard several folks calling CQ on both 80 and 40 meters at around 0800 UTC. On the internal whip antenna, at that...on CW. (No, I don't have an RCA adaptor soldered to the old longwire yet. :)

I also heard a number of folks calling CQ and holding nets about the same time on USB, too. Not half bad for "ham radio declining". :)

(And yes, I can now understand what folks say about the DX-440/ATS-803 having had better sound than the DX-390/ATS-818. :) One can actually adjust bass to where the radio sounds warm. :)

Greetings to all,

A friend of mine has a Yaesu FT-208R that is in perfect working condition, but he is unable to use it as most of our local 2M repeaters have gone to tone encoding.

He is looking for a tone mod to install in this rig.

Can anyone help?

Thanks in advance.

I think you're giving the 50 a bad rap. I have a 50 that I carry almost every day. So far, I've carried it for over 2 years through any weather (lots of rain). The 50 has never skipped a beat. The original 3-year-old 5 watt battery pak still performs quite well (prob 80%). The FT50 has some of the best wideband receive of any handheld. Older FT50s had even better wideband (no gaps). The audio output rivals Motorola Sabers. The antenna's probably 8 inches and the radio about 7. The only real known problem is the voice-mail system- it won't play back the right thing, but it's useless even if it did work. Furthermore, it encodes and decodes both CTCSS and DCS. DCS isn't possible on many radios- even the 580. I love my FT50 and would probably kill anyone who tried to take it from me. The display is very clear from all angles (unless you want to talk about 91-180 degrees ;-) You can set the radio to 5, 2.5, 1, and 0.1 watts with the FNB-41 5Watt 9.6VDC pack, and approx. 2.5, 1.5, 1, and 0.1 with the 2.5Watt pack. Furthermore, if you go pull the diode to get to the service menu, you can use a wattmeter and adjust the above settings to anything you want. Granted, the radio won't crossband, and it can't dual in-band receive- but how important are those features to you? Furthermore, my 50 tx's 120-250MHz and 350-520MHz- SWR and power out aren't great (down to about .5 watts at high on both edges) but that's not too shabby for what it is. The radio is also very small- much smaller than any other radios mentioned- the smallest radio in it's performance class. Also, the 50 was the first milspecced radio- which at least the 530, 580, the 51 I think, and probably the W2A. The W2 is supposed to be pathetic- low power out as well as many problems. The 580 has only 20 memory channels and no alpha, while the 50 has 100 with alpha. The 50 can scan at +30cps. The only comparator to the 50 is the G7A Kenwood.

Just my $0.04 ;-)

Terry

Very correct, Greg. The original post is NOT Robert Cruz, rather
a "gentleman" who goes by the moniker of smokingun20@my-dejanews.com
He has a hardon for Robert and has created a group of "cyber-people"
to discredit Robert, even to the point of spoofing Roberts own email
address and making threats to kill. This has been going on for some
time on rec.radio.swap. The thing is, as Greg pointed out, the syntax
of the messages are the same,even up to recurring typos.
Bottom line is: Robert Cruz didn't write the original post. He is the
victim of a slanderous attack campaign by one person.

For Sale, Hamtronics R-139 Weather Satellite (polar orbiting APT) receiver. Built from kit, professionally aligned. All crystals installed. Very sensitive receiver. Works nicely with the German WXSAT program and any computer that has a good Sound Blaster 16 compatible sound card for decode.

Reason for selling - Moved to location where I can't put up a decent antenna and unable to get reliable pix - too many power lines too close to the house.

$110.00 or best offer. At 110 bucks I pay shipping, anything less and you pay shipping. W0EB email to w0eb@feist.com

If you are using NT you have to go to the
control panel,
ports,
com1, (or com2, whichever you are using)
advanced,
Make sure FIFO enabled is not checked.

I don't know if this is needed on windows 95, or 98, but you cannot
put anything into an FT50 with it checked. It appears to start the
download, but pops up with an error after a while.

If this isn't the problem, maybe some more detailed description of
what you are doing would help.

Another alternative is to find an old tv tuner/timer unit that went along
with the old video cameras. The units are VHF/UHF with line level audio outs
and video or rf out.

I've purchased them from the 'Good Will' store for under $5.00 on several
occasions.

I'm currently using one along with an old color video monitor as a makeshift tv
in my workroom.

>>Laughing Policeman Wireless Society
>>Alternative radio society, we put the fun back into amateur radio!
>Just how do you put the fun back into Amateur Radio ???
What I don't think our American friends realise is that the LPWS is a society of jammers, dedicated to ruining other people's legitimate use of the amateur bands. The last time I read their site they were trying to justify jamming repeaters and other amateur frequencies, planting explosive devices and being generally anti-social. I don't call that "putting the fun back" for those on the receiving end of their dangerous pranks.

I guess I picked up on this thread late. I agree that the screwdriver is probably the best antenna, but I think that the performance difference will not be significant except on 75 or perhaps 40m. The texas bugcatcher is also reportedly very good. The bottom line is the bigger the antenna, the better it will work, especially on lower frequencies. on 75m, the best antenna will be 13 feet high!

Most of the guys running 20M mobile for the county hunter net use Hustlers, I have been told. I use the Hustler system and find it quite servicable. I have an IC706 in a Subaru station wagon. The nice thing about the Hustler is that there are no moving parts, nothing to gunk up (I live in the snow belt), and replacement parts are cheap and readily available, like when I broke a whip on a jeep road. The bad news is limited bandwidth on 40m and 75m, and having to get out of the car to change bands. The wind load for the hustler is also modest, at least compared to screwdrivers or bugcatchers. A friend of mine uses the hustler with the "spyder" attachment, so can operate 3 or 4 bands without changing resonators.

4084. Receiver for TV audio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-12 00:00:00 UTC
From: "Richard A. Ferguson" <raferguson@worldnet.att.net>
Message-ID: <3671D848.548@worldnet.att.net>
Source record: 123299

I am looking for a good radio to recieve the audio portions of the
VHF TV channels. Many radios will cover the audio part of
TV channel 6 at the low end of FM band. There are a few radios
that cover TV audio along with FM and AM broadcast.
We bought one, a Sony ICF-34. It was inexpensive, but very prone
to images and interference, and is hard to tune. Does anyone
have a better suggestion? I am not adverse to spending more
money this time. I guess one alternative would be a portable
TV with decent audio, but I don't really want the video.
Another alternative would be to pipe audio from our TV or satellite
TV system via wires or wireless to another room. But I really
would like just a plain radio that works as well as a decent FM radio.
Any suggestions would be appreciated.

I am sorry if this is a bit off-topic, but I have been unable to
locate a more appropriate newsgroup, and this is one that I regularly
read.

4090. FS: KENWOOD 950SDX COMPLETE STATION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-12 00:00:00 UTC
From: n2ss@bellatlantic.net
Message-ID: <3671f57b.31118728@news5.bellatlantic.net>
Source record: 123305

I have a complete Kenwood station for sale:
Kenwood TS-950SDX
SM-230 Monitor Scope
MC-90 Microphone
IF-232C Computer Interface

Only reason I am selling is because I have too many radios. Besides the 950SDX, I have an Icom 781 and an Icom 756. Since I have an Icom amp, the PW-1, I have decided to stay with the Icom exciters. The TS-950SDX is absolute mint, works perfectly and I hate to part with it. I also have the SM-230 Monitor Scope/Spectrum Analyzer. The MC-90 is a dual head microphone and the IF-232C interface. All are in mint condition. I would like to sell the complete package for $3000 but if there is standalone interest in the 950SDX, then I will sell the other items separately. Thanks for Reading. Tony N2SS

The best adaptor for the 398 (and also the 390/392) that us commonly
available is the Radio Shack 273-1663. This adaptor is 3/6V
switchable, it IS regulated, and puts out 700 MA. When connected to my
DX-398 and the radio set for normal listening volume, the ripple is
less than 25 MV.

I've used one of these on my DX-390 for 4 years and just got another
one for the 398. The adaptor costs $19.99 + tax.

>about the Performance. Is it decent ? do you regrete your purchase or are happy
>etc.

I picked up the DX-77T for about the same price last June, and I've
been happy. The only feature I really miss is VOX, and I'll probably
be looking to buy or build an external VOX. It of course doesn't have
all the bells and whistles more expensive rigs have, but it has more
than you would normally expect for a rig this price.

A few things are a little awkward to get to: There's a set of
adjustments you get to by a 'tap the function key, then press and hold
it for 2 seconds' sequence. Most of the adjustments you get to that
way are things that aren't changed often: UP/DOWN frequency steps for
the different modes, whether memories act as VFOs or are
fixed-frequency, scan modes, LCD backlight level, break-in mode, etc.
A few are things you might want more immediate access to: electronic
keyer speed, speech processor on/off, CTCSS tone frequency. Also,
there's a few places where direct key entry would be nice: getting
from, say, memory 2 to memory 50 requires flipping past all of the
intervening memories; changing mode involves flipping forward through
the sequence LSB,USB,CWL,CWU,AM,FM and then back to LSB; direct
frequency entry would be nice as well.

The inclusion of the computer remote control feature means that if
you've got a computer within reach of the rig you can, with a bit of
software, create your own interface to get around any of these things
you find annoying. That's exactly what I'm planning: a little
application that displays a window of widgets that do things I'd like
to do more directly with the DX-77T.

I'm currently satisfied with the DX-77T's performance. The DX-77T plus
a 110' ladder-line fed doublet up 15 to 40 feet(depending on how you
measure over sloping ground with the wire in a 'drunken inverted vee'
configuration) netted me 407 Qs and a clean sweep in this year's phone
November Sweepstakes. While this isn't a serious contester's radio, I
did find the delta-IF helpful in dealing with the crowding you
typically find during sweepstakes.

The only question I have, performance-wise, is use for packet and RTTY,
but that may just be operator error. I hooked up my MFJ-1278 soon
after I got the DX-77T, and seemed to have trouble receiving well.

However, I tended to leave the noise blanker on all the time(not a good idea, the noise blanker appears to introduce some flat-topping in the presence of strong signals) when I first got it, and that probably introduced some distortion.

If you're an ARRL member, you'll want to go over to the members-only section of the ARRL web pages, and read the QST review from last June. I pretty well agree with it - if you're looking for a first HF rig, an upgrade from an empty-state rig, or a second transceiver, the DX-77T makes a pretty good choice at it's normal price range of ~$1000. At ~$650, it's a bargain.

Ben

Cross-posted to: alt.radio.digital,rec.radio.amateur.equipment,rec.radio.swap,uk.radio.amateur

RA1792 with full complement of filters I have two and I need to sell one (to upgrade my computer). £850.00 buyer collects. I do not wish to ship unless it is to the US and and then FEDEX is on top (about £120)

I am an ex. Racal Engineer so I know the RX well.
I have replaced the displays (the early ones tended to fail about now)
Fully aligned the Rx (not that they need much). Both more than meet
original specs.

Specs as follows:

Filters:

16, 6, 3, 1, and 0.3 kHz CW/AM/FM 2.7Khz usb/lsb no isb

OR

2.0, 1.6, 1.0, 0.3, and 0.1Khz CW/AM/FM 2.7Khz usb - no lsb enabled on
EPROM or isb fitted. This is a great data/CW radio

E-mail me back at mike.b.gibson@btinternet.com or phone me on 01494 816342

regards all and have a happy Christmas

Mike Gibson

4113. Auction: Seven Hand Microphones

I have a lot of seven hand microphones on eBay. No reserve.

This is a lot of seven (7) hand microphones as follows: (3) Shure 104A one with noise cancelling case; (1) Shure 488B with noise cancelling case; (1) Electro Voice 600E; (1) Shure 404C; (1) Mystery Turner. These were in a box labeled "good mikes" but I haven't personally tested each one, so I'm selling them "as is". I tried the 488B and it worked fine. Bidding curently at $7.

URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=47812330

Closes 12/14/98 at 19:23:37 PST.

Thank-you.

From: Mickey Baker <mbaker@nospam-sageresearch.net>
Message-ID: <74u5fb$gc8$1@camel25.mindspring.com>
Source record: 123330

I asked in message <74n1p8nfo1@camel25.mindspring.com>...
>If so, which tuner and antenna combination are you using?
>
>Are there any web resources for mobile HF?

Again, thanks to everyone who's replied.

Since my installation vehicle is large (suburban) and I don't know what bands I'll be using as yet (20 -10m most likely), I chose the High Sierra HS1500 and have it on order. I'm installing the '706 this weekend - mounting and power - and the antennas will come next weekend so I can have this thing running before Christmas.

The HS-1500 seems to be made fairly corrosion-proof and they make some spiffy mounts to attach to an SUV.

The FT50 is basically an old technology piece of dung. The FT 530, its predicessor is far, far superior. With the FT50, you cannot crossband repeat, no dual in band receive and its one of the worst for intermod. The FT51 is better. Better models by far are: FT 530, FT 51, ICOM IC W2A, Alinco DJ 580 (a real versatile workhorse) and their new DJ G5 TH is great and has less intermod than most. All things considered, stay away from the FT50, its technology is 15 years old. Once you've used dual in band receive, you'll never be without it. You can listen to one repeater or simplex frequency on one side and scan the rest of 2 meters on the other side at the same time. But no can do on the FT50.

Well, after another deal fell through, I have a box of tubes to sell. I'm unsure of their worth.

1 GE 17JB6A
1 GE 1G3GTA/1B3GT
2 RCA 10JT8
2 RCA 12BE6
1 RCA 15KY8A
1 RCA 2ILU8
1 RCA 42KN6
1 RCA 5814A
2 RCA 5JL6
1 RCA 5U4GB
1 RCA 6AY3B
1 RCA 6EH7/EF183
1 RCA 6EJ7/EF184
1 RCA 6GE5
1 RCA 6GH8A
1 RCA 6GJ7/ECF801
1 RCA 6HM5/6HA5
2 RCA 6JT8
1 RCA 6JZ8
1 RCA 6U8A/6KD8
1 Realistic GoldClad 17JB6A
1 Realistic GoldClad 6GK6
1 Realistic GoldClad 6LT8
1 Sylvania 3A3B
1 Westinghouse 1G3GT/1B3GT

I would like to sell the whole box, but would consider splitting.
E-mail with best offer- TVSJR@SPRYNET.COM

If you reply to the ng, I may not receive- my ISP's news server has been really bad about "losing" things lately.

Thanks!
Terry

Oris & Gary -

Anything posted from a dejanews account is suspect in terms of origination. It is fairly trivial to forge addresses originating from dejanews.

I don't know the parties involved in this mess but I don't like the destruction of the newsgroup.

From reading postive comments from other customers, Robert's earlier posts, (content, language, grammar, structure), plus some network observations here by another party, it is highly likely the trash messages seen in the last few days are forgeries.

This may be old news already, but the ICOM IC-R2 Wide-Band, mini scanner radio is now available in the U.S.! Check with your local dealers, or mail-order houses.

I picked on up, this is a very impressive radio, in an extremely small package!

Channels 70 thru 83 were reallocated some time ago on a shared basis with Land Mobile communications (mainly Public Safety).

I'm not sure of the current status, but certainly not exclusive to television.

Al - K8EUR

-> Channels 14 and up start at 475.75 MHz and go up in steps of 6 MHz, at least
-> through channel 69 at 805.75 MHz. Oddly, my book says nothing about the
-> rest of the UHF channels.
->
-> Good hunting!

Hi, I'm looking to trade a Uniden SMH1525DT mobile for a HT1000/P1225 UHF/VHF or a similar radio with a minumum of 8 channels. This is a VHF unit with a 150-174 split. The power output is 25 watts. This is programmable compact unit. It has leds for channels, scan and mon. It includes a power cord, mic, mounting brackets but no screws. Visit Uniden at http://www.prc.uniden.com/htm/products_con_SMH1525DT_main.htm Can use http://www.iescrow.com for this trade or however you may want to do it. Please e-mail me, thanks!

I think you hit the nail on the head...

"Nocturnal emmisions"...or "Vaporware"
or just plain marketing strategy ! !
Whatever the case, they should weigh the
frustration factor against the possible held-off
competitor sales and decide if perhaps it would
be wiser to do a sales blitz the moment something
becomes available instead.
It'll be a year in the spring since Yahoo
anounced the FT-100.

I called a nationally recognized large Ham dealer and asked if I could trade my FT-1000D for an Icom 775DSP, thinking newer equals better, right? To my surprise, the salesman talked me out of it! He said as far as he and the other salespeople were concerned, there was nothing on the market that was better than my 1000D. I was surprised because they would have made money on my trade and on the Icom. I have used lots of radios including most of the big three and TenTec. The FT-1000D is the best...so far.

4157. ****WTB: LOW POWER FM XMTR (PLL ONLY)****

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-13 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19981212234930.10200.00005384@ng17.aol.com>
Source record: 123147

Hi, I'm looking to buy a low power FM transmitter. I am looking for a unit which is PLL controlled and the frequency being set by something like DIP switches (no $35 type tunable one's please). Something like a Ramsey FM-25 would be excellent, but anything of that type is good too. Please email me if you have such a unit for sale, with your asking price. I also have some items I'm willing to trade (scanner, several CBs, etc.) but am willing to pay cash.

Thanks

Source record: 123151

Hi Terry,
It's rather simple:
-disconnect batt./ant.
-remove screws
-carefully open the radio(flex cable!!!)
-find blue jumper(not so far from PTT)
-cut jumper
-reset the radio(F+Pwr on)
-done!
73 de Igor UN7GM
P.S. You can do the same with software&interface. Need URL? Let me know and send your E-mail.

Hey folks,

I have started a website and ISP strictly for ham operators. The idea is to get hams to help keep up a website with information updated weekly and monthly. I would like to have all the cool stuff you find on the net in one website. News, mailing lists, callsign database, if its cool I want to put it on there.

I could use someone to help keep up all different parts of the hamsnet site. Is there anyone interested in keeping up a section of the site for equipment swapping and sales of used equipment?
reply to: kc5gjn@hamsnet.net

I am also offering free e-mail addresses and web services for all ham operators.

Please go check out the site and get your free e-mail account
http://www.hamsnet.net

Thanks for your help

Message-ID: <367385CF.2887@xtra.co.nz>
Source record: 123160

Hi, you are not the last one , I like them and now have two. They
outperform the later models on rec. esp. SSB characteristics. I dont know
if u want mods for SSB as they are only info I know and it was printed in
VHF communications mag (Germany) issue 2/ 1982.
The mod which improves adjacent noise sideband problems by 10 db is best
acomplished by adding a small choke 1.5mm dia 10mm long ferrite rod
wound with 1 layer of enammeled wire, across R 1 which is the resistor
supplying the tuning volts to the varicap diode. This mod fixes the problem
that Icom factory fixed with a resistor/cap in the source lead of the Feta
and you need not do this mod if you put in the choke. The choke prevents the
varicap being noise modulated by the oscillator itself by fixing the VCO
volts solid from the PLL.
You have to remove the VCO lid to do this and glue or hotwax the choke
across the R1 47K resistor (for microphonic stability)
The article has other refinements in this area but I had trouble with them.
Other comments : IC 245 and IC 211 had trouble with dry joints - plated
thru holes you need to resolder if suspect and R4 the 4 ohm resistor up
behind the FT panel goes hi res and dull display results.
Hope all goes fine!
73, Ralph ZL1TBG (replace preamble with callsign for email)

Source record: 123168

Hi there,
I need info about the frg-1000..
First what do you need to connect it to the computer, at the back I have a CAT socket, is it what you using? Do you need an interface (which one, is it expensive?) or do you only have to buy the proper lead (what spec. or name) and plug it directly to the pc? I've seen very cheap demodulator which plug from the RX line out to the PC port is it good?
Also can you change the bandwidth in ssb (I heard there is 2 settings to get better sensibility)?
I just bought the frg-100 as second hand with no manual and it looks like a terrific receiver..Also I'm stuck with the memory and can only get 7 of them (the 7 I entered a freq) i can't access anymore the 50..
I also have a slight alimentation noise (i'm using the yaesu one which come with the rx), especially with a headphone and the volume down to none, do you have that same problem..

4183. Motorola - Big Profits for Human Life

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-13 00:00:00 UTC

http://www.worldnetdaily.com/bluesky_smith/19981208_xcsof_motorola_c.shtml

China has begun a new round of imprisoning dissidents. The enforcer of the brutal Red policy of oppression and murder is the People's Armed Police. Ironically, Chinese police orders to arrest, torture and kill are being given out over radios made in the USA.

In November 1994, Motorola employee and former Clinton White House National Security Council member Richard Barth began his successful effort to sell encrypted (secure) radios and cellular phones to the Chinese People's Armed Police.

According to Barth, a high-tech trade war had erupted between the U.S. and Britain. Motorola's Barth wrote to Theodore McNamara, assistant secretary of state Nov. 23, 1994. According to Barth's letter, Motorola had the approval of the National Security Agency and President Clinton to sell high-tech communications directly to the Red police.

"European firms," wrote Barth, "including Nokia, Ericsson, Alcatel and Siemens, have for a number of months been able to market and sell GSM cellular systems with A5-2 encryption in China as a result of a decision taken by the UK intelligence agency, GCHQ."

"This is to request that your office initiate action to obtain a waiver from requirement for individual export license notifications to Congress for wireless mobile communications systems containing encryption for China. Such a waiver was issued by the president in September of this year for civilian satellite systems and encrypted products for use by American firms operating in China."

McNamara immediately replied to Barth, noting the State Department had other concerns.

"As you know, there are important issues that must be considered carefully, in light of the post-Tiananmen sanctions," he wrote. "The president recently renewed the administration's commitment to these sanctions when he de-linked MFN and human rights issues. ... Government policies regarding exports of U.S. Munitions List items are covered by these Congressionally mandated sanctions."

The State Department objected to the Motorola sale to the Chinese police for diplomatic reasons. After all, the linking of human rights and high-tech exports dated back to Roosevelt policy on Nazi Germany in the 1930s and continued right through the war against apartheid in South Africa during the 1980s.

The State Department had good reason to distrust the Red Gestapo with advanced U.S. technology. The Chinese police run the "Lao Gai" prison camps -- slave

labor factories where beating, torture and starvation are a matter of policy. The Red Gestapo is funded by slave labor factory products produced in the Lao Gai slave labor camps.

The Chinese police execute dissidents -- they are the Red sword of "justice" against anyone opposing the party. The most gruesome PAP policy is to sell the organs of executed prisoners for hard cash. Some of those executed were guilty of no more than speaking out against the Communists.

According to congressional testimony, PAP officers drag pregnant women out of their homes and take them to forced abortion clinics. No license -- no baby. Many women are also forcibly sterilized as part of China's one-child-per-couple program. The State Department knows this and so does Congress. It is the stuff equal to Nazi war crimes.

However, delays in U.S. government approval because of murdering dissidents and violating human rights go against the Motorola corporate bottom line. Human rights are an expense, a cost that threatened to kill a lucrative Chinese export deal for Motorola.

By early 1995, Motorola was quickly growing impatient with the delay over human rights and their proposed sale to Red China. In February 1995, Motorola's CEO, Gary Tooker, wrote Ron Brown an angry letter detailing his objections.

According to Tooker, Brown needed to "Delegate to the export control officer appropriate authority for reviewing certain classes of controls, e.g., encryption. ... Export controls administered by the State Department at the behest of the National Security Agency (NSA) should NOT be referred for endless delay to the human rights bureau and myriad others in State."

Motorola applied more pressure against the diplomats at State in another 1995 Motorola document, a fax letter from Richard Barth which was cc'd to various players such as current CIA Director George Tenet, who was then inside the White House National Security Council.

Barth wrote to his White House, and Commerce friends, "Please forgive the informality of this note, but I want to move the process along here and not stand on formalities. We currently have about $100 million worth of two-way radio business tied up by the lack of a waiver for China. ... I urge you to get in writing to the State Department asap language that seeks a waiver for 'cellular, PCS and two way radio systems,' as recently agreed."

Finally, in July 1995, Motorola got the waiver. Clinton overrode the objections of his diplomats and OK'd the export with his signature. Tooker, wrote a personal note to Ron Brown, expressing his gratitude for Clinton's signature.

"Dear Ron," wrote Tooker to Brown. "I am writing to thank you and some key members of the Commerce Department for your assistance in obtaining the presidential waiver for encryption export sales to China."

Motorola's sale to the Red police came at a very high cost. During a 1998 interview, Chinese dissident Harry Wu told of his failed attempt to enter China through the remote border with Kazakhstan. Wu was quickly identified by the

Chinese State Security and arrested by the People's Armed Police. After his arrest, the PAP officers escorted him to prison, taking their orders over brand new Motorola encrypted radios.

Wu's observation on Motorola equipped PAP officers is backed up by Democrat Rep. Nancy Pelosi from California. She too was roughed up by PAP thugs in Beijing along with her husband while trying to meet Chinese dissidents. According to Pelosi, the PAP officers took their orders over Motorola radios.

Motorola's Barth, rightly, asserted that perhaps the Europeans could have sold a similar system to the Chinese police. That may be true but Motorola is not thy brother's keeper. Motorola is a soulless corporation with a cash bottom line.

Motorola made the sale to the Red Gestapo, a sure sign of strong customer product support. Nokia, Ericsson, Alcatel and Siemens lost out. Why not brag about it? Why not tell the whole world? Why does Motorola want to cover it all up?

Would you brag about a deal with the Devil?

Clearly, if the Chinese Police need more Motorola equipment all they have to do is cut-up another dissident. No one will ask where the money came from.

Do nine out of 10 murdering Red Gestapo agents prefer Motorola over the next leading brand? Maybe not. There is, however, considerable documentation that Motorola and Bill Clinton tried very hard to make it at least eight out of 10.

Hello,
yesterday we checked the first pcs. of VC 1 and found a lot of batteries "golig" into the VC 1 . With camera switched on we had just 30 min. with 4 pcs of AA size batteries. With the Nicads in AA size 1400mAH we could also not work so long because voltage was below 6V.
Does anybody elso has any impressions?????

If your near Taunton in Somerset UK I'm giving away items which only gather dust, nothing special but here it is:

2 x 2m fold over mobile whips, both are SO 239's 1 is I believe 7/8 over 5/8 the other 5/8 over 5/8, someone's going to tell me they can't be but I can't remember what they are.
1 x 70cm fold over mobile whip 7/8 over 7/8, SO 239.
1 On glass type scanner antenna 112/1200mhz, complete and un-opened, about 2 years old (Maplin RU 76).
1 G-whip HF mobile whip with sliding switch, it's either 15/30 or 10/20 mhz (something like that) with ball mount/cable and gutter mount.
1 Microwave modules MMA 144V low noise preamp, 15 db gain rf sensing for tx, with instructions.
1 Hansen 144/430 200 watt SWR meter with N connections, still with original box.

All are in good working order, most haven't been used for about 5 years, maybe longer.

That's it for today.

From: Brett <bduane@primenet.com>
Message-ID: <3673FBDB.89095DCD@primenet.com>
Source record: 123183

A couple of months ago, my car was broken into, and the touch tone mike was taken. Now I'm looking to hack another mike to replace it. The Alinco EMS-45 has all the buttons my old mike had, and I like the feel.

I'd like to know a few things about what's inside. At the top of the list: Do DTMF tones get generated in the mike and output on the TX audio line?

Everything else is 'hackable'.

Thanks for your help.

It's not cheap, but an Icom IC-R10 can do it with no difficulty. It is a pretty neat communications receiver, covering 500 KHz through 1300 MHz with no gaps except for the cell phone frequencies, and all modes are supported: AM, LSB, USB, NBFM, WBFM, CW.

It has 10 banks of 100 channels each, for a total of 1000 channels. You could program in all of the VHF and UHF TV channels and still have a ton of empty channels left over for other stuff. The only hang-up here is you have to know the frequencies that correspond to each of the channels, which can be found in many publications, including many "scanner guides" including those readily available from Radio Shack.

They cost around $500 brand new, but I found a used one at my local radio retailer in perfect shape for half that! I couldn't resist.

If you really need only the VHF TV channels, here are the frequencies. You could then compare them to the coverage provided by the various scanners out there that are a whole lot cheaper than the IC-R10. . .

Channel	Frequency
02	59.75 MHz
03	65.75
04	71.75
05	81.75
06	87.75
07	179.75
08	185.75
09	191.75
10	197.75
11	203.75
12	209.75
13	215.75

Channels 14 and up start at 475.75 MHz and go up in steps of 6 MHz, at least through channel 69 at 805.75 MHz. Oddly, my book says nothing about the rest of the UHF channels.

Good hunting!
John (KB0ZEV)

4217. Re: WTB: Yaesu FT-208 Tone Board

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-13 00:00:00 UTC
From: dinoal7lz@aol.com
Message-ID: <19981212215835.21482.00002417@ng-ch1.aol.com>
Source record: 123242

Communications Specialists makes a tone encoder board for the 208--I put on in my radio recently. It's their model SSY-32; not too difficult to do the mod but you have to do some surgery on the case to allow access to the dip switches that control which tone you enable. The real problem with this method is that it is difficult to change those switches and you'd have to do that each time you changed repeaters that required a new tone. I'm not sure what the origianl Yaesu board was all about, but I believe it was very simlar (if not the same) as the CS product. May be better off just getting a new handheld with CTCSS built in--the CS encoder is about $40 - $50 as I recall.

Good luck!

Dino KL0S/4

Hi, I'm looking to buy a low power FM transmitter. I am looking for a unit which is PLL controlled and the frequency being set by something like DIP switches (no $35 type tunable one's please). Something like a Ramsey FM-25 would be excellent, but anything of that type is good too. Please email me if you have such a unit for sale, with your asking price. I also have some items I'm willing to trade (scanner, several CBs, etc.) but am willing to pay cash.

Thanks

I have had similar experiences. I purchased the ADMS software and couldn't make it work. I use the same computer to program other radios, but couldn't meke the adms go. After several long distance calls the guy tells me there is a problem with my computer and I need to contact Toshiba. I found this out to be B.S. 6 months later I call back and talk to someone else, he tells me within 2 minutes I have a bad cable and I sent it back an got a new one. no problems since.

4234. Info and Opinions on IC-T8A & HF rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: Wayland Adams <phantomx@integrityonline5.com>
Message-ID: <3675a8b4.0@205.238.18.7>
Source record: 123009

Hello
My brother who is studying to become a Ham like us. Is looking at the Icom IC-T8A Tri band HT. It looks pretty good to me. But the 6 meter side is a little fuzzy to me. It looks like it can only TX: 50-52MHz. And I don't know which mode that is in(FM, SSB, etc)
Does anybody have info, or opionions about this radio. Good or bad.
Also I'm looking at getting an HF rig. I really can't afford a big rig. But I do want it to have all the bands and modes. Does any body have any segestions as to which radios look good. I have been looking at the Icom 707 and the Kenwood. 50S.
Thanks alot

Hi Guys,
Just received a Timewave DSP-599ZX as an early Christmas present since I am recuping from back surgery. Man, it is unbelievable! I have only been playing with it for a couple of days and it is absolutely amazing. I found two stations that were not too far apart on 10m CW band and could adjust the DSP to make either one readable. When the band was so noisey that I could not make out the QSO that I could hear, I could reduce the noise enough to make the QSO readable. I am not saying it was a 59 but enough that you could understand the people when there was no reading on the S-meter. I am sold on it. 73 de N3WJA

Hey,

I'd like to obtain a schematic for an old Halicrafters S38A short wave reciever; it's a pretty neat old radio. Unfortunately the previous owner really trashed some sections of the circuit, but I'd like to restore it. Any help in this regard would be most appreciated.

Thanks!

for some Motarola radios to put them on the ham bands. Anyone know where
to get some at a good price ?

4244. CTCSS Decode (FTS-22) in FT8100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ncal.verio.com>
Message-ID: <3675DC07.F10CAD5B@ncal.verio.com>
Source record: 123019

Anyone installed an FTS-22 CTCSS decoder board in a FT-8100?

I pulled the board from my now defunct FT-5200. The manual for the 8100 says to stick the board in the blank space designated. But the space they show in the manual is not a blank space in the radio - it has SMDs on it. The 5200 had a "blank" spot for the board - no components.

Are your really supposed to foam-back-tape the FTS-22 to the SMDs on the radio's "motherboard"?

Not glued down, just a double-sided felt washer to keep it from moving
around. Just pull it up, it won't hurt anything...

Message-ID: <mhiybAA64Kd2Ewvc@northop.demon.co.uk>
Source record: 123052

Hello all,
I'm trying to improve the transmit audio from my IC706 MkII.
I've posted to the group a couple of times for opinions of the SM8 vs SM20 microphones but did not get any reply :-(

Now I've recently been told that the Astatic D104 is a 'classic' way of improving TX audio. Having looked at the web site I must say that I like the 'BBC Announcer' look of them - my daughters tell me they are "well retro" - but does anyone out there have any experience of using them?

PS Would I have to wear a winged collar when using it ;-)

Hopefully,

Eric

From: cslc82@email.mot.com
Message-ID: <3675afd3.187654342@netnews.worldnet.att.net>
Source record: 123053

As a communications quality mic, the D104 will provide an improvement over many "stock" mic's that come with today's rigs, especially handheld mics. It tends to emphasize the highs a bit, but still provides a decent balance of lows and mids (much better sounbding, in my opinion, than Heils, which really favor the high end. Much of this is a matter of personal preference...in my opinion the D104 is pretty good sounding for an easily available/economical mic. They may not be the best for busting a pileup, for for general communications, they're hard to beat. Another nice sounding mic (which boosts mid/low range more) is the EV664...no longer in production, they're a bit harder to find, and are more costly. Depending on the rig, you may need to use a preamp, altho I am able to use my stock (old) D104 with an IC706 with good results. Good luck!

hello my name is john and i live in holland .
I'am swl-station near the coast of holland, and i have the following problem
with my ar-3030.

Whan i want too use the scan -mode, nothing happens only an error beep
sounds.
I have programmed a several channels and that must be enough for scanning.
Is there someone who know this problem????

All the other functions works good....
The ar-3030 on this site has the two optional converters inside..

if you know the answer.....thanks a lot!!!!!!!

bye bye and good listening

The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed as a WWW Page:

http://people.ne.mediaone.net/wd1v/hamradio.faq.html

Please direct any submissions, feedback, or administrivia regarding the FAQ to wd1v@amsat.org

73,

John D. Seney, WD1V LeCroy Sales Engineer

Want to buy or trade for Ameritron AL 1200 amp....decent condition and good tube are the main factors....or will trade towards for any of my current for sale gear which can be see here::::::::: Murray's Radio Ranch: Buy Sell Trade Swap Amateur Radio (Ham Radio) Equipment Even , UP, or Down...take your pick...Thanks Murray

4263. Re: Kenwood TS130S,TS530SP Opinions Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: ki3b@delanet.com
Message-ID: <752o1r$j14$1@nnrp1.dejanews.com>
Source record: 123060

Mainly these are older rigs, about 20 years or more.

Good points:

Fairly popular, well built, good rigs for home or portable. Operate all the current ham bands

Bad Points

a) Older, so most parts and/or service may not be available from Kenwood

b) Ham bands only, no SWL (except on 40 meters at night :))

c) TS-530 uses hybrid circuit with tubes in final.

Both are worth somewhere in the $300 - 350 range. Get the book with these rigs, most were shipped without the WARC band transmit mod being done (normally snipping a wire)

Good Luck,

Joe KI3B

The Yaesu FT-100 has be approved by the Federal Communications commision since at least November. This indicates to me that they have working units.

I too am frustrated by Yaesu's Marketing hype. To show good faith, they should at least tell the public the suggested retail price to show they are not waiting for ICOM to release the price for the new 706.

4273. Need programming help with DSP-2232.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: Rob Kling <rkling@home.com>
Message-ID: <36750998.B6379E2B@home.com>
Source record: 123070

Below is the message I sent to TimeWave tech support. If any one in this group can help I would greatly appreciate it. Thank-you in advance

Rob Kling

TimeWave Technical Support,

I am looking for programming information for the DSP-2232, like uploading a modem into the RAM. More specifically how to create such a modem. The source code for the PROMS would probably work. I would be willing to sign a non-disclosure statement. I have a fast connection to the internet so any electronic information is desired. You do not have to selective when it comes to content, I am fairly able to wade through technical material. Or if you have some publications that you have been working on that may or may not be complete I would like those too. If you have some formal publications that you charge for please let me know how to order those. I am looking for anything!

Rob Kling

4281. Motorola mics for Icom

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: Igor Dobrokhotov <icho@softhome.net>
Message-ID: <753bk9jgc3@mail.nursat.net>
Source record: 123078

Hi All,
3 weeks ago I've send this info to Icom reflector(QTH.NET). Only one ham was interested
of this. But, I hope, now he enjoy the fine works of mic(like me!)
May be here this info would be more successfully

When I purchased my IC-756, I found what its equalizer work not so well as I want and PTT clicks very sound.
Then I try to replace ICOM mic(HM-36?) to MOTOROLA standard mic(it has internal preamplifier) from Radius GM-300 Mobile radio.
The result was amazing! Now I really hear the WORK of equalizer and smooth PTT.
Part number of MOTOROLA mics is: std mic - HMN3596A, compact palm mic - HMN1056D,
and if you want to use stand mic - HMN3000A. You can get all kind of mics from any MOTOROLA dealers. My local ham friends try to use MOTOROLA mics with other ICOM TRXs like 706&746 with the same good results. I suppose, what the trick may be used with other rigs, where also present electret mics.
All you need - replace 8 pin jack to 8 pin round female connector like on other TRXs.
For IC-706- only reconnect wires inside the mic.
Only 3 wires from mic is using - red(mic audio), green(PTT line) and black(mic ground), its connects to pin 1,5,7of 8 pins female connector respectively.
Please, send any questions and comments to my E-mail: icho@softhome.net

>contestant rather than help.

A lot of contest logs are not submitted. It is a common, accepted practice for someone to make a contest contact with another who is not actively participating in the contest. Sometimes, I get in a contest, and just make a few contacts -- I don't send in a log. Thus, the judges are unable to verify every contact in your log, so don't worry about that - try to work everyone and put them all in the log.

One check that they do use is called a 'check log'. For this they do look for claimed contacts with submitted logs. I.E. if I submitted a log with a contact with W8ABC and they were using W8ABC's log as a check log, then my contact had better in is W8ABC's log. Normally, they only use a few of the submitted logs as check logs.

4286. Re: FCC Database

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: bb840@scn.org
Message-ID: <F3yqE0.56u@scn.org>
Source record: 123083

In a previous article, bujiaj8@aol.com (BUJIAJ8) says:

>I am a new operator. Can someone please e-mail me the url for the FCC Database
>so that I might learn my call sign?
>
>Bill
>
There are several. One that I use the most is www.qrz.com. It updates
daily and frequently has updates before the one on the FCC web page does.

4287. Help with IC735

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: crocifam@jps.NET
Message-ID: <004201be2790$0b01e500$123b8ed1@default>
Source record: 123084

I have an IC735 that works fine on 80 through 20 meters SSB
When Transmitting on 15 or 10 meters and usually after my third or fourth transmission.
there is a slight bubbling or frying egg noise heard by recieving stations on 15 meters
while on 10 meters this bubbling or frying egg sound will overwelm the audio.

When I reduce Mic Gain as low as possible and Reduce RF output to 5 watts or less
the Bubbling sound seems to clear up..
(RF getting back into the Microphome circuitry ?)
,I have tried several different microphones.
(several microphones had WAY to much audio drive)
I double checked the station grounding system, & Antenna system.
I have operated into a dummy load and have been able to
hear the same sound on a monitoring radio.
when transmitting through a monitor scope, I can not see any abnormalities.

The rig was just recently returned from ICOM and they coulld find
nothing wrong with the rig. Help ?? 73 de NI6Z Carl

>> Another alternative would be to pipe audio from our TV or satellite
>> TV system via wires or wireless to another room. But I really
>> would like just a plain radio that works as well as a decent FM radio.
>> Any suggestions would be appreciated.
> Richard Ferguson
>> KA0DXM
>>
>>
>
Another suggestion is to use a old baby monitor system and place it near
your tv/sat setup and relay audio that way, giving you audio. You may want
to go one step further and make a direct audio connection into your system
(be sure to add pads if you plan on input at the mic element, you will need
a pad of about 50db), that way extraneous audio in the room will not be
transmitted.
I use a baby monitor system to relay the tv into the kitchen and garage
areas when I am not watching the tv too intently.
Price was under $8 used. Check the garage sales for baby items

4291. Re: Anyone using IC-706 Mobile HF?

Newsgroup: rec.radio.amateur.equipment

Source record: 123088

Hello Scott,

I simply use a ham stick and the LDG AT-1 with my 706 and my reports are just fine. Obviously, the bigger and taller the ant the better you will do. Cost-wise, however, a simple ham stick, especially if you only operate on one or two bands, is just fine.

Hi all, and thanks for reading this.

There are still a few more DRAKE units I'm looking for until I have them all. You'll find my "Drake Equipment Wanted List" below.

Please feel free to contact me if you have for sale or know of anybody who might have any of the items listed. Thanks for you help to complete my Drake collection!

I have long experience in buying Drake equipment from hams in North-America and Europe.

DRAKE EQUIPMENT WANTED, UPDATED DECEMBER 14, 1998

* 4-LF LOW FREQUENCY CONVERTER
* AN-5 ANTENNA KIT
* DC24 24 VOLT POWER SUPPLY FOR TR4
* DM2350 DIGITAL MULTIMETER
* F-14/U LOW PASS FILTER BUILT FOR THE U.S. ARMY SIGNAL CORPS
* HS-1 HEADSET
* IN-4 DC TO DC INVERTER (NOT THE IN-4B)
* LN-5 "INDUCTUBE" AC POWER LINE FILTER
* MMK-33 MOBILE MOUNTING KIT FOR TR-33C
* MODEL 587 AUDIO BAND PASS FILTER
* MR-3 MARINE RECEIVER
* MRT-55 MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MRT-55C MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MSR-1 MARINE RECEIVER, 19" wide
* R-8000 RECEIVER (19" RACK VERSION OF THE R-8)
* SPEAKER MATCHING SPEAKER FOR THE 1-A RECEIVER
* THETA 550 COMMUNICATION TERMINAL (RECEIVE ONLY)
* TR-V MARINE VHF-TRANSCEIVER
* TV-300-FMT BAND REJECTION FILTER 88-108MHz
* TV-300-10HW HALF-WAVE HARMONIC FILTER
* TV-300-15HW HALF-WAVE HARMONIC FILTER
* UHF-300-HP HIGH PASS FILTER

Season greetings from Norway!

4305. Contesting Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: Seth Miller <seth.miller@NOSPAMworldnet.att.net>
Message-ID: <367460E6.EF898111@NOSPAMworldnet.att.net>
Source record: 123127

Have a quick question concerning contesting, not sure that this is the appropriate group, but I know if I post it on .policy it will somehow be turned into a thread on restructuring before I know it... :)

Question is as follows, sorry if it is rather basic. When participating in a contest, as far as I understand one keeps an electronic log of all contacts, and then submits this log to the appropriate sponsor at the end of the contest for scoring. I presume that this log is checked against other submissions to verify contacts, otherwise an individual could put down just about anything they wanted. Not really much point to that, of course, but I'm sure it happens... thus, I assume, the usual contest rule that entries with too many 'erroneous' contacts will be disqualified. Because of this, I would guess that one should only reply to contesting stations in one is actively participating in the contest themselves and intends to submit a log, otherwise the contact will not be verifiable by the contest authorities and may even hurt the contestant rather than help.

Can someone fill me in a little and confirm that the above is a correct interpretation, or correct me where I'm wrong..?

Thanks in advance -

- Seth N6BMB

I got rid of my Yaesu NC-50 because it would charge only for 5 minutes and then switch to trickle. The charger was used to charge factory Yaesu packs FNB-40 for my FT-50 and FNB-31 packs for my FT-11. The FNB-31 packs always charged properly. The FNB-40 packs never did. I bought dedicated MAHA MH-101 units a few months ago and I have not had a problem with either of them.

The 6146B final is still common and readily available from a number of sources, including RF Parts, A.E.S, Surpluss Sales of Nebraska, and others I don't know of.

A subscription to one of the hobby magazines would probably add to your enjoyment of your ham hobby.

4315. Optimum microphone input voltage for HR-2600?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-14 00:00:00 UTC
From: castles@jps.net
Message-ID: <36746117.0@blushng.jps.net>
Source record: 123137

I tried out my HR-2600 today for the first time on ten meters. The reports said that the modulation was poor. (distortion) It is a replacement microphone. I checked the output and it was about 20 mv p-p with normal volume input. I checked the spec in the operators manual and it says 1 mv for 50% modulation. I measured the input resistance to the HR-2600 and it is 1K. So I made a 5:1 attenuator using the input resistance as the output leg and a 4.7K in the mike. I get much better audio reports now. I would like to confirm the optimum input level for the HR-2600. Thanks, Don W6QEY

4316. Re: High-end HF radio recommendations

I'd like to know who that dealership was. Sounds to me like a very ethical operation!

If you really want to spend your money, have you checked some of the commercial HF equipment manufacturers? I believe Harris, Racal, and Motorola might fall in this catagory, and even SGC makes a pretty good commercial quality HF rig. There are a number of others too.

4328. Alinco DX70TH information

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-15 00:00:00 UTC
From: Raymond Hutchinson <rdhutch@earthlink.net>
Message-ID: <3676F605.7B9B@earthlink.net>
Source record: 122900

Thanks for opening.

I have an Alinco DX70TH that I like quite well, except for one small quirk. The "Multi function" knob,,when used in the memory channel selection, band selection, or fast step VFO mode is sometimes erratic. That is, this control doesn't always give even, consistant steps as I would expect. Has anyone else had this problem, is it a standard quirk of the radio (which I doubt) and what is the fix?

Thanks for any info you might have, wanted to investigate before I send it off to Alinco.

Otherwise the radio is quite good, esp. considering size/price.

I just got a 8100r and noticed inside that the FTS-22 won't go flat.
I don't think putting on top of any smd's would hurt as long as the
FTS-22
is insulated from the main board.

I really don't care to get into this type of posting but I do question
the re.post. This fellow is hiding nothing!!! Read It says We have for
sale. It does state he deals in antennas.
I have put many things on for sale I also am a dealer. I have it
posted as such. The fellow that has the antenna for sale is I'm sure
just trying to make a sale, I would also do the same. I don't deal in
cushcraft so I don't know there pricing but if it is a good price why
not buy the antenna from him. I deal in maxrad and antennex antennas.
I have bought things off this particuler group and also sold and
I feel I met quite a few nice people do to my buying and selling. I
do enjoy this newsgroup.
I am not trying to cause a hardship with the repost but I see the
original post as a business and not a person trying to hide something.I
think it is posted plain as day. Mike....

Greg; From what I can glean from the very brief service bulletin Kenwood offers, the battery appears to be soldered in. As the bulletin also indicates, use must immediately cycle the radio on an off or it will produce an excessive draw, prematurely draining the new battery. If I have the URL correct, you can download a copy of the bulletin at :
FTP://208.197.91.81/e:/kenwood/kenftp/kenwood/Amateur/

I have a very nice Toshiba Laptop for sale (Satellite 100CS). This laptop has seen very little use (I would guess less than 15 hours total). Looks new. Has 504MB hard drive, 8MB EDO RAM, and Color SVGA display. Original boxes and manuals. Has Windows 95 and Microsoft Office Professional on the hard disk.

Asking $450 plus shipping. USPS money order preferred.

Please e-mail if interested.

Don

One of the perks of ARRL Membership is the availability of these reprints at very reasonable prices, Glenn!

Also - if you find yourself needing QST articles from time to time, they're now available on CD-ROM.

You know, I am in the process of purchasing a Vert so I looked at your
add in interest. But, Since you misslead by appearing to be a private
indvidual when you are in fact a dealer makes me wonder if you would
misslead about that what other shady stunts you would pull. If your
commercial come out and say it not pretend you are a private seller.

You almost had a sale,

Not anymore

4367. WTB: HRB-Singer VHF Receiver service manuals etc...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-15 00:00:00 UTC
From: John Scherer <jscherer@pacbell.net>
Message-ID: <H5yd2.6700$RM4.50648@typhoon-sf.snfc21.pbi.net>
Source record: 122973

I have a HRB Singer VHF Receiver, model RI210B (could be R1210B) SN: 91,
that I would like to have service manual, schematics, ANYTHING...

This is a very well build radio, looks like it was military issue but it has
no markings that would indicate this for sure.

Output/Input on the back are as follows:

AM OUT
SDU OUT
PRE-D-OUT
LO-OUT
FM-OUT
AGC OUT
IF OUT
IF IN
RF IN
REF IN --This has a switch to switch from int or ext ref.

It also has a big (1") round Bendix connector with a slide switch that is
some sort of remote control port. The switch switches between monitor and
control modes. When in control mode an LED on the front turns on indicating
remote tuning.

On the front is:

AM Mode Switch log -or- lin
IF Gain / AGC dual gang knobs
AM/FM Switch
AF Gain knob
IF Bandwidth switch (.5, 1.0, and 2.0 MHz)
LED Freq. Display
Signal Level Meter
Tuning Meter
Tuning knob

If you can help let me know. Respond to jscherer@pacbell.net

From: John Dewey <jdewey@tribune.com>
Message-ID: <756b69$2q43@news.tis-in.trb>
Source record: 122975

I used my ts520 SE on rtty and packet for 10 years. On rtty keep power down to 30% of max, or you toast the tube. On packet I ran full bore as packet is bursty.

I modified the switches so I could use the cw filter on ssb, and set the tones of my modems to pass in the cw filter, worked great in the days before cheap dsp.

I hope to pass my general test soon and am going to get my first HF rig. I was wondering what would be the best to get. The upcoming Yaesu FT-100 and Icom IC-706MKIIG both look very good because not only do they include all the HF bands but they get all the good UHF/VHF ones too. Are those rigs comparable to other dedicated HF base-station rigs that cost three times as much? What are some of the best HF rigs?

Source record: 122983

I need help from anyone who have used Kenwood TS930S HF rig.
When I turn the power on, all lights including the digital display comes up,
but no reception. The tuning knob doesn't function either.
If I leave it on for a period of time, which varies from 2 to 20 minutes,
everything comes up.
Some times, switching power on/off several times also does the trick.
I heard that this is a known problem of dry solder in one of the PCBs.
Can anyone help me? Please?
Please email me at: vasan@vcic.com
Thanks in advance.

I love it.

> Do you have any pro and cons on the 746?

It's pretty easy to use. I learned just about all the options except
the memory keyer stuff in about 15-20 minutes while playing with one in
the store. The dual passband tuning works great. The filter options
are better than average. The receiver seems to perform well with strong
adjacent signals. The RF speech compressor works well (a friend of mine
in another state has one too, and I've heard his).

The manual has lots of mistakes. I wish they had supplied DIN plugs for
the rear connectors. The dual passband tuning indicator reads
backwards.

> Is there a home page for the 746?

Probably, but I never visit those things.

Whats wrong with verticals? Thats what the NDBs use.

If they close them down, as I said in my previous post, you could probably get some surplus antennas, along with the transmitters.

No, they are not used for instrument landings. They are used for
navigation.

Although they are sometimes used to help you find the airport when you are
flying in instrument conditions they are not classified as ILS equipment.
This would be called a NDB approach, and
are being phased out in favor of the GPS approach.

The broadcast of weather info is secondary to their main purpose

Well said, sparks. The autoalarm signal and what follows will most
definitely cause the motors to run faster. It is a feeling you
never quite forget as you donn the tin cans, peak the regeneration,
and crank up the gain till it hurts.

It still is there. It is taken over for Navtex related broadcasts.
I am not sure what the final disposition of the 410-500khz range will
be, but 500-524khz (or something like that) is still scheduled for
Navtex bcsts (512/518khz?).

It would be nice to get the aero bands below that when that stuff
is phased out, although I can sense one could do rather well on
450khz with even modest antennas. It is easy to hear well over
2500nm on 500khz over land or water, with only moderate output
powers (100-500w).

> Those were the days when ship to shore communications were the perview
> of professionals... (boy could some of those guys pound a key!)... now

I doff my hat to those who have pounded that brass for a living.
You, too.... ZUT!

Most had good fists, except for occasional odd swings. And, most can
still run a mean fist. Give a listen on 8364 +-, or catch the tfc lists
a little bit higher up. The ARA Free Press still rolls by QTR 1800UTC
QRG 12826R5 Sundays. The CW is scheduled to cease on 01 Feb 99, but
it is doubtful if the world fleet will be GMDSS compliant by then.
At least 25% is still non-compliant, if the union press blurbs are
correct, as of last Sundays bcst. So, CW may hang on a little longer

in the backwaters of the world. I hope so..... Listen quick, though,
or it may slip into the crackle an' din on 600M.

The only HT I have owned or used has been the HTX-202. I was told by a local ham that there is a general rule of thumb - the wider the freq. receive range - the greater the chance of front end overload on the ham bands. I have been considering acquiring one of the super wide receive 140/440 talkies but am now concerned about overload and distortion. Is this "general rule of thumb" something that was true once and is no longer true, or are the wide band talkies bad news? The 202 is tighter than a mouses ear.

I have been using a D104 for 21 years. First on my old "CB" radio and
now on my Yaesu FT-757 GXII. I find it provides a "crisp" sounding
audio versus the stock mike. I have asked several hams to help me
compare the sound between the two and the D104 wins hands down.

73,
Robert, N2JTX

the rec.radio.scanner ftp archive on the official USENET |
FAQ library ftp://rtfm.mit.edu/pub/usenet-by- |
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label,

and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)
_____
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local
oscillator crystal. However, a 10.245 MHz crystal is used

instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on

the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

4400. WANTED***Old Synthesizers***Drum Machines***etc**********

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-15 00:00:00 UTC
From: rolandman1@aol.com
Message-ID: <754jdp$6lm$1@nnrp1.dejanews.com>
Source record: 123034
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-old SYNTHESIZERS (knobs & sliders pref but not necessary. Moog, ARP, etc)

-old KEYBOARDS (1960's-mid 1980's)

-any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

-old DRUM MACHINES (Roland TR-909, TR-808, TR-606, CompuRhythm, etc)

-VOCODER

-OLD EFFECTS (filters, ring mods, phasers, flangers, analog delays, Space Echo, Mutron BiPhase, ElectroHarmonix, etc.)

-ANALOG SEQUENCERS (analog, with knobs for each step)

-MIDI gear (rackmount synthesizer modules)

-Roland TB-303 Bassline

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

-Roland MC-202 Microcomposer
-Roland VP-330 Vocoder
-Roland Jupiter-8
-Sequential Prophet VS rack
-Sequential Prophet 5 with MIDI
-Oberheim Xpander
-Korg MS50

Please email me at rolandman1@aol.com if youve got anything like the above or know someone who might. Thanks in advance, sorry if this message distrubs anyone.

ftp://boatanchors:tubes@fernblatt.dynip.com/PDF_Manual_Project/Misc/

look for the s38 file... It is not wonderful, but is fairly useful if
printed out.
I scanned it from a copy, which was all I could find locally. Many other
manuals online under the "pdf manual project" folder.

>Steve

And I have always replaced my Motorola's mics with Shure. :-)

But Igor is correct in that Motorola does have decent microphones.
I just use the Shure 800 series as a replacement DTMF at 1/2 the
cost of the motorola DTMF mic, more or less. :-)

Hi,

Name here is Denis, i'm a Ham radio operator call sign VE3HVS
I got two RELM portable HTs model RSP500 VHF 20 channels
I got no manual, no information or specification on them.
I want them to go in amateur band 144-148 Mhz.
Could this be done?
And How to program them?
Need any sofware and programer?
Any help will be apreciate
Thanks Denis.

I have had one since August. I paid over $800 for mine, and I wonder why everyone has them so cheap now., I have considered getting a second one. Has cw narrow fileter, lots of memories, The review is pretty good. you can down load the computer command reference manual at the alinco site.

>similar power levels?

It is probably the latter. SS has spreading gain, but what that basically
means is that it can operate at a low CNR (carrier to noise ratio) in the
spread bandwidth. When despread, it has to have an Eb/No similar
to what you'd need for a narrowband signal in the *despread* bandwidth.

SS can buy you a good deal of multipath immunity (if implemented properly),
and it offers a good deal of resistance to interference, those factors can allow
it to work where a narrowband signal might fail. But remember that the Part 15
SS stuff is allowed to run 1 watt, and a 1 watt signal can carry pretty far.

4418. HUMOR MODE: ADI's ValueMobile is a bust !!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: bdiaz@my-dejanews.com
Message-ID: <75915duuh1@nnrp1.dejanews.com>
Source record: 122852

HUMOR MODE: ADI's ValueMobile is a bust !!!

Please try to read this with a sense of humor.

Last month, the following was posted in this User Group:

In article <72dgleqjs1@nnrp1.dejanews.com>, (November 12, 1998)
ko6ux@adi-radio.com wrote:
> On December 15, 1998 ADI/PREMIER Communications will unveil one of the most
> exciting projects in the history of the amateur radio industry. We will
> unveil our new ADI ValueMobile, and tell you how you can have your chance to
> "get on the bus." Check out our <http://www.adi-radio.com> webpage on
> December 15, 1998 for details.

Wow, just think, one of the most exciting projects in the history of the
amateur radio industry. What could it be: (1) The under $500 HF rig?
(2) A High Speed (> 128K BAUD) 1.2 GHz Digital Radio? (3) Super Discounts
on Select Radios? (4) Some new kind of equipment that's never been
done before? (5) Something else exciting ????

Well, we waited and waited, just counting those days till we found out.
For those of you who click on or after 5:01 PM (California Time) on
December 15, 1998 on ADI's WEB Page you'll see the following:

FROM ADI's WEB PAGE:

. . . we are offering a "virtual" ValueMobile, including your chance
to "Get on the Bus." Owners of our PC programmable AT-600 dualband
HT can now take their radios on tour, by downloading custom radio
data files for cities all accross the United States. Not only will
you be able to painlessly program your handheld with all of the
local repeaters, but whenever you travel you'll be able to load
files for your destination as well as any stops along the way.

http://www.adi-radio.com/amateur/value/index.html

Gosh, I haven't been SO excited since I mistook glue for my deodorant!!!

Just think, the development of AM, FM, and SSB radio was nothing
compared to being able to "take their radios on tour, by downloading
custom radio data files for cities all accross the United States."

On an Over-Hype Scale from 1 to 10, I'd give them a 10+ for this one.
Don't get me wrong, I feel that ADI makes great Ham Radios that offer
the buyer good value, but some Marketing Manager MUST have been REALLY
DRUNK when he (or she) dreamed up this promotion!!!!

In all fairness to ADI, maybe the Product they were working on couldn't be ready in time and this was a way to cover it all up until it was ready. I hope no one is upset by my humor here; it was ment in fun.

Look at the bright side, other companies sometimes have some really odd marketing: A few years back, Panasonic payed to use the name Woody Woodpecker on one of their computers. They had the Marketing slogan, "Touch Woody". While some of us with evil minds might take that in sexual terms, the rest of us would take their "Internet Pecker" in the worst possible way. [Source: Marketing Computers, July 1998, page 42]

So I guess sooner or later, every company's Marketing Department is going to put out something a little off the wall.

I am trying to locate the dealer I bought some equipment from, and lost his name and address. I bought from him at the Ham Fair in Puyallup (sp?), and I believe his store is located in western Washington, on the Olympic Peninsula. Possibly Bremerton?

Any help appreciated.

Louis

4433. FT-920 Mods have errors

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: no8rf@amsat.org
Message-ID: <36793a45.684751@news.earthlink.net>
Source record: 122867
Cross-posted to: rec.radio.amateur.equipment,rec.radio.ewap

going over the mods for the FT-920 I noticed error's in the print out 1st step 5 states to select F-SS (Destina) which of course there is none F-SS it is in fact F-33, further step 6 states to turn dial to OUTSIDE from default of USA, on the newest unit OUTSIDE is not listed just JA, Germany, France ect, some text is unreadable so I stopped there, did not want to fry a radio, if you can give me alittle more information I'll try again otherwise if you have done this mod and would like to give me your phone number I'll give you a call, this mod may work on the older models but as I see it not the newer ones or the mod has changed.

James

>
> Thanks in advance
>
> Ningyuan

Dear Ningyuan,

I saw identical ALC variation behavior when using a Heil head
set with my ICOM 706 Mk II. At low RF output, the ALC worked
normally. At higher RF output, the ALC indicated that I was severely
under-driving the microphone input to the rig. I called Heil. Heil's
support people confirmed that this is a common problem with their
microphones and the 706, which requires a high signal level output
from the microphone (unlike Yaesu and Kenwood). The Heil microphone
puts out a very low level signal, much lower than the ICOM 706 Mk II
expects. The Heil support person said that I must use a signal
amplifier between the low output Heil headset microphone and the 706's
input.
I did not have have this RF level dependant ALC problem with
the 706's stock ICOM microphone.
Are you by any chance using a non-stock (non-ICOM) microphone?

10m-160m continuous coverage, 100watts output
Autotuner,100 memories, Pass Band Tuning mod added
Narrow CW and AM filters, original double box and manual.

This radio is in mint condition, not a mark on it. Operated in RX
only the last 6 months. Unfortunately, my neighbors have forced me
off the air. I need to go mobile, so will consider partial trades for
mobile
sized Icom HF rigs.

Shipped in CONUS for $1300US. Payment can be made via cashiers
check. Email for details,

Jim K2NAX

>

"moderate" power (100-500w)? why not go the full gallon? i've dx'd the ndb band for years. many foreign beacons
which i've logged were running only 25 watts. so, why higher power? no offense intended but contact can be
routinely made with under 100 watts.

keep in mind that europe and africa use this band for their broadcast band.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

Send me email...

Hello
I recently aquired a bunch of boatanchors from a
ham who is 78 yrs old and is getting out while he can.
The equipment has not been on in about 7 yrs but
most he says was working when last tried/used.
This guy is one of the pioneers in 432/1296 and
is a real nice fella!

anyway the equipment as follows

SA25 Vectron microwave spectrum analyser <X BAND>
National VHF TUQ transmitter <rx?> I have no idea but
it is definatly heavy, and works.. xxxxxxSOLDxxxxx
HP model 500a freq counter 0-200 mc
Phazor Phasemeter model 200 asi
FR6/U Freq meter us signal corps 100-500mc
FR5/U Freq meter us signal corps 10-100mc
High pass filter Geotech model 1501
COLLINS T217 gr/r27gr/md125agr xxxxxxsoldxxxxxxxx
Audio sig generator hp model 205 ac
random noise generator type 822ar Scott inc
Crystal impedence meter model Ts330/TSM checks the
quality <how strong the crystal is> of a crystal
AN/UPM-8 radar test set xxxsoldxxx
HEATHKIT model HX-30 6 meter SSB/CW/AM xmitter only
no mike <has a 1 connector mike plug added> with spare final
and manual
about 6 8 ft tall military/faa standard racks.
2 6 ft tall military/faa standard racks

I am definatly open to whatever resonable offers for any
or all of this equipment I could ship, but some of this is
so heavy that it would have to be trucked <expensive!!!>
I will deliver approx 200 miles with gas money <don't worry
my GMC pickup gets 26mpg HIHI>

4459. 2m/440MHz gear and Cushcraft R-5 vertical HF antenna for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: Jerry Bransford <jerrypb@home.com>
Message-ID: <36773A13.291B@home.com>
Source record: 122923
Cross-posted to: rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap,rec.radio.amateur.swap,rec.radio.amateur.packet,rec.radio.amateur.equipment,

1) Standard (brand) "Twin Bander" (Dual Band) 144 MHz/450 MHz FM Transceiver. Includes optional 100 channel memory upgrade. Can also be used for repeater or packet duties. All controls are on the microphone so you can mount the main unit anywhere in your car or truck. It includes the 2m extension cable between the microphone/controls and the main unit. It works perfectly and looks near new. It's never been abused. It has been modified so it can transmit/receive on Civil Air Patrol frequencies. It is made for mobile use so it needs 12 volts DC to operate on. It has around 50 watt output and can receive from 118 MHz to over 800 MHz in addition to the ham and CAP bands. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible.

2) ICOM IC-W2A Dual Band FM hand-held Transceiver. 5 Watts output. Also modified for use on the CAP bands that have no negative effect on normal operations. This also receives outside the hambands too and includes 118 to over 800 Mhz. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible. This unit can also operate packet. 60 memory channels.

3) Cushcraft R-5 HF Vertical antenna. Perfect for the 10M band now coming back alive. This unit is near-new, since it was only installed a couple hours before a neighbor threatened to sue me over it (CC&Rs). Please, no comments on that LOL... I dealt with that some time back. I don't recall the specific bands this antenna works but 10/15/17/20 come to mind.

If you don't want to spend cash, I will negotiate for certain items I want you can buy off your credit card and ship to me in exchange.

Please, PLEASE... don't contact me UNLESS you are serious about buying one or more of the above units, I get too much email as it is. I'll accept best offers for them all. $350 minimum for the Standard, $300 for the ICOM, $150 for the Cushcraft. You pay shipping costs.

4469. Re: CTCSS Decode (FTS-22) in FT8100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: Kim Leary <leary@startext.net>
Message-ID: <01be28d3$ff9de160$21de37cf@leary>
Source record: 122933

Here is an email that Yaesu Tech Dept sent me :
Hi Kim,

When installing the FTS-22 in an FT-8100, you can use the supplied adhesive to attach it to the underside of the top cover, in the area shown in the manual.
It will also fit (with some work) between the front panel and the main chassis. This area can be accessed by removing the 4 silver screws that hold the front panel to the chassis, and attaching the FTS-22 to the chassis. Having the FTS-22 installed this way makes it much easier to open the radio again, as you do not have the board stuck to the top cover. This is NOT in the manual, and you must be very careful to avoid shorts with the backside of the front panel.

Hope this helps. If you need any further assistance, email again, or call me at 562-404-2700 x 242

From: ldh3@cornell.edu
Message-ID: <758b3p$reb@newsstand.cit.cornell.edu>
Source record: 122934

I had a similar symptom in my 930S when I bought it. Sometimes it would wake up properly and other times not. Didn't have your "no tune change" problem though. It would also do things like display 32.222.22 and get 'stuck' on one freq while tuning. Turns out there was a known problem with the cleaner they used on the digital board during manufacture -- it corrodes the PCB itself and the through-solder holes become open. There is a Kenwood service bulletin out on the problem which lists symptoms and which hole they relate to so you can solder up the offenders. I pulled the digital board out of mine and it was already soldered up, so I had to replace it at $290. Ouch. But damn, it's a really nice rig, I prefer it to all others I've spent any time on. Love that tuner. Anyway, here is the URL you need.

http://www.kkn.net/~k5tr/ts930fix.html

Also, I was advised not to ship a TS-930S by Milton Lord as it also is known to have fragile wiring harnesses. It's great sitting there but the 3 foot UPS sorting rack drops really do a number on it, and the TS-940 as well. Just a caution.

Good luck and let me know how it turns out! Love them 930's.

Source record: 122936

I would like to purchase or possibly trade for a MT1000 99 channel model
146-174MHZ

I have a HT1000 16ch with:
Rapid Charger
Nylon Case
Speaker Mic
Extra Battery
Vehicle Battery Eliminator
RFDepot
RFDepot@aol.com

4473. FS: Kenwood TR751A 2M All Mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: Pat Myers <captain@texas.net>
Message-ID: <3677c745.0@news.newsfeeds.com>
Source record: 122937

For sale: Kenwood TR751A 2 meter all mode mobile. FM, SSB, CW. 25W out. Included DTMF mic, and optional PL tone board installed. Manual, mounting hardware, including an IIX mount with the 360 degree swivel base. Had it bench tested and it was pronounced an excellent performer. Asking $250 and will ship.

73,

Pat Myers, N5MZL

4478. Why such low power for SS?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <3677D7ED.7B6ABEFA@umich.edu>
Source record: 122942

Help me out here, if you can - I understand how spread spectrum uses bandwidth more efficiently, how more radios can share a given slice of spectrum if they use SS, and how we fixed-frequency ops might not detect SS ops co-existing on our frequency (up to a point, anyway). What I *don't* understand is how SS radios seem to get away with amazingly low power transmissions. What am I missing here? Am I mis-understanding the power figures? perhaps typical SS work uses more power than I thought. Or maybe I'm mistaken about what a fixed-frequency rig could acomplish with similar power levels?

Thanks for any light shed in this dark corner.

73 de Bob, KI8AB

4482. Nuvistor Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-16 00:00:00 UTC
From: mradtke@oak.az05.bull.com
Message-ID: <F42JC6.BMw@sundevil.az05.bull.com>
Source record: 122946

Hello,

I was looking at an amateur radio swap meet for a pair of scope probes. I found an old Tectronix 585A with probes for $5. Since this was cheaper than any probe that I found, I bought it planning to scrap the scope and keep the probes. However, I was surprised to see that the scope works fine except for a bad 7586 Nuvistor in one of the vertical amps (in the plugin). So, I am looking for an inexpensive 7586 for this thing, and then I'll donate it to a school or electronically precocious young person. (Of course, then I'll still be looking for the probes!)

A 6CW4 and a 6DS4 cross reference.

Any suggestions?

Thanks,

Mike

4486. HF Bang for the Buck ??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-17 00:00:00 UTC
From: Tom Brown <ab7tu@parg.org>
Message-ID: <3679F529.7FBC@parg.org>
Source record: 122750

I've been reading a lot of opinions on the different used HF rigs. I'm using a TS-50 / AT-50 as a home station, and with the CW filter it serves my needs. Got rid of a TS-450 that I liked because the guy made me an offer I couldn't refuse.

I think I'm going to go for the TS-570DG. CW is my primary mode. Thought about the TS-850, problems and noisy front end they said, get the FT-990. My buddy who buys and sells lots of gear said, noisy RX on the 990.

A guy in the club has a IC-736 that I operated for FD, CW (WB7QIW). It seemed to work fine, and he wants to sell it. I think he wants more for it than what a 570 will cost, and it's not as full featured. I think I remember hearing the 736's were dogs. Again I'm not interested in Fone.

Any comments would be very much appreciated.

Seasons Greetings, de Tom 73 ..

From what I have heard when this mod was first posted on the Web it was obtained from a source in the Orient, and there was a warning about rigs with different versions of E-Proms. The mod consists of an executable program which re-writes the frequency tables in the E-Prom which stores the micro code for the CPU/radio functions.

I would assume there is other information stored in the E-Prom also, and if the re-write of the frequency data tables exceeds the allocated data space for a given E-prom version, it may overwrite existing data necessary for other functions. Additionally, I understand that the E-prom flash is a one

shot deal, if it doesn't work, then the E-prom and/or CPU will need to be replaced.

Since all of this info is second hand, I cannot vouch for it personally. If you want to take a chance, well, it's your rig...

However, given the fact that Yaesu will perform the proper MARS/CAP mods for free with proof of license, I would just take/send it into them and have it done. My experience with their turn-around time has been very good - usually within 2 weeks. A few bucks for shipping will sure beat the cost of replacing the E-Prom and/or CPU...

73 and Happy Holidays de KF6KNB

4490. TS-570DG question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-17 00:00:00 UTC
From: Jim Keller <jkeller@home.com>
Message-ID: <36788E35.5AF14087@home.com>
Source record: 122798

I'm thinking of purchasing a TS-570 DG. I'm curious as to the performance of the internal auto tuner. I'm using a trap vertical with an SWR in the area of 3:1 at the band edges and was wondering how the internal tuner handles that type of mismatch. Is anyone using a manual tuner in place of the auto.

Thanks, Jim WB6YxY

Rick, your assessment is correct.

In the context of this newsgroup, the announcement also gave me the impression that a private individual has one second-hand Cushcraft antenna for sale. Whereas it is actually, and deliberately, a cover for an advertisement for Cushcraft antennas by someone who deals with them in quantity.

It falls into the same category as SPAM but is unfilterable.

Reg.

I have the following for sale, All items are in good working order. I would prefer Postal Money orders only or Postal COD.

PPProducts, RF bug detector, model #P7040, works great, read RF fields via bargraph or speaker(tone) or both, with stubby
antenna, works on 9V battery(included), with instructions, great for RF sweeps, from 5-2000MHz, sell $75.00

YAESU VX-1R, Version A106, received as gift, I already have one, all original equipment, i.e. antenna, box, manual, charger,
strap and warranty card,ADMS-1D software and cable... will sell for $220 plus shipping

GE portamobils, set of two, no antenna, units power up, they come with chargers/handsets, low band
VHF, two channel 46.8/46.9 sell for $50 pair plus shipping

Color CCD dome camera, 12VDC input, NTSC color video output, great picture, photo upon request, great for
surveillance, $150.00

Magnavox, front/real video/audio input 14" COLOR NTSC monitor, works great, used with above camera, sell $50 plus shipping

BW Board camera(CCD), pinhole lens, 12V input, NTSC output via RCA jack, very small, 1.25" square by .75" deep, sell $65.00

BW board camera, same as above, mounted in PIR detector, sell $75.00

BW board camera with zoom lens, adjustable focus mounted in plastic box, unit comes with power supply and 4" BW LCD video
monitor, both units run on PS included.
Adjustable contrast/brightness - pair for $150.00

1/3" BW board camera C mount, with computar 75mm lens(c-mount), excellent picture, sell for $145.00 obo

I can take photos of all items if need be, e-mail me with questions..

I am leaving the hobby.. Below is my list of items forsale and
I have more not listed that would be better coming to my qth
to see if you want to purchase.. Basically I'm cleaning house!
Tnx 4 reading my post Thom j.

Items sold are marked as: *SOLD!!* Or might be *SOLD??*
[A] *SOLD??*
Forsale: AR-270B 146/446MHz 5.5/7.5dB 7.7' Never used but
assembled. Cost new $100 Price $65/bo w/pl259 connectors &
coax included. Dont want to ship since its already assembled and
tuned.. I'm in Burlington {Southern} NJ across from Phila, Pa.
[B]
All Forsale:
1st Item ; Astron 15amp power supply never used. New $80
asking $50/bo. Cant not ship.
2nd Item: Astron 35M power supply never used. New $169
+ tax.. Asking $130/bo. Can not ship. *SOLD??*
3rd Item: MFJ-931 Artifical Ground. Never used New $80
asking $50/bo + shipping *SOLD!!*
[C] *SOLD??*
4Sale "Glen Martin Roof Tower, Thrust Bearing & Heavy Duty!"
Aluminum Mast Price & Specs New from Glen Martin are below:
#1; New Glen Martin Roof Tower, Specs & Price...
Model: RT-424, Height: 4.5', Shelf to top: 34.75, Base width 24&#65533;,
Max Ant. in sq ft @ 87mph@6 / 100mph @4.5 / 112mph @3.6,
Max Ant load: 100lbs Weight: 18lbs Price: $162.00+ Shipping
#2; New Glen Martin Heavy Duty Thrust Bearing, Specs & Price...
Thrust Bearing for rotating setups, premium quality, weatherized
twin bearing for 1.3 to 2.6 mast diameters. TB-25 Price: $89.95
#3; Glen Martin Heavy Duty Aluminum Mast, Specs & Price...
MA-2069 106" X 2.375" OD ,.145 wall aluminum hvy duty 12 lbs
$108.00 New Price for all $359.95 + Shipping and Un-Assembled.
Everything is like new and completely assembled. Asking $240/obo.
Must Pickup! Qth Burlington, NJ. I'm about 10 miles S. of Trenton
& 6 miles N.E. Of Phila, Pa.. Email or Call 609-386-9382 Or
if busy Call: 609-386-3272 {afternoon's only please!!}
[D]
Forsale: Both New never used One MFJ 1272B & One 1272BX
microphone/tnc switch box. Includes all original info docs, manual,
& etc. New $39.95 each + shipping or sales tax. Asking $20/obo
each + shipping...
[E]
Forsale: *SOLD!!*

Kenwood SW-100B Power/SWR Meter. For 2mtr-70cm.
Measures 150w out from 1/4w-50w in fm - ssb. Great for
home or mobile with ac internal light. A real nice meter. It's
in mint shape. Included all original docs, manual, box & etc.
Works great... Price $60/obo + shipping.
[F]
Forsale; Star Micronics. NX-2420 Color Printer
With tractor printing. Includes complete users manual, printer
guide, tractor paper, printer cable, dust cover & extra printer
ribbon. It is scratch free & works great. It is as close to new
as it can be. Price $65/obo Must pick up! You can see how
well everything looks & works. Will include like new printer
cart/table for a few extra dollars.
[G]
Forsale: Wood Computer Desk/Cart with sliding printer draw
+ sliding keyboard draw. Nice compact cart/desk with rolling
caster wheels. Condition Fair-Good. A nice computer/printer
desk/cart for a student or small area. $55/obo. Must pick-up.

[H]
2 meter Cushcraft 8elem {ssb or fm} beam with 50ft coax,
RadioShack rotor & control box $80/obo for all.
[I]
Antron 99 with radial kit, 34ft telescopic mast w/ guy wire
attachments & 50ft of coax. $50 for all. Mast needs good
cleaning! The Antron 99 works great!
[J] 'Uniden Bearcat BC 590XLT' scanner. Has all bands
ham, wx, fire, police air & tech opened for more.. Many
features 'i.e. 100 programable memories, scans all band
ranges, instant scan wx, fire, police, air & more. Manual
and antenna included $90/obo Like new.. No 900mhz
[K]
Finally.. I have coax jumpers, guy-wire, L-N connectors,
elbow connectors, 8x coax, plus other computer extras &
more. This is something you should look at and see if you
need any of it or not. Rather sell than have all this just sit.

If you see anything or want to come here please re: me or
call (609)386-9382. If busy call (609)386-3272 [please
afternoon's only!! Ederly mother is very ill]

According to Bob Heil's "Handbook For Radio Amateurs," the D-104 my be used in a low impedance circuit effectively if you put a 100K or higher resistor in series with the hot microphone lead. I haven't tried it but have heard from others on the air that it works well. Good luck. Let us know how it works on the 706 MK II.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6OO, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

4514. Re: [Q] How to use HP-415E SWR meter...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-17 00:00:00 UTC
From: nielsen@primenet.com
Message-ID: <slrn77if81.1ia.nielsen@nielsen.tus.primenet.com>
Source record: 122822

It's been a long time (~20 years) since I have used one, but it requires
that the r.f. signal be modulated (1 khZ, I think), and a crystal detector
is attached to the probe of a slotted line with the output fed to the 415.
You adjust the position and insertion of the probe and the scale of the
415 to get a full-scale peak reading. Then you move the position of the
probe to a null and read the VSWR directly from the meter scale.

They can also be used to measure relative signal levels in other
applications.

You're correct, over-hype is EVERYWHERE and is nothing new. (I work
in the computer industery and over-hyping products is the norm.)
I guess we're exposed to so much of it, we tend not to notice it.

I decided to have a little fun with ADI's announcement.

It beats hell out of the TS520 I had for 12 years! It has dual vfos, 100 memories, and the Review in QST liked it. I found errors in the interface commands documentation, but
can use Hyperterm to control all functions of the radio that I can control from the buttons.
And it takes the commands in ENGLISH not in BCD or Binary!

Hello, I'm looking to buy the PC programming cable for the ICOM Q7A/Yaesu VX-1R/IC-W32A/FT-51R line of radios. This cable is supposed to be compatible with this latest bash of mini-HTs. I do not need the software, I only need the cable (with the RS-232 on one side and the jack which goes into the radio on the other.) If you have one, please email me.

Thanks, 73

Kenwood cautions against using the auto-tuner when the SWR exceeds 3 to
1 because damage may occur.

Clint,

I wasn't making fun of the fact that you can download different repeater settings for different ciities, I was joking about the over-hype in which this was presented:

>> On December 15, 1998 ADI/PREMIER Communications will unveil one of the most
>> exciting projects in the history of the amateur radio industry.

Providing pre-programed repeater selections for the different cities is very helpful, but I think it falls a little short of "the most exciting projects in the history of the amateur radio industry." :-)

73,
Bob

4522. ICOM BC-30 Charger w/HTX-202 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-17 00:00:00 UTC
From: dalien <dalien@pacifier.com>
Message-ID: <36795FAC.D54EDDF9@pacifier.com>
Source record: 122830

Since the Radio Shack HTX-202 is a derivative of the ICOM 2AT, and the battery packs are interchangeable with the 2AT, and the bottomside charging contacts appear the same as with 2AT packs, is there any technical reason not to use the ICOM BC-30 charging stand with the 202 rechargeable battery packs?

Thanks,

Dave - w6ovp

Almost new (used it once to test a car audio at home) Tripp Lite PR-25 13.8V 25A DC power supply. Newwark price $167. $50 plus shipping and COD.

Used but good condition 48VDC regulated 10A power Sola 28-2233 supply. Newark lists it $553, sell $199 plus shipping and COD.

Also about 20ea. Condor Value Line type switching power supplies. +5V @~3A, +/-12V @.5A. I will check the exact part number. They are used but in good shape, I have so many will not be able to check so as is, $10 each. Allied sells similar ones for $78.

Open chassis with massive heat sinks:
1ea. Fully regulated +5V @60A, and other +/-15V ~@3A (I think...)
1ea. Fully regulated +5V @20A, and other +/-12 ~@6A (")

Send me an email if interested, I will send you the better details. These were part of an industial OEM control system.

Please let me know if you want any of it. My zipcode is 53092 so do a quick UPS calculation for shipping charge and COD.

Source record: 122837

Martin, the autotuner came with the rig as a standard item. It works great and it works on both transmit and receive (its about time).

The little rig is a dandy. But I must tell you that I have two Kenwood TS-930s rigs and although they are old, the receiver is a bit more sensitive than the TS-570DG. Also it is quieter. But the DSP is great, and I would not part with the little rig. Also, the keyer works fine. I have been using the CMOS-II and CMOS-III keyers, which are my favorites. But the Internal keyer is one of the few good ones I have found. Also the QSK is quite good.

Best 73, God bless you and I pray that you and yours will have a very merry Christmas.

Hi folks,

I need some advice on HF + 6m rigs, I don't want to spend over $1K so that narrows it down to the Icom 729 and the Kenwood TS-680. I've read the QST reviews, but I want info from people that have owned or used either rig. Also, are there any other radios that I over looked?

Another question I have is regarding computer control (ex. Icom 729). How exactly does this work, does the manufacturer provide software or do I have to go to a third party? Any and all help is greatly appreciated.

Hi all,

I'm looking for a new battery pack for an Alinco DJ-G1T 2m handheld. New from Alinco they're $70-$100, depending on voltage & capacity, but this is only scarcely less than the radio itself was being sold on clearance for a couple of months ago! Needless to say, I'd like to find something less expensive. I'm interested in the 7.2V, 70mAH version, but would consider the other types if the prices are good. If anyone knows where I can get something that will work, please drop me a line.

Thanks,
Rodney - KF4COV

Chris,
I just replaced a TS-680 with a TS-570SG. First, the TS-680 is a good rig. The general coverage receiver is a nice plus. The slide pots are not very appealing to me though and there are three of em on the '680. The bottom line is it is an excellent piece of communications gear. I would sell you mine for $575. However, if you work at it you can get a used TS-570SG (nope, I won't sell mine) for just under $1K from someone who is scared of the battery depletion problem. You then fix the problem with a Kenwood approved modification and you have a terrific DSP radio with 6M. After the pain of spending $975 for the '570 is gone you will be enjoying the rig a long time. . .
Art

I just bought one. It is worth $100. as-is. VHF 1220 baud Packet, RTTY, CW receive,
HF AMTOR. They have solved the HF sensitivity problem, PACTOR and Wefax seem resolved (minus some features at the moment).

They are planning a CW transmit daughterboard add-on (AEA never designed CW transmit into the box).

Seems to me that this is the perfect Ham device. Enough features to justify the
price, with lots of potential bonus features that will result from Timewave and
others tinkering.

From what I heard, folks had best get theirs now ... when they break through some
of the poor AEA code and design problems (as they are doing quite rapidly) they
will be able to raise the price ... or they may run out of the stock they bought from
AEA! (They had understood that this box was ready to sell and fully functional when
they aquired the stock from AEA in bankruptcy. It was not and the delay in rendering
it fit for sale pushed Timewave into bankruptcy ... but they are roaring back!)

Nope, no affiliation whatsoever with Timewave (well, I do own a DSP-599zx),
just love
it when an small business takes risks, gets burned, recovers, and keeps
innovating!

Hi....
I have a Kenwood TR-7950 that won't transmit (everything
else works fine). The problem is in the PLL UNIT #x50-1900-10.
I verified this by borrowing that particular board, out of another
7950.
So.... I need to find myself another board with the above part
number.

===Anyone have a junker or parts 7950 out there ?????====

The board I need is the one on the bottom of the radio, at the back.
It's part # is PLL UNIT x50-1900-10.

I'd be willing to pay $30.00 for one of these boards in working condition.

email me if you can help....

Ron n8lmt@usa.net

> The 202 is tighter than a mouses ear.

Yes - the HTX-202, curently discontinued in favor of "sleeker, sexier"
designs, is one of the finest 2Meter performers ever.

The newer "wide band" units are not "bad news." Even the best of them will
blast a little intermod at you in dense city environs...if you live a little
out of the microwave/pager paths, you will do better.

The modern HTs are incredible...you will be amazed at how many "more" features
are available in smaller packages than your HTX-202. Get opinions from your
local Amateur Radio club!!!

I would add... if you're going to open the cover... be CERTAIN to
short the tubes' plate caps to ground.

A local amateur once asked me to try to get one of these working for 10
meter FM. He'd bought it at an estate sale. Since I'm the paranoid
type, I took a voltmeter to the plate caps before doing anything else -
and was shocked to find 200 volts! The amplifier hadn't even been
plugged in in over a week! A further check showed no bleeder resistors
in the power supply - a VERY dangerous situation.

Sounds to me like the people who build these adhere to the same design
standard as I was told applied to one popular TV manufacturer of the
1950s - take a competitor's set that works, and start removing parts.
If removing a part makes it stop working, put the part back in & remove
something else.....

It could be that such ads stand out here . . .
It could also be that there aren't 5000 ads for Sabers, Astro whatevers and Master IIs here.
Thus, hams may prefer this newsgroup over r.r.s. I know that lots of hams use GMRS gear but there is more to ham radio than FM . . .

However, this group is SUPPOSED to be for the discussion of amateur radio equipment and not for commerce in same. It is as simple as that.

Regards,

Bill

4563. FT-920 Notch Filter Comments?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: Guy Atkins <gatkins@zetec.com>
Message-ID: <75e5b4$7po$1@remarQ.com>
Source record: 122657

I use a FT-920 strictly for receive-only purposes on the tropical bands below 5 MHz and for occasional foreign mediumwave DX. I usually tune these AM mode signals in ECSS (LSB/USB at zero beat carrier). I have INRAD's 1.8 kHz SSB filter and 6.0 AM filter installed.

While the FT-920 performs admirably, I'm somewhat disappointed in the Auto Notch feature. It often will not notch an offending tone, particularly middle-to-low frequencies (even at stronger levels). When the Auto Notch *does* work, the results are great! Once in a while I'm able to get rid of a het with the high or lowpass DSP filter knobs. Of course, the passband shift control is often very useful to avoid a highside or lowside het.

Does any one else experienced mixed results with the Auto Notch? Is there any way to improve its performance?

It would be great if the DSP knobs could be used to *manually* sweep a notch across a wide range of frequencies, in addition to its normal use.

Exams must be submitted within 10 days from the date of the exam unless a valid reason can be given for it's delay.

Once you see your call on the FCC website or QRZ or whichever does a daily listing, you are permitted to use your call sign. You need NOT wait to get the actual license in your hands as was necessary in the past.

If you haven't gotten your call sign posted yet, not withstanding the actual license, I'd contact your VE team or their VEC, be they W5YI or ARRL or whomever. The licenses were coming out quickly for a while, but got bogged down a bit, once again. So it may be a while, especially with the jamming of the mail system with Christmas mail. But, the call SHOULD be posted promptly. Of course, you could also call the FCC on their Toll Free phone number if you can't access the websites. The number is: 1-888-225-5322

Advice from a VE Team Leader with monthly exams for over 3 years.

Any replies, please do so directly, as I don't get to read mail on newsgroups all the time.

Happy Holidays and Happy Hamming.

>David
>kd5fdw

You want a directional antenna (Beam preferred, Loop will work too but
not as well) and an RF attenuator, all connected via quad-shielded
RG-6 cable TV cable.

Obviously, to find direction you need a VERY directional antenna to
point in the general direction. However, when you get close the
signal becomes strong enough to diminish the directional
characteristices of the antenna as well as "leak" into standard cheap
RG-58 or RG-174 coax, bypassing the antenna altogether.

If the radio is relatively well shielded itself (won't pick up the ELT
at close range with antenna disconnected or the antenna jack shorted
at the radio), then as long as your coax is is leakproof to RF (this
is what RG-6 quad-sheilded cable TV 75 ohm cable is REALLY good at!),
then all you need to get ot make would be a multi-step RF attenuator.

This allows you to selectively cut-down the signal level as you get
closer. It is easy to build.... simply use an old-fashion rotary
switch (mounted in a metal shielded box) with about 6-8 positions.
Connect the coax that goes to the radio to the center (moving) common
contact of the switch and the coax that goes to the antenna connects
to a switch contact at one end of the switch (first position).
Connect the contact on the OTHER end of the switches rotation (last
position) to the coax shields (ground).

The idea is that when the switch is in position 1, the radio is
directly connected to the antenna. In position 2 through X, you are
PHYSICALLY increasing the air space between the radio's antenna jack
and the antenna. In the LAST switch position the radio's antenna
input is connected to ground. To maximize the efficiency of this
method, the coax from the radio to the attenuator should be relatively
short.

I have used this method with a 3 or 4 element 2-meter beams in hidden transmitter hunts with extremely good results. It consistently has outperformed the "high-tech" multi-antenna phasing systems that come and go. If the operator is practiced, he can outperform a microprocessor's interpretation of the RF environment in many cases. Reflections from water towers, buildings and hilly terrain are the reasons that practice really helps. You need to interpret what you are seeing and make value judgements.

Of course, DON'T transmit into this lash-up... put on the duckie or connect the beam directly to use the transmitter of the same radio. It is better to commit a real receiver to the hunting lash-up rather than a wide-band front-end scanner or amatuer rig. The improved selectivity and freedom from false signals is worth it!

That limits it to two series of GE mobiles. Yes, they are very confusing
at times, and I work with them daily. The Mastr if a black case with a
footprint
about a foot square, is as far as I know referred to as a "Mastr Exec" There
was a later version of this with Solid State PA called the Mastr Exec II
line.
(its case color is beige, similar to the Mastr II line)
The is also the MASTR Pro that came out after the Progress Line (which was
all tube). It is in three sections - RX, PS,TX - and is dark blue in
color. The
Royal Exec is physically similar to this as well, but is all solid state and
low
power -- only if I remember correctly, which I may not.

I will not even mention the TPL, or "Transistorized Progress Line" which was
a very buggy early solid state design.

The answer to your question - the conversion to 6 meters can be done,
but is best if the radio is of the correct split. I may have some info
around
on some of the older units if you will give me the Combination Number on
nameplate of the radios.

That did not fix mine. I have seen this ambiguity in every DX-70* I have ever seen, though I have only sat down at a hlf dozen or so of them they all had this problem. I can turn the knob clockwise, and it may actually go up in units/channels, or it may go down for a click of two. Very odd.

4582. TS-830 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: debryrw@oz.fd1.uc.edu
Message-ID: <75ehoc$7ue$1@news.ececs.uc.edu>
Source record: 122676

Hi folks,

My venerable old TS-830s has developed an unusual problem. The plate capacitor no longer dips the plate current at the settings indicated on the front panel (it used to). Now, for example, to tune up on 15 meters the plate cap must be set with the little indicator bar about vertical. For each band, the plate cap setting at resonance is now offset about that same amount counterclockwise. (I hope this makes sense to TS-830 owners). It does seem to work, in that I can tune up to normal power output, get on the air, and make contacts with normal signal reports. I don't have an antenna for 160, but it does appear that it does _not_ properly tune to resonance on 160 into the dummy load.

I have opened the thing up (not bad for a proud member of QCAO), and it appears that the cap has not simply shifted position relative to the knob, as I cannot intentionally make it slip in either direction. Also, the changed happened suddenly, not gradually. For comparison to a "normal" 830, the plate cap is fully unmeshed when the indicator bar is right about in the 21MHz position.

If something has actually changed besides the knob position, one guess is that one or more of the tinned, crimp on lugs on the bandswitch has become oxidized, thus becoming an insulator. I did have to go and put conductive paint on a few of the crimp-on plug connectors in other parts of the radio, for this same reason.

The bandswitch, however, looks to be a pain to get at. So, before I disassemble the whole RF final compartment, I thought I'd ask the collective wisdom if anyone has seem this phenomenon before, and might have a specific suggestion as to what is wrong.

Thanks in advance for any help.

4584. Re: Alinco DX-77T NEW $585 free shipping Tech America

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: macw2389@my-dejanews.com
Message-ID: <75eoem$qb0$1@nnrp1.dejanews.com>
Source record: 122678

Just about any radio beats TS520 (circa 1975) except for audio. If Tim is asking whether the DX-77T has good communication spec/performances, my advise is "don't buy anything just because it's cheap". However, if you want to try PC control, DX-77T could make good peripheral, although other radios might give you more joy once you have it started. Nowadays we see rarely any HF rig covering only HF bands with no option to extend to VHF.

I've heard very good things about LOGEQF. JBI bundles the LOGEQF program with
their computer interface kits.

4591. RE: Selling Equipment in NG's Other Than rec.radio.swap

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: ki0dz@juno.COM
Message-ID: <19981218.165519.-46081431.2.ki0dz@juno.com>
Source record: 122685

Bill and the group,
I concur that a lot of equipment is sold in this NG, even though the FAQs say this practice is discouraged. A couple of years ago I looked into the art of buying and selling amateur radio equipment using the Internet. A whole web page grew out of that effort. I now have a subpage (Online Swaps) from my QSL.NET page (in sig file below) that lists sites, NGs, and a reflector that can be used for this purpose. I'm even planning on adding a section dedicated to on-air swaps. That should be ready in a month or so (?).
Hope this information comes in handy sometime in the future.

Source record: 122686

Sounds like a capacitor in your tank circuit has changed value. It's pretty hot in there and that rig is getting on in years. One of the capacitors is probably on the verge of giving out. You can get to that component without really having to tear everything apart to check. I used to have an 830 and the biggest mistake I ever made in ham radio was to get rid of it. If you don't wan't to mess with it, I'll trade you a Yaesu FT-101E in great shape and a little cash for your 830.

Wayne, KEï¿½BZ

Does anybody have any experience powering an amateur radio transceiver
with 120V modified sine wave? I have a whistler 500 watt inverter.It works
fine for compact flourescents, no bizz, and a 12 inch black and white tv but
I dont feel like experimenting on the Kenwoof TS 530S.
Thanks Paul K. N9EMX

I have observed pretty much the same thing. Sometimes it works very well, other times it's like it's been turned off. The last time I was at Yaesu, I went in the back and discussed this with the techs. I was curious if maybe there was a firmware update, etc. They told me that they had heard this complaint from a few other users and would pass the info on to the boys back at the factory.

I suggested they take a look at a Timewave DSP 59+. The auto notch in this unit works like a champ- in any mode. Maybe a very technically astute person could reverse engineer the ROM code in the Timewave and figure out how to improve the notch algorithm in the Yaesu.

In any event, I am very happy with my 920 overall, and the notch filter issue would not have been as big a deal if I didn't have the Timewave unit hooked up to my TS-850 to compare it to. Hopefully Yaesu will come up with another firmware rev for the DSP which will correct this minor annoyance sometime in the future...

Hello,
I have just returned from Japan yesterday and found that IC746 can be bought for $1300 from Ham-Keppan store in Akihabara and they have plenty in stock. This price include VAT tax. If somebody goes to Japan, you can ask him to get one.
Good luck to you.

You got a great deal on the 430S...

The going price for TS120's is still $275 - $300 for a clean one.

Just my opinion..

I live in San Francisco, but I do alot of traveling. I was looking for a good SW Radio in the $100-$200 range. I found 2 that most people seem to like, but need help in making a final decision.

The first is the Sony ICF-7600G (which has synchronous detection) $169.

The other is the Radio Shack DX-398 (aka Sangean 909) $199.

Since I live on the west coast of the United States I realize that I might need to get something that is a little more sensity.

Is the Sony more sensity then the DX-398?

Is the synvhronous detection something that I realy need?

Also...

What kind of antenna should I get? I heard the Sony AN-LP1 is good.

any comments or suggestions are welcomed.

It has tune, load, pre amp (on off), mode (ssb am), function (oper.
stby.), output (low high), and power controls.

It also has a Band switch on the front panel for 10,15,20, and 40
meters. If it were designed for CB, it seems like a lot of extra work?

Thank you.

Louis

Can't be THAT hard... Just from looking at the pictures in ads, it would
appear to be a simple turnstile-type antenna(there's an article about
building them in the Jan '99 CQ-VHF), bent in a circle and an optional
groundplane. Heck, I might as well give it a try.

I use the glass from Coleman gas camping lanterns with my 4-400s.
They come in two sizes, I'm not sure if the larger one will
fit over the 4-1000 or not.
They are cheap (like 1/10th the cost of what Eimac wants)
so you could get one and give it a try.
I got mine at the sporting good dept. at Wal-Mart.

Possibly there are (or were) two Palomar Companies ? I have seen a unit marked Palomar 90 in the past which was just as you described except it had no band switch. It was about 12" wide x 4" tall x 10" deep. The case was two piece, a top and bottom "U" shape. The top was black wrinkle painted, and the bottom and both front and rear panels were clear coated aluminum with black lettering. The front panel used old style toggle switches and large black "Collins" type knobs for load and tune controls.There was also a edge panel meter that indicated relative RF, via a simple diode sniffer circuit, for loading purposes. It was put out back in the mid-70's by Palomar Electronics in Escondido, CA. Used a pair of 6LF6 tubes too. Perhaps they marketed stuff for both services ?

Hopefully, someone else may respond who has seen the exact unit you have and can give you more info.

How true can this information be ? why would mods be different from one radio to the other if they are in fact the same radio and all list other contries in the menu mode. Anyone that has done this mod please let me know how long you have had the radio, how often used and if you have had any problems.

James

(From Yaesu Tech Support)

Thanks for the update.. The "mods" available on the internet are not for the US version of the FT-920. Performing the software modification can (most often WILL) damage the CPU. It will need to be replaced in most cases. This is not covered under warranty.
Symptoms of CPU damage vary, but can not be reversed. If you've already performed the modifications using computer software on your US modelFT-920, I'd recommend sending it in for repair.

We are located at:

Yaesu USA
17210 Edwards Road
, Cerritos CA 90703.

Please send a note describing the problem and a daytime telephone number with the radio.

Best Regards, Mike Krueger - N6MIK, Yaesu Technical Support

Yes, I think there is. The bottom of the Radio Shack battery is NOT identical to those on the Icom batteries. I use an Icom BC-35 charger with aftermarket and Icom batteries that have the appropriate "holes" as well as contacts, but I saw somewhere that you can overcharge/overheat/start a fire if you try to charge the Radio Shack factory batories in an Icom charger. They apparently don't have the "holes" in the right place to program the charger for the proper charge rate.

As I mentioned before, the symptoms vary, but often include the inability to TX through the ham bands, (or at all) loss of features like DSP or key functions, or other erratic operation - like VFO failures and TX/RX off-frequency.
The microprocessor for each version (US, European, Japan etc.) is different and can not be downloaded with software that is not specific to that version.
From what I'm told, the software available on the internet was uploaded there by a European radio repair facility, and not under the control or direction of Yaesu. We will not release ANY modifications to the public via email, or internet because of the damage that could be caused. 73, Mike Krueger - N6MIK, Yaesu Technical Support

You have to replace one (or more) of the crystals to move the radio down. I had it figured out and was going to do this, until someone stole the radio.

Basically you change the crystal thathetrodynes with the synthesizer to produce the 145.xxx signals.

I guess I could dig out the manual and see if I still have the data.

4620. Selling Equipment in NG's Other Than rec.radio.swap

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: wplanck@netusa1.net
Message-ID: <75d0u6aao1@nnrp1.dejanews.com>
Source record: 122760
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.scanner

I don't know if it's wrong or right to advertise equipment in NG's other than rec.radio.swap, but ponder this: I advertised a Kenwood TS440S in rec.radio.swap only, trying to do as several have advised, and received one inquiry. Later I advertised the same radio in rec.radio.amateur.equipment and received 8 inquiries the next day. I guess it's somewhat of a handicap to advertise only in rec.radio.swap. Seems that a lot of people who don't read rec.radio.swap read the FS ads in other groups. I very much enjoy reading the FS and WTB ads in the other groups.

You might want to consider the Yaesu FT-920. It's an excellent rig with lots of features and you can find a clean used one for around 1K if you shop around...

As far as computer control goes, the FT-920 has a built-in interface and there are several third party software programs available on the Web that will work with it.

It's an old black-market CB amp. I would guess it might do around 60-80
watts. I doubt that there was ever a manual for this, or for most any of
these types of amps.

You can get them, but they may not be cheap.
And if the amp runs them together, a matched pair is best.

The only legitmate use for this amp (in the USA, at least) is for the 10
meter amature band(28.0-29.7 Mhz).
Make sure you use a good low-pass filter-most of those amps had lousy(if
any)filtering!

Well, it depends on who you talk to -

The 'most bang for the buck' rig used to be the FT-990...

Then the designation went to the FT-920...

Currently (from what I hear) the Icom 746 holds the title...

But remember, you could get a whole different answer from someone else - in comparing rigs, it's all subjective.

Thank you for reading. I would like to homebrew a "duplexer" to combine the 144 and 220 MHz outputs from my mobile rig into a homebrew dual band antenna. Anyone have any good circuits for making a duplexer network? Thought I saw one a while back. My guess would be a low pass pi net for 144 coupled to a 220 hi pass pi net. Second guess would be "coupled resonator" filters for each band.

Can someone provide info on just what each of the holes (or combination thereof) sets the charge to? I bought a hi-capacity battery at the Hoss Trader's last spring and the hole plate came off. I just stuck it back on but it occurred to me that it may have the charge rate set incorrectly now depending on which way the plate was oriented on the bottom of the battery pack. I have a BC-35 that I use. The battery does charge (had a 50/50 chance of getting it right....) so it may be OK.

4635. comparison of Icom W32A and the Yaesu FT-51R (high power)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: Matt Coarr <mcoarr@mitre.org>
Message-ID: <367A5232.F8A51CE6@mitre.org>
Source record: 122775

Can any offer a comparison of the Icom W32A and the Yaesu FT-51R (high power model)? I am looking at buying a dual band HT and these seem the best bargains, while still offering all the necessary features.

Any comments, positive or negative, about these are welcome.

Thanks,

Matt Coarr

Message-ID: <01be2a88$dab27580$6fa72389@WSTGMMYER.MONSANTO.COM>
Source record: 122777

I was given an old VHF radio that is set up for a police frequency. I am a volunteer firefighter and I also dispatch part time for the local pd. I am wanting to know how hard it would be to change the frequency on this radio.

It is called an OUTERCOM by Hammarlund Electronics Corp. of North Carolina. It's an old tube radio..... Does anyone have any information on this company or radio or where I can get a manual or help on this..... Many thanks in advance.

Gary

4641. FT-1000 upgrades: how to identify?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-18 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <367A58DD.14F88866@cswnet.com>
Source record: 122781

How can I tell if the factory upgrades have been made to my FT-1000? I asked Yaesu if they keep any kind of database but they didn't answer the question directly. My FT-1000 has the rev. 6 ROMS.

I have a practical reason for this question: My FT-1000's receiver is severely overloaded by a 1 Kw AM station on 610 Khz which is located about a mile away. The problem exists primarily when I'm on my 180 foot marconi antenna. Perhaps the PIN diodes or having the tuner work on receive (if that's a mod ...) would help me.

73,

Nick, WA5BDU

Yes, I saw this opinion, too. I wonder what test equipment was
used to measure this? I certainly haven't seen this in the 850 / 450's
I have used. If you truly, honestly want a radio with low "phase
noise" go get a Ten Tec or maybe the TS 830, it will beat them all.
But I would often prefer one of the others as I can hear things with
it that are not easy to copy otherwise. Take opinions for what they
are worth, and maybe consult the ARRL reviews (they do not agree
with the opinion you repeat here :-)

>FT-990. My buddy who buys and sells lots of gear said, noisy RX on the
>990.

Again, what kind of measurements were taken?

I have run into many, many hams who listen to the receiver on a
normal day on 40 meters and then tell me the receiver is "noisey"
or "quiet". Well, they are telling me about the 5 cent capacitors
in the audio circuit that define the rolloff for the high end,
and I can fix that to their liking in any rig for a few pennies,
it has absolutely nothing to do with weak signal receiver
characteristics.

>A guy in the club has a IC-736 that I operated for FD, CW (WB7QIW). It
>seemed to work fine, and he wants to sell it. I think he wants more for
>it than what a 570 will cost, and it's not as full featured. I think I
>remember hearing the 736's were dogs. Again I'm not interested in Fone.

Not interested in fone? Again, you might think of Ten Tec. Their
QSK beats them all, their "phase noise" measured in labs is lower than
the others too. Now, I have one and I like it, but I cannot find a
signal I can't copy on my TS-440 (though if there is strong QRM nearby
it certainly shows the Ten Tec pulls the signals through a LOT
better as far as my ears....) AND, if you check with the topband
boys (160 meters), many of them seem to prefer the TS 830 receiver
to most others, and the 830 is cheap-o these days.

I recommend you go and investigate the ARRL reviews and talk
to a few owners, then try using one of the rigs. Depending on what
you hear from a couple of hams is not always a good predictor of
quality radios :-) .

Hi Chuck

Icom IC-706 to AH-3/4 Auto-Antenna Tuner, control connections:

1. TKEY: low if the tuner is not connected,
the <TUNE> button is not functional; high
Rear panel view: if the tuner is connected. On receiving
a TSTR signal, the tuner may assert TKEY
1 2 3 4 low to key the transmitter.
_____ 2. TSTR: normally high; pulses low twice
/ | when the <TUNE> button is pushed and held
< O O O O | for 2 seconds to start the tuner; pulses
_____| low once when the <TUNE> button is pushed
momentarily to stop or bypass the tuner.
3. +13.8V @4A: switched by <POWER> button.
4. 0V: chassis GND.

The things that would help you most are a high pass filter with a cutoff
just above the AM broadcast band, circuit given in the Handbook, or
a notch filter tuned to the most offensive station, in this case 610 kHz.
If done correctly, the filters will be transparent to HF, but will strongly
attenuate broadcast signals and eliminate your overloading problems.

Source record: 122602

You might try various Radio Shack stores to see if they still have a close-out on the DX-300 (I think that's the right model). It's a digitally tuned general coverage receiver that originally sold for $249 and was closed out. I saw them for $199, then $129, then $89.95! It's a Sangean I believe and if you can find a store that still has them it's a terrific buy!

The 50 is easy. Do you have ADMS software? If so, there should be an option that lets you select the second button between open-squelch and 1750Hz tone burst. If not, go to menu item 21 (KEY) and select the menu. Then, select M/T (Monitor/Tone). Set the next menu to TCAL and exit out of the menu. The 2nd button (right under TX) on the side will be your tone burst. I would suspect the 8000 to be very similar- try checking its menus, etc. for the same kinda option.

There's a homebrew diplexer described in _QST_, Oct 1991. I built one from sub-optimal parts that works fairly well at 2m vs. 70cm. Formulas are included for other bands, but i wouldn't be surprise if 144 MHz and 220 MHz are too closely spaced for that design.

-- KD6PAG

P.S. If you can't get that issue conveniently, here's at least a description of the circuit, so you can see if it's worth the trouble to track it down:

http://ftp.barc.org:8080/pub/hamradio/arrl/infoserv/techmisc/diplexer.txt

Hello Steve:

Yes it is possible to run a PK-232MBX from a dumb terminal, But without the manual it is VERY difficult. About like running DOS from the c:\ prompt with a DOS manual.

You can use Lan-Link which is sharware the supports the PK232. You can also download the demo version of the new PK TERM 99 program at no cost. That program runs vhf packet in the demo mode. See http://www.timewave.com

Last, You might want to upgrade the PK-232 you have to the PK-232/DSP if you really get interested in digitial work

The manual is available from Timewave for $24.95 plus $5 S/H

4677. HG-10 vs HG10B Heath VFO

HG-10 vs HG10B Heath VFO ???

I am trying to remember the difference between these two Heathkit VFO's.
I know the time period for these was:
HG-10 1961 - 1966
HG-10B 1967 - 1976

What advantages might the HG-10B have over the older HG-10?
I'm planning to get a VFO for the DX-60B, and I wonder if anyone
has any experience/suggestions to share.

4678. Need help for IC751A problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-19 00:00:00 UTC
From: Young Kim <k6hm@wenet.net>
Message-ID: <367C22EA.748E5F49@wenet.net>
Source record: 122618

Hi,
I have a friend who needs some help on IC-751A. It works on 20 meter or higher bands but it has a problem in 40 and 80 and 160 meter band. It makes very fuzzy sounds in both transmit and receive, it cannot even makes CW sounds, it sounds like T7 in tone and lots of cross modulation. The other problem is that when transmit, the output power hesitates for 10 seconds or so before it puts out full power of 100W. This happens on good operating bands like 20 metrs and up. Anybody has similar experience?
Thanks in adavnce.

A couple months back my automobile was vandalized, and
my MCX-1000 taken. As a result the following items are
available for sale. --

Service Manual for the MCX-1000 VHF -- 68P02902A56
covers dashmount and remote models. Very good condition.

RIB. Don't own any more Motorola products, so is surplus to
my needs.

NEWish speaker MBTSN6032A Black long-cord version of
the standard speaker used with Micor, Syntor, MCX-100 etc.

Non-Motorola RIB to Radio cable. I have 2 if I can find them.

Locking mounting bracket. (it was not locked at the time...)
Fits the MCX-100 and MCX-1000.

Original software and manual, if I can find it.

Best offer or trade for ham accys. Please reply via email.

Source record: 122620

I'm a newcomer (tech plus) to the hobby of amateur radio. I have been using this unit for a few weeks now and have had no problems until recently. Is there any harm in rolling the VFO knob way past the "stop" indicators on the dial? I think my kids have been messing with it and not sure if that has caused a problem. I can't tune up on 10 meters. I can't even receive on 10 meters. I can receive signals on the other bands, but seems like everything is way off.

Thanks,
Chris / KD5EIA

4688. IC-270H SW and what mod does what?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-19 00:00:00 UTC
From: S <stubstad@nospam.ix.netcom.com>
Message-ID: <367C3677.AF2AFA15@nospam.ix.netcom.com>
Source record: 122628

Has anybody seen control SW for this radio, or is it vaporware?

The radio mod ftp info on Icom IC-270H shows how to expand UHF RX, add 3xx and 8xx-9xx RX and enable wideband TX at 136-174, 400-479 MHz by lifting two diode jumpers and opening up a resistor.

My question is...has anybody figured out what EACH of these three reworks does? I'd like to be able to open up 400-479 RX without having to pay attention to not transmitting out of ham bands.

For my use, I don't have much use for the two new FM RX bands that open at 320-399, 850-950 either.

BTW recent manufacture FCC unit remains ECPA legal with a gap in the 800 M band even with this mod so in case that's all someone wants out of wide RX, don't expect much from current production in US.

There is a cyrillic alpahbet Russian post earlier in the year about a model with wideband 50-1000 MHz RX. Wonder if radio hardware is there and just need delicate surgery, or if on chip ROM or mask programmed microcontroller stuff is different too?

Enlighten please,

Jim

The 530S is an older radio and only takes 120V AC. Ive gotten some email saying that its fine to use a modified sine wave inverter.Wish I could run directly off batteries but this radio was priced right so Ill work around the problem as they say. I already have a 500 watt whistler inverter so it looks like Im ready for the power to go off.

Thanks Paul K. N9EMX

4699. Re: How do u Clr FT530 memory locations?

I have a FT-530 (love it) and I haven't discovered a way to "clear" a memory channel short of doing a master reset. As I see it, you have three choices.

1. Perform a master reset.

2. Enter a default frequency into the memory channel, i.e. 144.000

3. The choice I would recommend and use, mask all memory channels not currently in use.

Louis

From: "James N. Roik" <jnroik@escape.ca>
Message-ID: <367B105E.FB8DC60E@escape.ca>
Source record: 122715

I use mine with a homemade return loss bridge. As you say, you use a signal modulated with 1 kHz and feed it into the bridge. One port has a standard 50 ohm load and the other goes to the device under test (dut). A diode detector goes to the HP-415. I calibrate the HP-415 with the port to the dut open, then connect the dut. The return loss can be calculated between the two readings, and then converted into swr.

This is a wonderful way to tune antennas, because you can sweep them with your signal generator over a wide range of frequencies. I use mine very often for this purpose.

Bob Nielsen wrote:

That's so true. I had forgotten about the Timewave units. I used to own a
DSP-599zx and the auto notch was *always* useful. I can see now how it would
come in handy with the FT-920 at times.

From: ignitron@my-dejanews.com
Message-ID: <75fk12flf1@nnrp1.dejanews.com>
Source record: 122723

Paul, Some years back I heard on the air,
a ham running a TS830S mobile using a radio shack inverter.
I believe the RS inverter was rated more like 300 watts. It
interested me because I have an 830, a rather large box to go mobile nowadays,
but his signal sounded OK and he had been doing it for a while. So I guess it
would work OK for your 530, which is also (2) 6146 and made to run on 115 VAC.
If there is a way to try it out into a dummy load with your hand on the power
transformer just
to check for overheating, that is the approach I would try.
Best 73, Don

I posted a response to the same question in rec.radio.amateur.antennas a
while back. I had a reference to an old 70's vintage QST with a construction
article as well. Unfortunately, I have packed away my antenna library.

From: Steve Ellington <n4lq@iglou.com>
Message-ID: <367ba877.0@news.iglou.com>
Source record: 122729

I would keep in mind that the yaesu is a brand new design subject to all the bugs of new gear while the Icom has been evolving for several generations and hopefully is bug free. My 706 Mk2 has been flawless. I would give any manufacture a year or so to iron out the bugs before buying a new design. I've been burned before like this. For the money the 706 is the most radio you can buy but of course if you pay 3 times as much you will get a better HF rig but the 706 will serve you well.

4728. R-390A Repro Nametags FS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-19 00:00:00 UTC
From: Tom Marcotte <marcotte@iamerica.net.nospam>
Message-ID: <367BAB81.7632@iamerica.net.nospam>
Source record: 122730

I had a bunch of repro tags made up for the guys who got rigs with no tags at all.
To avoid confusion with the originals, the tags are made with a unique, factual,
but generic design. The fit and finish are just like orig of this size. The size is the common short, fatter type. (Sorry, I don't have any of the long skinny type for the very old rigs).

The repro R-390A tags are 1" x 2.5" etched aluminum, and they read this:

RECEIVER, RADIO R-390A/URR <== this type is larger

DESIGNED BY COLLINS RADIO COMPANY
CEDAR RAPIDS, IOWA
FOR SIGNAL CORPS, U.S. ARMY

NSN 5820-00-538-7555 <== this type is larger

115/230 VAC 48-62~ 220W

The tags are protected by a peel off plastic coating for protection of the paint during shipping.

They tags are $9 ea, $16 for two, or $35 for five. Price includes screws, lock washers, and shipping.

Mike, you might try giving Norm's Rotor Service in Maryland a call. Maybe he's got a spare parts box with a meter that he could sell to you. Take a look at:

http://www.tiac.net/users/shiacawn/rotors/index.htm

It's worth the free look!

4731. Kenwood TS-830S Part Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-19 00:00:00 UTC
From: N1QWA@webtv.net
Message-ID: <21857-367BB5D4-5@newsd-112.bryant.webtv.net>
Source record: 122733

I am in need of a "universal coupling",as
discribed in the TS-830S service manual,
part # D22-0402-05.
This part acts as a connecting bushing
to join the two shafts together, behind the
LOAD knob. If anyone out there in DIGI-LAND
might have a parts rig about and would be willing to sell me this small
part, it would be
greatly appreciated.

Source record: 122744

there is a Hardware mod I saw on the Newgroup that also works but I have not
done it . Several guys said it works great. A few guys who purchased the FT-920
from
a local Ham store saw the salesman take the radio cover off and do a 30 second
tops operation and then the radio was opened up.
It may be cuttina diode etc but I am not sure.
Tim

4743. Need Manual for PK-232MBX

Newsgroup: rec.radio.amateur.equipment

Hi,

Name here is Denis, i'm a Ham radio operator call sign VE3HVS
I got two RELM portable HTs model RSP500 VHF 20 channels
I got no manual, no information or specification on them.
Need operation manual or copy of it.
Willing to pay expences.
Any help will be apreciate
Thanks Denis.

Try Jerry Troxel, WD9CNI. He has an excellent reputation and lots of
equipment. He gives a 90 day warrantee (I think). He's in Illinois. His
prices seem very good. I hear him on 3943 nearly every day. PH 217-247-2942

Yep, they're so full of features that 6 months after programming one for use on local repeaters, it's doubtful many can remember how to program them again without the owner's manual and a lot of headscratching LOL! If I'm asked to program in new PLs, offsets, and other repeater-stuff on either my ICOM or Standard 2m/440 gear, I have to go to the manual most of the time if I haven't done it recently. Sheesh, once in a while I sure miss some of the older but far simpler equipment!

Sounds like a case of PLL trimmer trouble. Check the
maintenance FAQ at http://www.icomamerica.com for the file
on model IC751A for details. Many Icom rigs have had this
failure. It's fixable.

> Thanks Paul K. N9EMX

I don't know the power output of your radio but even so, a 500 watt
inverter is a pretty small inverter and likely will not provide
sufficient current for any length of time when you transmit.

Sunspots! By the time Uniden and Radio Shack figures out that the sunspots are back, the cycle will be past its peak. So their sales will drop off and they will discontinue the radios again.

4781. FT: LUCENT PARTNER PHONE SYSTEM FOR RADIOS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: sourcebook@yahoo.com
Message-ID: <75j4pv$5fl$1@nnrp1.dejanews.com>
Source record: 122533

AT&T Partner R2.0 Contol Unit Configured 4-Outside Line X 12 Stations.
Features:
* Abbreviated Ring
* Automatic Line Selection
* Line Ringing
* Outgoing Call Restriction
* PBX-Centrex Mode
* Standard Telecom Device Compatible
* Privacy
* Last number Redial
* Recall
* Conference
* Drop
* Speed Dial
* System Speed Dial
* Loudspeaker Pager Connection through CO Line
* System is Used
System is compatible with the following Phones:
* MLS-6
* MLS-12
* MLC-6
* Partner 6 Button
SYSTEM **INCLUDES** THE FOLLOWING NEW PHONES:
(5) AT&T Partner MLS-6 Phones (white)New In The Box!
Basic Partner Phone with features for:
* 4-Buttons for outside lines or programmable features
* Hold, Conference, Transfer, and Intercom
* Built-In Speaker
* Feature Button used to access some features and to program the phone
* Compatable with PARTNER, PARTNER PLUS, and PARTNER II Phone Systems
Pec Code: 3151-04W
List Price: $230.00 Each
THESE PHONES ARE NEW AND WERE ONLY TESTED TO MAKE SURE THEY FULLY WORK!

I would like the following as a trade for these items, but let me know what you do have: 4 HT1000S, 8CH-16CH, UHF MID OR VHF MID PLEASE. E-MAIL ME. THANK YOU.

4785. Yaesu FT-50 Antenna Upgrade

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: jcsarp@aol.com
Message-ID: <19981220093159.21834.00001099@ng105.aol.com>
Source record: 122537

After owning and comparing many different multi-band SMA antennas on my Yaesu FT-50, I prefer the performance, style, size, and price of the MFJ-1716S. That's right .... the MFJ. I've compared it to the Comet SMA-503, Comet SMA-3, Diamond SRH-519, Pryme RD-9 SMA, Premier RD-98 SMA, and the stock Yaesu antenna. It performed as well as (or better than) the other antennas on the following bands.

2 meters
70 cm
VHF Business Band
UHF Business Band
FRS
Cellular
900 MHz cordless

The antenna comes with a rather ugly sticker at the base that identifies it as a MFJ-1716S. It is easily removed giving the antenna a clean slick look. At $16.95 each you can't beat it. Check it out.

John

4787. Heathkit Active Audio Filter FS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: lmarti49@linknet.net
Message-ID: <lmarti49-ya023580002012980849260001@news.idt.net>
Source record: 122539

Model HD1418 Active Audio Filter -- dates from 1988.

Assembled solid-state unit in mint condition. Attractive design. Has bandwidth settings for CW, SSB, and RTTY. The CW filter includes a tunable notch/peak filter with variable BW. The unit also has high and lowcut capabilities to get rid of "rumble" and "hiss". It has its own audio amplifier.

Very dark brown metal with red and white lettering--no plastic! Coordinates with the Heathkit rigs of the era. In perfect cosmetic condition. I packed it carefully away in a cool closet, along with several other high-quality items, when I changed my main interest from ham radio to computers shortly after I assembled it. You get the manual with it.

Asking $100

I can't understand why the manufacture's of the new VHF - UHF radios
seem to think that being able to only listen to one band at a time
is good. I think that most amateurs would rather have a radio that
they can listen on 2 and 440 at the same time. You might have two
repeaters that you listen for friends and with the new stuff coming out
this is not possible. Not very popular idea i would think.

4805. Re: Inverter @ Ham Radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: Paul <pjktg@itis.com>
Message-ID: <75jh73$2s2$1@news.itis.com>
Source record: 122557
Cross-posted to: alt.energy.homepower,alt.solar.photovoltaic,rec.radio.amateur.equipment,rec.radio.amateur.misc

The radio requires max 295 watts in transmit. 32 watts in receive with the heaters off. In ssb the average should be around 150 to 200 watt draw. The inverter has an 800 watt surge rating.
I dont think its like a pump motor where there is a large draw at startup.
Is this right?

Homebrew Paradise - everything you always wanted to know about radio homebrew (and distillation)

Yep, it has been a long time time since I posted an update, mainly because I have been quite busy these days. With up to 400 visitors A DAY you can immaging the amount of E-mail I am getting! One day I will post some of it. I have had a few laughs. For example " ... and can you design, build and send me the PCB foil patern and schematics for a stolen suitcase alarm?".

A few months ago my wife bought me a digital camera so I am now able to illustrated the hundreds of constructional projects on the homepage. The latest is an all CMOS 4000 series (3 chip) frequency synthesizer which can cover about 6Hz to 4MHz. There is also a 0.75uV PD sensitivity FM band receiver and even technical data on the ZN414 and ZN416 ICs (in PDF format). The URL? Sorry! There are three:

http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo
http://www.geocities.com/SiliconValley/3569/

I hope shortly to introduce a kit of parts for the TDA7000 receiver (no coils required) as well as to be able to supply a PCB artwork ready for making the PCB, in exactly the same way as the FM Wireless Microphone project. I'm working on it.

Will post another update when the next few projects are added.

Best regards Harry, SM0VPO

4808. Can the IC-7QA do DTMF?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: Seth Miller <seth.miller@NOSPAMworldnet.att.net>
Message-ID: <367D5131.A67E65D9@NOSPAMworldnet.att.net>
Source record: 122560

Can someone let me know if the ICOM IC-Q7A can do DTMF? I believe that the VX-1 can, although I know it is a PITA using the rotary switch on top). DTMF is is a requirement for me and can't find any online docs for the Q7A that answer this question... I guess I could search Dejanews but I feel lazy this morning. Any other comments concerning these two radios would be welcome as well...

Thanks -

- Seth

4809. DDS Signal Generator - only $119!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: tracy@bytemark.com
Message-ID: <367d5272.246614691@news.earthlink.net>
Source record: 122561

For one week only, (December 20 - 26) The PC-VFO DDS Signal Generator
will be available for $119, a $20 savings over the regular single unit
price of $139.

You can find information about the PC-VFO DDS Signal Generator at
http://www.bytemark.com/waveguide

In order to receive this special price you MUST place your order using
one of the following two methods --

1) TELEPHONE
Toll-Free at 800 679-3184 or 407 679-3184
STATE YOU SAW THIS NEWSGROUP POSTING AND REQUEST THE SPECIAL PRICE

2) SECURE WEB
a) Click the following link or paste into your browser:

https://cybermall.orlando.com/Mall/showdetl.cfm?&DID=6&Product_ID=888&CATID=23
(you must put the 's' after the 'http' to get to the secure site!)

b) Click the 'Add to Basket' button

c) Enter your information

d) In the 'Message' Field, enter
ONLY CHARGE ME $119 FOR THIS CARD

Your confirmation will still show $139 as the price of the PC-VFO, but
you will only be charged $119 plus shipping.

The CyberMall site gets VERY busy ... If your order cannot be
processed please use method 1!!

THIS OFFER IS NOT ADVERTISED ANYWHERE BUT THE NEWSGROUPS AND VARIOUS
MAILING LISTS.

Delivery will likely NOT be before the Christmas holiday unless
special shipping arrangements are made. Contact the sales department
directly for special deliveries.

Have a safe and fun holiday season!

4814. Help using MFJ-1278B in FSK for RTTY with Kenwood TS-570D

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: Brian Westfall <bw@mtwest.net>
Message-ID: <367D6E69.3D2794BA@mtwest.net>
Source record: 122566

I would like to be able to put my Kenwood TS-570D in FSK mode to send and receive RTTY with the MFJ-1278B. I have a prewired MFJ cable that goes from the MFJ radio port to the ACC 2 connecter on the 570D. I can send and receive RTTY using SSB. However, the filter setup is much better on FSK but I can not send RTTY in this mode. Somehow I need to use pin 8 of the flat IDC connector to do this. I am not sure what to do. Has anyone done this that can help me? I would greatly appreciate it.

Thanks for your help.

Brian

Hey there all,

Thanks for reading this. I'm trying to get my new PR-52 6-meter HT to receive out of the ham band. The literature and box advertises 40-54 MHz but I can't find the instructions to unlock this. Is it a software thing (like a speical power up) or do I have to physically modify it?

Thanks for your help,

Desmond, KC6VHG

4827. FT-847 Help/Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: Brian Opalka <Eagleone@starnetinc.com>
Message-ID: <367DA58B.7A2F86B3@starnetinc.com>
Source record: 122579
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Hello all,

I have an FT-847 that I want to hook up for HF digital modes.
Following the directions in both the 847's and the TNC's manual, I
cannot get it to work properly. I can get the radio to receive and
transmit, but on transmit, it will not send out any data. I have tried
several different ways to wire it, to no avail. (I did get it to work on
VHF Packet though.)
The TNC is a PK-232 BTW. Anyone running this combination that may be
able to help out? I guess I just need to know the proper wiring.

Thanks in advance and Happy Holidays!

Brian

4828. Kenwood TM-V7A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-20 00:00:00 UTC
From: bigron@i-cafe.net

Source record: 122580
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I have just ordered my TM-V7A and was looking over the manual, from Kenwood's FTP site, and have a question. Can you program the radio to transmit using one CTCSS tone, but receive using another? For example, a multi-repeater system uses the same receiving frequency with the same tone, but to access the different repeaters, you use different tones.

Another question, if I perform the expanded TX modification, does that effect how the radio behaves beyond having a larger range? Does it force you to enter split frequencies? Any other experiences with the modification?

Last question, anyone make their own programming cable? How would I make the cable? I'm sure I can find the parts and make my own for less than if I bought one from Kenwood. Also, while programming via computer, how many amps are required of a power supply when no transmitting is expected? I plan on bringing the radio in from the car every once in a while to make programming changes, but won't actually USE the radio out of the car.

Wobulator, cor that takes me back. A Wobulator is a swept frequency oscillator. Use of such will allow the alignment of bandpass filters to be observed.

I had a 440 as well with the same problem. Sent it back to Kenwood three
times after they said it was fixed. They had it for a total of one year.
Finally sold it broken for a song.
The Kenwood service department in California is a nightmare. I don't
believe they know how to fix the problem. I occurs on, I believe, the
930s and 940s as well. Seems Kenwood should have a fix for it by now but
don't hold your breath.

while holding down the squelch button, rotate the tuning dial.
this should give you several 'settings' for the squelch.
off/open, auto, 1, 2, 3 etc.
higher the number, tighter the squelch.
friend of mine has a t7 and uses setting '1'
i have a t8 and also use '1'

>
> Thanks in advance,
> Robert - KC0EJW
****

Rob,

Here's a quick way to see if the receiver is working well:

1) Connect the receiver to the antenna and tune for a
place in the band where there is mostly just a noise
level. Turn up the volume to a comfortable listening level
for the noise.

2) Disconnect the antenna. If the noise level drops
significantly, the receiver is sensitive enough.
If there is no change in noise level, you probably
need additional sensitivity (not gain, sensitivity).

Reason: The cosmic noise level should be 10-20 db higher
than the receiver generated noise all thru the
H F bands. If connecting the antenna makes the
noise go UP significantly, the system noise floor
is caused by the atmosphere,etc and not the internal
receiver noise. A more sensitive receiver will not
give an increase in S/N ratio, since the received
signal is competing with the atmospheric noise....

It's a simple test and is very reliable, PROVIDING, that your
antenna is working properly. Obviously a bad antenna will
not give the right answers for this test...

> Dan VE2BHN...

i don't have this problem with my t8 but since it is also the port
for cloning/pc cable, you should make sure there is no voltage present
on the line you are plugging into the spk jack of the radio.

I have had my TS 930s for about 3 years now, great rig, top of the line in its time, also has a built in power supply, so you won't need to purchase one. Plus the receive and transmit is almost as good as my new IC756. You should be able to find the ts930 for about 500 or 600.

Message-ID: <MPG.10e8a16244a0dd8398968e@news.infoave.net>
Source record: 122409

A blind ham friend of mine dropped his Icom IC27H off for me to look at. I am in need of a schematic for it before I'll be able to proceed. It's got a direct short somewhere; it smokes when power is applied. There is a resistor(?) that was removed by another fellow who tried to help, but didn't get the problem figured out. So- anybody out there have a scanner that can e-mail me the schematic? Please remove NOSPAM from my e-mail address or your reply won't go through. I'd prefer e-mail to snail-mail, because he's been waiting several weeks already. He needs THIS particular radio because it has the "little voice inside" that tells him how it's set up.

Thanks, -Web in Myrtle Beach, SC

Hello--
I recall seeing another wobbulator variant-- a loudspeaker-like device
with a variable capacitor plate attached to where the cone would go.

And, an electronic version: the Increductor, which used a modulator coil
to alter the properties of a tuning inductor. Kaye Elemetrics used
these in certain sweep generators.

From: HP Authorized Customer <joe@user.com>
Message-ID: <75lfslotd1@fnord.systemsoft.com>
Source record: 122425

A lot of the 10M rigs were 'one shots'. I.e. they were single
production runs designed to fill an order and then the line
would be shut down. An awful lot of these rigs were Uniden,
with variations for each customer that wanted a batch.

The problem was the market got flooded with the rigs. They
sold well, and now the 'independant' that turn out the low
production numbers are sill making the rigs, but there isn't
the competition of the major players like Tandy flooding
the market.

Tone is what you use to allow the repeater to acknowledge your transmission and rebroadcast it. CTCSS is what YOUR radio uses to open the squelch. Not many repeaters use CTCSS, so I am not sure about your systemt.

Anyway, you can have a different T and CT tone set. The way to go though, is to just input the frequencies as different memories. That's what I do for linked repeaters. I can just hit the up or down button as I drive out of range of one and into that of another.

Mods don't usuallly effect any other function other than you having to remember how to get into and out of the extended features and remembering not to transmit on a frequency you have no license to be on. <g>

As for the cable, be careful about making assumptions. I wanted to make one too until I saw the cable. Embedded into the connector shroud is surface mount circutitry, probably buffering/amplification. You would never even know to look for it. You could never duplicate this for what it costs for their cable. Bite the bullet.

During receive, the reciever assumes a 2 watt output with squelch open and is rated at 1.0 amps or less. If there is no audio, you can count on a lot less. Again, not sure of your question, because just about any 12v battery that would light the display, would work the radio for programming. Get the standard 12v gel cell from UPS's that you can pick up from any Ham in the know for 5 bucks. Or get a 12v supply from radio shack. You need 20.5 amps if you want to transmit on high power. The cheap one will work if you don't use the high setting.

Again...just because he doesn't care to ship it doesn't mean he should not offer it for sale to anyone interested. Perhaps the buyer would be happy to drive to his QTH and pick it up. It is not for you guys to question WHY he doesn't care to ship. If you're not interested in buying the thing, you shouldn't be flaming him in the first place. Find something better to do with your time.

I'd go for the FT840. The TS930 is considerably older than
10 years, closer to 20, and contains parts that are no
longer available. The 840 is newer technology and will have
a few features not found on the 930. I recommend the Tech
America Samlex 23amp switch mode power supply ($79.95) and a
low power manual tuner is no big chore to find at a bargain.
I believe you'd be better off in the long run.
The Kenwood TS930 was a good piece of gear, but I'd be
expecting it to reach the problem stage at any time. It's
almost inevitable.

Brian,

same rig here, same problems... (but now solved)

You need TWO cables, one for HF RTTY, etc on the "DATA IN/OUT" jack and one for FM operation on the "PKT" jack. Select via "Radio 1 / Radio 2" button on PK232.

See pages 16 & 17 in the manual.

Hi there :) I'm an electronic musician *seriously* searching for the
following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules -
"Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML,
Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion,
Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Space Echo
-Oscar monosynth
-Gleeman Pentaphonic
Maplin Patchable Synth

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Hi - I recently pulled an old Heathkit HW-7 out of a box of stuff I found at a garage sale a few years back, hooked it up, and to my amazement, it worked!! I actually made a QSO in a few minutes. The problem is that I don't think the receiver circuit in the thing could get me much farther that the guy across town who happened to hear me calling CQ. Any pointers to some modifications to improve it a bit would be greatly appreciated. Or any suggestions on how to build a better receiver. I'm new to QRP operating, but it seems like it could turn out to be a lot of fun.

Thanks in advance,
Robert - KC0EJW

I have recently purchased an IC-T7A and would like to know if there's a way to adjust the automatic squelch. I prefer the squelch threshold to be higher than what is programmed into this radio. When it is in scan mode, it seems to stop quite often on static. I'd rather set it higher to receive only the stronger signals.

I'm hoping there is some sort of trim pot inside the radio...?

FT847 MINT Condx!
Barely Used, But must sell for personal reasons.
NOT a pre-production model! I called Yaesu with serial number
and was told that it was produced less than 2 months ago!
ALL bugs are gone! Great for satellite, and excellent on HF.
Comes with Hand Mic and MD-100 Base Mic ($175 value)
In box with ALL original paperwork, manuals, warranties, etc....
Warranty good till NOV 1999. (Shows how long I've had it)
$1600 (Only serious buyers please)
This setup would cost you More than $2000 Brand new.
and this rig is just that.... BRAND NEW

4893. TS-830 filter question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-21 00:00:00 UTC
From: paul@pachena.ca
Message-ID: <75m24f$f7p$1@nnrp1.dejanews.com>
Source record: 122476

I have just purchased a Kenwwod TS-830S (thanks to all who replied). It hasn't arrived yet and I have a question re: SSB filters. I have a YG 455S1 2.4 KHz SSB filter and I am not sure which radios these were meant to be installed in. If the 830 is not one of them, is there a way to "make it work" in the 830? If not, is there a xstal filter for the 830, or is it such a good radio that it won't really benefit from such a filter? Thanks everyone. Merry Christmas and a happy year!

Hi all, I have some problems with the speaker jack of
my Icom IC-T8. When I plug a single mono or stereo plug
in the SPEAKER jack of this radio, the radio Feaks out!!!
Sometimes he start scanning, turn on the light, change the
VFO band, jump to memories... etc... etc... etc... I tried
tu plug a jack in the SPEAKER plug of my father's IC-T8 and
I got the same problems... Do you know WHY the T8 does that
and if it is dangeorous for the radio...???

Thanks,

Dan VE2BHN...

Radio Shack sells a book on marine radio. It's kind of basic, but I
suspect that that is what you need at this point.
At minimum, you should have a VHF marine radio. No license is required
in US waters; but Please Please Please learn the proper procedures for
using it!! Boat US has a video you can rent that tells all about it.

Next would be a single sideband radio for long range communications. A
license is required for this. Contact the FCC private Radio Bureau for
info.

A CB radio can come in handy in some situations.

Ham radio provides a more informal means of communication but requires
a license also. See www.arrl.org . There are many networks
of cruising boaters on Ham Radio.
Good luck, ans happy sailing

I'm wanting to make sure the power supply I use while programming the
radio, in the house, provides ample current for non-transmitting
purposes, just programming. I was wanting to know if I could use a scrap
power supply I have laying around that is rated at 1.3A. As I said, I
won't be transmitting while connected to it.

Hi Paul:

There is no "Slot" for the extra SSB filter in the 455 line for
the 830. Now, if you have an early 830, it has the MuRata
CFJ 455K5 filter in it. Not bad, but not good. If it is a
later model, it has the CFJ 455K12 in it, much better as far
as shape factor. Since the 830 has the YK 88S1 ahead of that
(in the 8.8 IF), it does pretty well overall in either case,
but the K12 is an improvement.

You can stick the YG 455S-1 in there, I have just done that
myself. You need to wire it in with mini cox and use
DC blocking caps. I used .1 uF disk ceramics, worked fine.
Feed the hot leads through a cap on each end to block DC so
that the diode switching works OK. (The ceramic filter does
not pass DC, the crystal filter does.) It will narrow the
sweet audio that comes from the speaker by a small amount,
some guys would stay with the K12 because it is really not
a bad filter for a ceramic. However, the crystal filter will
certainly help contain QRM on the sides, much steeper slopes
and ultimate rejection.

If you do this and have no need for the Kenwood filter board,
would you swap or sell it to me? I need one :-) .

A few years ago the FCC banned the import & manufacture of these
radios because they were too easily converted for use on 11 meters and
other out-of-band frequencies.

The only ones of these types still available are old stock and used as
far as I have seen.

4907. Crank-Up Tower/Moter Home Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-21 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <75mbb9nko6@clarknet.clark.net>
Source record: 122490

Hello. Right now my shack is here at my house and all of my antennas are mounted on the structure of the house, or strung between trees. But, I'm considering a career change that would require that I move every 2-5 years. So, I've decided that I motor home/tailor would be the best option, and the easiest thing to move every few years.

And I really would like to put up a tower at this motor home. But, since I will be moving every few years I can't lay some concrete and expect to get the tower back out easily. So, here's my question. Is there anyway that I could mount a US crank-up tower on the *SIDE* of the motor home and just crack it down every few years when I move? I would mount it using some type of metal clamps etc., but it couldn't touch the ground.

Now, is this at all possible to do with a motor home? Could I mount a crank-up tower on the side of a motor home safely and if so, about how high could it be? And if this doesn't work, could you suggest anything that
would? Any and all help would be appreciated. Thanks a lot for reading.

4910. Re: ICOM IC-Q7 power supply

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-21 00:00:00 UTC
From: llefczik@motown.lmco.com
Message-ID: <75mirc$tu1$1@nnrp1.dejanews.com>
Source record: 122493

I don't think it would be a good idea to use the top connector for power either. What I did was used 2 dead AA cells. I soldered wires to the appropiate ends from the external power source (I actually jumper to a connector so I can use the DC or AC adapter). I taped the other ends of the cells to be sure no current flowed through them (they are only used as spaces anyway). Thats how I get external power into the IC Q7.

I am using a Radio Shack "High Power" DC converter for the car that provides 400mA for transmitting. I would assume there is a voltage reglator inside but have not opened it up. Voltage seems constant at 3.3V.

I will take the warning of posible spike when starting the car and not turn off the unit until after the car is running. (I usually leave it on when I hop out and let it time out at 30 minutes if I am in a hurry.)

Thank for the advice.

I said no further communication and I meant it. Oh
well. Guess you better start filing an action in small
claims court. You waited six months during which
time you never said you wanted the antenna after
I told you to tell me when you wanted it and I would
get it down. Then, you apparently either got a better
deal on another antenna or simply decided you didn't
want mine. During that time my antenna was off
```

the market so I'm out the interest on my money for
those months as well. If you weren't such a jerk
we could have settled this without a problem but
since you chose not to do so then you'll just have to
bear the consequences.
No further correspondence from you will be read.
Merry Xmas
Tony N7BG

Can anyone tell me where I can find a "consumer's report" on
the Kenwood TS50S? I think one of the major ham magazines ran an
article within the last two years, but the library magazine indexes
didn't identify any. Comments from this audience would be appreciated
too, if any. Thanks & 73.

4920. Radio purchase dilemmas

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-21 00:00:00 UTC
From: ti2dll@iname.com
Message-ID: <75kilf$9ls$1@nnrp1.dejanews.com>
Source record: 122595

I have been thinking about getting an HF rig for a while now, and my current dilemma is between two radios I have the possibility of obtaining.

The first one is a Yaesu FT840, brand new.

The second one is a Kenwood TS930, used.

According to my calculations in order to set up a station with an FT840, it will take me about $1000, considering that with the radio I'll be needing a 20 amp supply and a tuner.

The TS930, on the other hand, will only take up about $750, considering that the supply and tuner are included.

The question is: are those $250 worth the price you pay in quality? The TS930 I can estimate is at least 7 to 10 years old, while the Yaesu is new out of the box. What's the useful life span of an HF rig? In other words, after how long does a radio become old enough to be considered not a good purchase?

Contact n3xbu@aol.com for more info!

The following are all collectible/working/very good or better condition and ready to ship just in time for the holidays!

Most of the Bakelites are selling for around $100 each. Email for specifics.

Silvertone 1949 brown Bakelite Am Broadcast Model 9000

RCA 1940 Model 65X1 Brown Bakelite

Emerson 1955 Model 812 Gray

Granco Model 704 circa 1963 AM/FM

Zenith 1958 Model 6B05 Beige and Cream

Philco Cathedral circa 1937 Model 60 Wooden, Dark Brown $235.00

RCA Victor Bakelite 1935 5 tube Midget

Motorola portable 1957 in red leatherette Model 5P32R nice/rare

Zenith 1941 AM/SW 5 pushbutton 5.5-18 MHz and BC Model 6551

GE Musaphonic 1954 Model 921 in gray plastique

Schaub Lorenz 1956 "Goldy 250" similar to Telefunken

Trav-ler 1941 small 2 knob brown Bakelite

RCA Victor 1955 portable light green plastic "His Masters Voice" emblem Model 6BX6

Truetone AM Model 0281

Arvin HI-FI 1956 Deco-style metal case very nice and unusual Model 3586 AM 14"x10"x10" app.

Telefunken Jubilate 1964 light wooden cabinet SW/AM/FM Model 5351W

Studebaker AM in-dash Car Radio circa 1963 Chrome with white knobs

I told you it was a big list! Read on for Ham stuff...

Vibroplex Bug 1960 marked on bottom "The Original, Standard" Gray wrinkle and Chrome some minor pitting of chrome, some chips on paint, overall good condition $75.00 shipped

Millen Grid Dip Meter with 5 coils in box looks good untested $50 shipped

12 volt Power supply like new, Basecom 10 $40 shipped

Hewlett Packard Freq. Counter Model 5382A up to 225 MHz Looks/ Works Great $225 shipped

A pair of Turner 454C Microphones Good condition Gray unamplified (plus two style) $50 shipped for both

Drake TR4-C with AC-4 in MS-4 Cleanest anywhere works marvelously $350 plus help with shipping

Cushman Model CE-5 o'scope/communications monitor/IF/RF sig generator/ Digital readout/ Works and Looks Great, no face cover, nice piece of test equipment VERY HEAVY better pick this one up...offers?

Collins Winged 32S1, 312B4, 30L1, 516F2 in case with speaker, 75S3 with ssb and narrow cw filters, all Collins Collectors Association very good condition, Looking Great and On The Air Daily $2,000 prefer pickup in Pittsburgh

Collins 0-800 milliamp meter in box, like new, don't think it has been used, marked Collins Radio Company $35 shipped

All items guaranteed working or money back less shipping if returned at your expense in original condition within 10 days

Items can be seen and used in Pittsburgh

Happy Holidays from Susannah N3XBU and Brian K3VR

> Mike
snip

I've never had any luck. TDR is a broadband time domain measurement
while swr is a narrow band frequency domain measurement. All the info
is there and can theoretically be converted with a FFT, but the accuracy
requirements make it impractical for most affordable measurement
equipment.
If you try to use TDR to measure the SWR of an antenna, you'll be
disappointed.
But you can use TDR to find opens/shorts or mashed places in cables with
great accuracy. You can TDR the wire to a wall-wart and learn whether
the open is at the plug or at the transformer end. Ditto for microphone
cables etc. You can measure resistor, capacitor and inductor values.
This is particularly useful for determining the tiny parasitic RLC of
components and interconnects.
TDR is a handy device, but not a replacement for an SWR bridge.

I would like to hear from anyone that owns a Yeasu FT-847.

I was thinking of getting one but iv heard of Bugs and other problems.
Auto tuner problems and such.

Any information or input would surly be helpfull.

Steve

>k5kip@wanweb.net

Take the covers off and look underneath. My book shows L34 which is next to the reference crystal as the frequency set. It is underneath, front center module, just inside the rear of the shield,and next to the crystal. This module has a hc-6 crystal, 3 square cans within a surrounding shield. With the radio front towards you, locate the three cables which go from the front edge of the board to the rear of the radio. The middle one is the 60 MHz (J9) which is the reference frequency. Set it to exactly 60 MHz, and that should take care of the problem.

Crazy George

Hi. I'm no expert on RTTY, but maybe you could clarify how you're trying
to send RTTY---

1. Are you using FSK or AFSK?
2. Is the PK232 stuck on either MARK or SPACE? Can you toggle the tones?

3. Do you otherwise have full control over the PK232 (can force the
receive mode etc.?) or are there other anomalies?

73 and Happy Holidays...

Wonderful Bal,

You've provide no direct link to your item, so I have to go search for it. Also, it would help to know the price, without having to go to ebay, unless I'm seriously considering it.

These two simple suggestions (pay attention everybody else) would also help make ebay faster since they would let people go directly to the item in question and would only be visited by 'pre-qualified' buyers.

Hang in there.

Message-ID: <gho7lvkp6zu.fsf@texas.gtri.gatech.edu>
Source record: 122352

Gentle Reader:

I have worked very hard to install a 2 meter rig in my Celia.
I gutted a cassette and used the housing as a mount and put the
radio very neatly into the dash. I put the antenna through the roof
and carefully routed the feed through the liner. The installation is
very unintrusive, except outside the SBB7 looks really silly in the middle
of the roof.

Now I need to wire a speaker.

I do not want to mount one of those little box speakers that are typically
used as external speakers.

An alternative would be to drive one of the front stereo speakers with
the radio. If I did this how could I avoid having to switch the speaker.
That is I wouldn't want my stereo left front amplifier pumping power into
my ham radio audio output.

Thanks for taking the time to consider my problem.

Ed

I concur that the software mod was discussed before on this very newsgroup. Also, there were people reported the said damage took place on their FT-920.

Being skittish about the damage I might have made, I went ahead with the mod about 1 year ago anyway. The mod was successful and the radio hasn't had any problem since I first purchased it. I have to admit that the mod was a risky one and I should not have done that. TX out of band is illegal anyway, even using the rig as a CB. At that time, I just wanted to see if it worked or not.

I am not endorsing the mod, nor encouraging anyone to do the mod. Who knows, maybe some hackers out there already added a virus to the software. This can be another factor not to do the software mod!

No! Don't even ask. I can't give this mod out. It's not like a hardware mod, which is reversable most of the time. I don't want to be blamed.

4935. Re: IC-T8 PROBLEMS WITH SPEAKER JACK

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: K6USW@webtv.net
Message-ID: <18864-367FA82E-23@newsd-163.iap.bryant.webtv.net>
Source record: 122354

Hi Dan, Do not plug any mono jack into the T8.
Both jacks are have a tip, ring, & sleeve connection. The 1/8 inch jack has the tip connected to rec audio, the ring to Data in/out, and sleeve to gound. The 3/32 inch jack has the tip connected to mic in, the ring is connected to a voltage, and the sleeve to ground.

The Data in/out is very sensitive to any contact with resistance or voltage or ground, since programing and the remote mic uses this input to control the rig. pluging a mono earphone in is causing the rig to see this lead to change from an open, to resistance of the earphone and then ground. Since this is not a contolled action it can be read to cause any remote mic function. The voltage on the 3/32 inch jack is about 4 volts and it is not a good idea to short this to gnd. It is used to power the remote mic accessories.

Get one of the new earphones with the right jack, or get the remote mic from icom. There also are some jack converters that change a three curcuit jack to two mono jacks, Radio Shack sells these, then use the jack that connect to the ring only. 73 Dar

P.S. I found these thing out building cables to connect the kenwood VC-H1 to my T8.

Hi Simon,

I would like to help you with this as I work in the same city as RACAL Canada. Is this the older SBX-121A (Spilsbury) SSB radiotelephone unit. Could you be more specific as to the location of V9 (I assume it is a tube?) i.e. what module is it on? I called Racal this morning and they couldn't locate V9 in their doc. Let me know and I will call them again.

Regards,
Paul

Source record: 122359

Don't know about the 707. I assumed the cable, and everything else was identical except for the limited display instead of the dot display.

Your 1.3A power supply will run the radio just fine for listening and programming. It may cut out or blow a fuse if you accidently key the mic.

I really recommend finding a 12V battery out of a UPS, any hamfest, swapmeet, or cb place usually has them. Check battery reconditioning/recycling places. I have 3 hams here in Raleigh NC that sell them. We get them from Exide and other sources. They are $5-10 and are small to large. One I have is 38AH and half the size of a car battery. <g>

You trickle charge the battery with a simple, cheap wall charger and run off the battery. I can run my rig at high power for several days on the big battery. The "mighty mite" chargers at wall mart work, although you might have to cut them open and adjust the trimmer for gel cell voltage, not car battery voltage.

A battery can deliver high current, so it is like a big capacitor. A high amp power supply is very expensive, but a battery is cheap and the charger is cheap. You use the cheap charger to feed a storage device like a battery slowly, then drain some of that charge off with your radio. What is expensive is a power supply capable of delivering 20 amps instantaneiously. Does that make sense? Battery power is the way to go. At some point, you can't get enough power from the ac line, let alone heat problems with a power supply that big.

In your shack, you get get several of those batteries ganged together, or a 70Ah marine battery, and run everything in the place for days! My 38Ah, runs several things, and 3 radios. No problems. The trickle charger is always on it cutting on and off depending on th e charge state of the battery.

: guide, but can only find ways to enter new info.

: How might I just delete/clear some individual locations?

: Any help appreciated-

You can remove a memory from being directly accessible
from the top knob, the arrow keys, scanning etc. If
you later decide you want it back, you can re-enable
accessibility and the memory location will still contain
its original contents. You can't "clear" it to 0, but
there would seem to be no reason to do that. You could
always enter 144.00, then take it out of service (the
144.00 might be useful as a flag to tell you that the
location is available should you decide you need it
later).

Anyway the procedure for, "masking" a memory, as above, is
definitely in the manual. I don't have my radio with
me, but it's something like hold the f/m key down for 2 secs,
release it, then hit 'skip'. Or maybe it's f/m - 0(Set) - then
hit 'skip'. Not sure. Email me if you can't find it..

I have experience with powering a TV with an inverter in the car while
using a 2M/440 FM transceiver. Those inverters generate a lot of
electrical noise, even affecting an FM transceiver. I can only imagine
what they would do at HF on AM/SSB. Plan on needing some good filtering...

wobbulator is wellknown in the countries using German instruments, some
other German words are Pegelmesser (Level meter) and Pegelsender
(Precise signal generator), usually the output level is in Neper, dBm,
dBU (0.775V) in selectable impedances of 75, 120, 150, 300, 600 ohm

I believe Philips used the term "wobbulator" for some AM IF sweep
equipment, I bought one just for fun at last vintage auction in Oslo.

Some old circuits used motor to rotate a capacitor (SCR-522), also used
some German Pegelsichtgeraete - one sweeping audio frequencies, and
another sweeping 10-1000kc/s in slow motion with oscilloscope screen

4950. Any FT-301 experts?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: "Peter E. Orban" <Peter.Orban@nrc.ca>
Message-ID: <367FEFE5.41C6@nrc.ca>
Source record: 122369

I picked up a FT301D some time ago at a hamfest.
I was told that the radio "needed alignment" and
it "lost its sensitivity". It also came with a
couple of parts to the input stage.
I barely powered up the radio when I got it, as
it did not come with a manual. Sure enough, the
receiver does not work, and when tuning, the
digital scale does not change. I have not even
tryed the transmitter yet.
I finally received a copy of the manual from Yaesu,
so I will have a chance to look into the radio in
more detail.
The VFO unit only has a black plastic cover on it,
and I am wondering if it also had a metal plate
underneath it, just like the other circuit
sections.
The radio must have had a rough life, even the
booster unit on the back of the radio was wired
up backwards!
Any comments, repair advice, like and dislike would
be appreciated, as I am new to this radio.

Thanks, Peter, VE3PEY

4951. $15 Balun vs $50 Balun?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: Mike Barrett <zootv@erols.com>
Message-ID: <367FFCAF.A8EFF2FB@erols.com>
Source record: 122370
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hi, is there a difference between the $15 baluns made by Van Gorden and the $50 baluns made by Centaur? How about between the $15 Van Gorden and the $25 W2AU? For reference, I'm looking on page 128 of Winter 98/99 Amateur Electronic Supply catalog. I am using Van Gorden baluns now and frankly I have had nothing but problems. When a strong wind blows (as is the case today), my swr goes through the roof. The change is from about 1.4:1 to over 5:1. The swr stays that way until I go up and move the lugs on the side of the balun around. I have 3 antennas, all with Van Gorden baluns, and all with problem I described above. So my questions are A) is there a difference between the cheap and the expensive baluns, either electrically or physically and B) would investing in a more expensive balun help to solve my problem with wind and swr. Thanks
Mike

PS - I know the connection between the antenna wire and the solder lug is good, but could the connection in the balun go bad (and on all 3)?

Just follow through and take him to small claims court. Ask for the $100
plus any expenses such as the filing fee that you can claim.

I'm wondering why so many guys buy the IC-706 and then seem to sell them fairly fast. I have a Mark II purchased new in September and am delighted with the rig. Everything else just kind of sits here turned off as the 706 does everything the other rigs can do and much more. So whats up? Is there a problem with this rig that I haven't discovered?

I think a lot of it has to do with wanting to get rid of them and get the next upgrade. I am fighting with myself on getting rid of my 706, purchased used in August, to get a Mark II. Not really interested in the new model G, don't do much in the way of UHF. I really enjoy the 706, does all I want plus. I travel by car for my company and having everythng in one box is a real plus. I presently am using mine in the shack since my other HF rig decided to go belly up. I would really like to get a Mark II and keep the original 706 for a spare rig. Happy Holidays, 73 Ed

4959. FS 2m Rig/TNC

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: dan@campbellsci.com
Message-ID: <34fc94b9.31077386@192.168.2.19>
Source record: 122378

Hello:

I thought I would offer a 2 meter rig and a PACCOMM TNC for sale. This would make a great packet station if you are interested. I have the interface cable all made up and I'll throw that in for free.

1. I have sitting in a box a Radio Shack 2m mobile that I received as a Christmas Gift from my brother who worked as a manager at a Radio Shack in Omaha, Nebraska. It is a Radio Shack model HTX212. It has been sitting in the box and brought out once to try it out. I have (3) 2 m mobiles (4 including this one) and (2) HT's. I don't need another one. The reason I am selling it is to buy a Kantronics KAMPLUS HF Data Terminal and I'm sure there is someone out there who would like a nice CLEAN and UNUSED 2m mobile rig.

Features:
5 year transferrable warranty (about 3 years left now).
45 Watts
31 Memories
6 Autodial Memories
Sleak aerodynamic black design...

With the 5 year warranty, taxes, etc it would cost about $400 new.

2. I have a PACCOMM 1200 baud TNC purchased about 2 years ago that I have used on and off. I paid $150 for the unit. It is also very clean.

Total investment $550.

If you are interested please make me a reasonable an offer.

73!

Dan

Save yourself money, and at the same time obtain a lot of
do-it-yourself satisfaction, by obtaining a two or three inch
diameter ferrite ring and wind on it 9 or more turns of 16 gauge twin
speaker wire. Conect the ends in an obvious manner to produce a
4-to-1 impedance, bal-to-unbal, auto-transformer.

Best ferrite core permeability is 200-to-300. But if you have no
idea what it is you have then just wind some wire on it and check to
see if it gets hot when in use. If it runs fairly cool at full power
SSB or CW morse then you have succeeded. If not then use two rings
side by side. Or change the ferrite material for a lower
permeability.

4962. Radio Noise

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: David <dr_green@bellsouth.net>
Message-ID: <aAUf2.1412$8Y4.2752222@news3.atl>
Source record: 122381

I just bought a Icom 2100H and installed in my 1991 Ford Explorer. I also have a commercial VHF radio installed, and have for a few years. My Icom has a lot of alternator whine, that varies with the speed of the vehicle. I was told my someon else to disconnect the antenna feed line and transmit from a HT close by and see if the noise was still there. It was not so that leads us to believe that the noise is coming from the antenna or antenna line somewhere. The radio also transmits the same noise. The commercial radio, even when using the antenna attached to the Icom, is crystal clear.

1. Was that a valid test to determine the source of the noise?
2. How do I fix it? I can't leave it this way.

I have already checked the ground, it is good. In fact the commercial radio and the Icom have the exact same plug, so I have even tried switching them without change. The Icom radio is definetaly the source of the problem as far as I can tell.

Any help would be nice!
David

4963. pros/cons of various hi pwr amp tubes?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: k7jy@aol.com
Message-ID: <19981222165712.24330.00000245@ng148.aol.com>
Source record: 122382

I'm curious as to the pros and cons of the various high power hf amplifier tubes currently being manufactured today. Which ones are the most reliable, best value, longest lasting, easiest to tune, etc. etc.? Specifically, I'd be most interested in knowing comparisons between the 3cx800a7 vs. 3cx1200a7 vs. 4cx1600b vs 8877. These seem to be the tubes used in the more common commercially available amplifiers these days. For example, why would I buy an amp that uses two 3cx800 as opposed to one that uses a single 3cx1200 (the cost of two 3cx800 is about the same as a single 3cx1200 for re-tubing purposes)? Your collective wisdom would be most appreciated. TNX and 73, de John, K7JY, Seattle.

Date: 1998-12-22 00:00:00 UTC
From: kd1my@banet.net
Message-ID: <75p9im$5vp$1@nnrp1.dejanews.com>
Source record: 122384

I think it is just the fact that some like it and some don't. I have an original 706 that I ordered the first day they went on the market. It has been mobile all it's life and I have been well satisfied with it. Have it hooked up to a screwdriver antenna and have made contacts to Europe and South America. The only fault is the lack of power on the 2 meter side. I am in hopes of getting a new MKII G when they come out.

Hi Bob...

I should have my head examined at my age for even inquirying about this rig...
but I am.

I've been off HF for years and have a hankerin' to get back on. I'll try to
educate myself a bit as to what you are selling, but it sounds interesting.

I've been pleased with my Alinco VHF gear for quite sometime, hope their HF
gear is as dependable!

FYI, your winning the rig reminded me of my "near miss" at the Montgomery, AL
Hamfest in 1961! I usually encountered a "bottom to top"
ticket pulling to "build suspense" at Hamfests I had attended prior to that
time. However, that fest' drew the "Grand Prize" first (a Collins KWS-1). I
hung in there and was awarded the very last prize, an ARRL Handbook!

While I'm waiting for an SWR/wattmeter kit to arrive in the mail, I'm wondering if an oscilloscope can be used as a TDR (time domain reflectometer) to measure SWR. It seems to me that it would be possible, but I've never heard anyone discuss using that method for amateur radio. Any experience, or thoughts on that?
Thanks

Jesse

That's a voltage balun. IMO, current baluns are better for ham
radio antenna applications. Unless one is specifically trying
to match a 200 ohm resistive impedance, a 1:1 choke would
usually be a better choice. IMO, a 1:1 choke cannot mask the
"wrongness" in an antenna system like a 4:1 voltage balun can.

Hi,

Something else you have to consider is (if you don't do your own repairs) is how you're going to get an older rig serviced, if and when you need to. I think Kenwood is still servicing the 930 - you'd have to check with them to be sure.

Rumors come and go about which manufactures have stopped servicing what radios - some are true, some are not - but it's another factor to be considered.

Just another 02¢ worth...

John

Thanks--I guess that's what I'll have to do. There have been some filter designs in recent issues of QEX and QST. I've hesitated because I currently take the lazy approach and let my ATU match my marconi on 160 and 80. For a filter to be effective, I guess I'll have to build a matching network (simple, I know) so the filter can see 50 ohms both ways.

4993. MX SPEAKER-MICS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: ilonka00@hotmail.com
Message-ID: <3680a254.65617653@netnews.worldnet.att.net>
Source record: 122438

SPEAKER-MIC'S FOR MX PORTABLES

We have a variety of speaker-microphones for
the /\/\ MX series portable.

NMN6130A
NMN6071B
NMN6138B

All in good-to-excellent condition.

$20 each + freight.
$150 for 10 + freight.

4994. Yaesu FT-51R/HP

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-22 00:00:00 UTC
From: Matt Coarr <mcoarr@mitre.org>
Message-ID: <367FA172.DDDD315B@mitre.org>
Source record: 122439

I am looking at buying an FT-51R/HP. If anyone could offer any advantages/disadvantages compared to the ICOM W32A, it would be appreciated. Is the FT-51R/HP worth the extra $80 over the W32A?

Also, I believe the FT-51R is a year or two older than the W32A. Does this have any considerable effect on features or performance?

Any comments please,

Matt Coarr

MX360 PORTABLES

We have a number of MX-T 800 MHz
portables N1336A.

These are MX360 housings with chrome
cover and imbedded black DTMF keypad.

Units are in good and operable condition but
are probably better suited for robbing
parts for UHF/VHF units.

$25 each includes shipping.

If you are looking to spend around $150, then buy new. The ADI 50W mobile goes for around $179 right now & includes a 2 year warranty. The Alinco DR-140TQ is about $10 more and gives you 7 character alphanumeric display and airband recieve. Both units include PL enc/dec.

========== You might have a pretty good surge if you have a lot of capacitors/inductors. My 500w Wistler will maintain that 800w surge for at least 30 sec., then blows the fuse. I replaced them with 30amp circuit breakers (couldn't find 35amp). If you are not going to add alot to your load, you may want to do that too. Mine does produce a lot of RF, interfering with the TV at the cabin. Putting it farther from the TV or antenna helps. If I was going to use it regularly, I think I would find a way to filter it (RF and 60 cycle). I don't see how rounding those square waves can hurt. I opened mine up to see if there was any damage from blowing fuses. There was more circuitry than I expected. But it looked like it was soldered by a three year old, so I decided that I wouldn't mess with the internals.

Cecil, I agree. And mike didn't state an impedance ratio.

But a 1-to-1 balun is even easier on a 2" or 2.5" diameter ferrite
ring, permeability about 200 to 250. Just wind 10 or 12 turns,
uniformly spaced, of 16 or14-gage twin speaker wire around the core.
Much lighter in weight, less expensive and better isolating
properties than a hank of coaxial cable.

: Any help would be nice!

Is there any chance you could find someone else locally with
another IC2100 to do an A/B test between the two radios?

My first guessing points would be bad electrical connections --
but I think you covered that with the commercial rig 'test'.
Second, I've never trusted those "butt-contact" in-line fuse
holders -- especially in uses involving high current. I've always
converted mine of that type to the "captive-cap" style, or the
automotive 2-prong plug-in style. Is your's the "flakey" style?

I don't think I fully understood some of your comments: With
the antenna off, and the squelch wide open, do you have (alternator)
whine/hash that varies with engine speed?

Maybe Santa will bring you a whole new vehicle -- making the
question moot... :-)

My experience is such noise is usually comming through the power line.
Especially if it is also there during transmit. Find a good power line
filter that has high enough current rating and connect it inline to the
radio. I've also had less problem hooking directly to the battery (make
sure it is fused close to the battery). The commercial radio may have a
lot better ripple rejection. I've had a couple different brands of
radios in my car. One was very bad and needed a filter and the other
radio had no noise at all with no filter.
Hope this helps.

Source record: 122265

Has anyone out there tried upgrading their Heath SB 220 linear amplifier with the Peter Dahl transformer (SB 220-3-7) ? Supposedly it fits in the chassis and delivers 1.3 amps instead of the original's 800mA. What kind of increased power output improvement can one realistically expect? Any complications result from the upgrade (e.g. blown components, spurious emissions, etc. etc.) ? Any experiences on this front would be much appreciated. Best 73, de John, K7JY, Seattle.

> Is this right?
>
> Paul N9EMX

It really depends on the power supply in the radio. If your power supply has an input transformer through which all the filter capacitors are charged, then the transformer will limit the startup surge to somewhere around 150% of the max power supply rating. On the other side of the problem, if your "modified sine wave" is more like a "modified square wave" then your input transformer will get very hot and you will probably need to reduce your drive to about 60% of normal, to keep it from frying.

I had the same problem with my TM-733A in my Ford Taurus. The noise was
reduced by remote mounting the rig in the trunk. I tried a power line noise
filter with no luck. I also have the antenna mounted on the rear window. I
think you have to get the antenna and radio far from the engine.

Hello--

For what it's worth, my copy of the Telefunken Laborbuch (dated 1958) includes a circuit for a "wobbler" for 10.7 MHz on page 224. The circuit consists of an oscillator stage and reactance modulator (both implemented with type EF800 tubes).

Even though I don't speak or read German, I consider this nifty little blue book a worthy companion to RDH4.

From: HP Authorized Customer <joe@user.com>
Message-ID: <75qnsq$di9$1@fnord.systemsoft.com>
Source record: 122284

The 27A and 27H were early 80's vintage. I bought a 4 digit serial
number 27A in the spring of 1985 if I remember correctly.

Decent rig, but the pigtail is a piece of crap. And the SO-239
connector itself was cut to the Japanese standard taper, and
some PL-259 connectors will NOT stay tight, they will vibrate
loose with time, so be carefull.

One of the internal regulators, the 8v if I remember correctly, is
a SHUNT regulator. REAL crappy design. Not for performance,
but for heat. Makes the rig hot. And the audio passband could
be improved.

Finally, when you transmit, the firmware in the microcontroller
'reads and writes' the memories. This means if you 'glitch'
the power while offset, the rig remembers the offset frequency.
That's why you suddenly find memory locations with the
repeater offset frequency in them.

ALL the radios in this series share these shortcomings. This
includes the 27A, 27H, 37A, 37H, 47A, and 47H.

The finals in the rig are a 'brick'. It can be pricy to replace, but
actually much easier than replacing a VHF transistor with tabs
under caps. Bad SWR seems to be 'cumlitive' in damage to
the final brick, so watch your antenna match.

Overall? Pretty decent rig for it's date of production.

It does not affect the operation of the radio. And it seems to perform
rather well
outside of the normal ranges.

> Last question, anyone make their own programming cable? How would I make

> the cable? I'm sure I can find the parts and make my own for less than

> expected? I plan on bringing the radio in from the car every once in a
> while to make programming changes, but won't actually USE the radio out
> of the car.
> --
>

There is circuitry in the programming cable that I have. It appears to be a
level shifting
circuit, it changes the +5v(or other) signal voltages to a level that can
be understood by
your PCs RS-232 port.

One other note on programming these radios. If you occaisionaly change
channel contents
or add a channel that was NOT previously programmed everything works just
fine. However, if you are making changes that include the removal of
channels you will have to reset the radio first. That's because the
programmning does NOT clear the radio first, but adds to what is

already there. So, if your using the four PM settings be sure to write down your settings before
resetting the radio.

Hope that helps,
j.motyl

Why d we hams pay more in the USA than Japan. The dealers simply move the product but offer no support if it breaks. Read the return policy from the Dealers (Fine Print). They says end it to Yeasu, ICOM, Kenwood.
Why not simply sell direct to the consumer like Ten Tec. Most guys simply order on the
Phone anyway (mail order) so why not get rid of the Dealers and pass the savings to the Consumer?? I will call this palce in Japan and see if he is willing to do Mail Order.

"Jim" <jbolinger@lintek.com>
shared these priceless pearls of wisdom:

->No, they are not used for instrument landings. They are used for
->navigation.
->
->Although they are sometimes used to help you find the airport when you
are
->flying in instrument conditions they are not classified as ILS equipment.
->This would be called a NDB approach, and
->are being phased out in favor of the GPS approach.

Does the term "compass locator" and "IAF" come to mind? Are you instrument
rated or even better an instrument instructor?

Flight Instructor as well as the rest of the alphabet...

Hello there,

Can anyone tell me how to solve the problem I have?
I tried to get back on RTTY recently but I seem to have a problem with transmitting.
All it does is sending out carrier only. Receiving is fine and packet works very well too.
I am using PK-232MBX, FT-1000 and Pakratt II program.
I used to work RTTY with exactly the setup without having any problem before.
I checked all the cables and thier connections and soldering.
Everything appears to be OK.
Any suggestion would be very much appreciated.

Season's Greetings. 73
Robin, VE3BI

5051. IC-Q7 Mod !!! again!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-23 00:00:00 UTC
From: eric_fre@hotmail.com
Message-ID: <75q85s$u3l$1@nnrp1.dejanews.com>
Source record: 122325

This is a copy of the original mod I developed back in June, It must have got lost on the web some where but here it is for all those people wanting to know. TX opens from 136-174 and 400-470! You also change the auto repeater offsets (which are useless any way!) and gain a couple of extra band breaks. TV channels and the VHF lo band is broken into two. Again I take now responsibility for this as it is a fairly major modification. I have repaired 2 from friends trying to do the mod with less than adequate manual dexterity!!!!

>>>>>>>>>>>>>>>>>>>>
Well every one this is a really scary mod to do to the Q7. It is really not for the faint hearted or any one that doesn't have a soldering iron tip less than 0.9mm.
I take no responsibility for these mods and am warning you that it does void warranty!
It is extremely easy do destroy something so be CAREFUL !!!! This is only a description of what I found. Use this information at you own risk!
OK now!
With the radio face down antenna pointing away (this is the orientation the unit will always be in when I refer to part location) remove the antenna and pull the knob off.
Unscrew the switch and SMA ferrules. Caution the SMA ferrule is sealed with a thread sealing compound.
Open the battery compartment and remove the batteries.
This will remove two screws. Remove them. Then the back can be lifted up and towards you.
This will reveal a main board and a sub(RF) board mounted on top of it.
Remove the single visible screw on the RF board on the right hand side.
There are two points where the shielding has been soldered to the lower board. On in the lower left corner above a ferrite inductor, the other in the upper left near the blue assembly of the switch. Carefully desolder these with desolder braid. (careful not to melt anything!)
carefully hinge the bottom of the RF board up till the connector in the middle of the board disengages. Then push gently on the SMA connector and pull the RF Board out.
Half way now.
Remove the screw on the right hand side central to the PTT and FUNC button.
And the one on the left just bellow the little shield. DO NOT REMOVE the two top corner ones they hold the LCD assembly!!!
Desolder the two speaker wires from the speaker.
Lift the bottom of the board out till the LCD clears its mounts in the case and pull the board out GENTLY so the rubber seal is not dislodged.
Turning this board over with the LCD now facing you there is position for 7 SMD diodes marked A or A2 on the right hand side just above the central

mounting point.
All have to be removed I had 4 in my radio!
The easiest way of removing them without damaging the assembly is to
desolder one end with desoldering braid and the while heating the contact
with the soldering iron lift that end with a small pointy screw driver
(0.7mm jewellers are good!). They just need to clear the board by a fraction
and then they can be easily reinstalled if necessary.
Reverse this procedure to reassemble and be bloody carefull!!!.
Cheers
ERIC.

You would be better off using a pair of dummy batteries(these are normally
used when a piece of equipment needs to be able to use NI-Cads and regular
batteries, even though the voltages are different).
These have a metal strip going through them-just cut it and add wires,
and you are done.
Another way is thin dowel rod(any lumberyard will have them).
A pair of round-head apolstery tacks and and wires, and again you are set.
Using real batteries is just BEGGING for problems-dead batteries tend to
leak eventually!

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both VSWR and % reflected RF power at all frequencies. It is designed to check the exact resonent freq. of any antenna, HF, VHF & UHF (10 - 510MHz).
It has a 4 digit freq. counter and an analogue meter, with a switch for 2 freq. ranges and 2 knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter in that it sees the antenna system exactly as the Transmitter sees it, plus the frequency is swept to see where its resonating. Makes trimming so much quicker and easier !

For further info E-mail RTE
at rte@iafrica.com

>value.

The 27H is an early-80's vintage 2m rig. Not a bad little rig to get started with but doesn't have most of the features of the new rigs - it's limited on the number of memory settings, repeater offset has to be manually controlled (not automatic nor is it saved with the memory settings), etc. I used one for quite a while and was satisfied with it. Of course, I got it for free so that made it all the more acceptable to me...

Only thing I recall being a problem was that the hand mike was very directional and you had to pretty much speak right into it (as opposed to holding at arms length). Otherwise it as a decent radio.

As for value, you might get $100 to $125 for it, depending on condition, etc.

5061. IC-726 SSB

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-23 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <75qt4d$l3h$1@arachne.labyrinth.net.au>
Source record: 122335

A query about the IC-726. I just bought one second hand, and have noticed
something a bit weird. My only antenna at the moment is a 5/8 whip for
2m, which is obviously practically useless at present but stay with me ...
On all bands, transmitting on FM or AM uses a few amps (8-14, depends
on the band) and the power meter on the rig moves up. I can get in to
some local 6m repeaters no problem; it transmits about 8W I think,
and uses about 4amps.

On SSB (either side) or CW, transmitting uses no power at all and
the power meter isn't deflected. This would worry me, except for
the above antenna -- I can transmit FM or AM with no antenna at all
and the power meter and power supply's current meter still go up.

My question in short: should I worry about this? Hopefully I can get/make
a 10m and/or 6m whip or dipole on the weekend or use a dummy load and
find out for sure.

I think the 2m 5/8 (about 1.25m in theory) shouldn't be TOO out of tune
on 6m (especially since FM works) so I am a bit concerned that SSB doesn't.

thanks,
Hamish

x-no-archive

Hello, I have the following for sale:

1) Collins 75S1 receiver. WE CCA good. S/N 261. With copy of manual.
$300 + shipping

2) Collins 32S1 transmitter. WE CCA good. S/N 2050. With copy of
manual. $300 + shipping

3) Collins KWM2 transceiver. WE CCA fair to good. S/N 176. No manual.
$450 + shipping

4) Collins 516-F2 power supply. WE CCA fair. Copy of manual. Needs
rectifier tubes (5R4 and 5U4). Case has a small dent in the rear.
Front trim ring looks good (no scratches). Untested due to no
tubes. $150 + shipping

5) Drake 2B receiver with 2AC speaker. Copy of manual. Receiver is
very clean -- a good collector sample. Speaker is average. Tested
on 40M and 20M -- very good receiver sensitivity. $150 + shipping
(thought this was sold, but buyer never replied to emails)

Prices are firm. No tire kickers please. All items from an estate.
I am willing to trade ALL (as a package) for a modern HF rig specifically Yaesu
FT-920, or Icom 756, or Ten Tec Omni VI. Would also consider other trades, but
only really interested in HAM GEAR (no computers, no cars, boat motors,
pistols, no tools, you get the idea).

Thanks and happy holidays,

Joe K7JOE
Portland Oregon.

High-end commercial TDRs (I'm talking many thousands of dollars here)
can give read outs in "return loss", which can be converted to VSWR by
formula or table. A wattmeter/bridge is easier to use and much-much
more affordable.

Peter I had basically the same problem on sone of the bands and the problem
was with the diodes in the Band Pass Filters. Here is a bulletin from Kenwood
concerning this problem.

==========

BULLETIN # 974
MODEL: TS-440S
SUBJECT: PLL UNLOCK DUE TO VCO #1

The TS-440S Control unit supplies band information to four circuits in
the transceiver. The circuits are the receiver front end Band Pass Filter
(BPF), the antenna tuner (AT), the transmitter Low Pass Filter (LPF),
and the VCO circuits on the RF board that are part of PLL #1.

There are ten receiver front end BPFs that are diode switched into
operation. If one of the diodes (D4-D23) becomes shorted or leaky,
the band information is felt at two BPFs at one time. The voltage going
through the bad diode will loop back to the VCO circuit, antenna tuner
circuit, and LPF circuit.

The unwanted voltage will then create one or more of the following symptoms:

A. PLL unlock (the transceiver only displays decimals).
B. No antenna tuner operation.
C. Low receive sensitivity.
D. Low or no transmit power output.
E. Distorted transmit audio.
F. RF feedback.

The most common symptom is PLL unlock. To test the diodes, remove the large shield on the RF board to expose the BPF circuits. Reset the transceiver by holding in the A=B button as the power is turned on. Even if the display only shows decimals, only the BPF for 14MHz should be turned on. Using a DC voltmeter, measure the voltage at coils L11, L15, L21, L28, L34, L40, L46, L52, L58, and L62. Only coil L52 should measure 8VDC. The other coils should read 0VDC. If one reads 0.5 - 8VDC, replace the two diodes in that BPF circuit.

COIL/DIODE/FREQUENCY RANGE RELATIONSHIP:

L11 D4 D5 0-0.5MHZ L15 D6 D7 0.5-1.6MHZ
L21 D8 D9 1.6-2.5MHZ L28 D10 D11 2.5-4MHZ
L34 D12 D13 4-6MHZ L40 D14 D15 6-7.5MHZ
L46 D16 D17 7.5-10.5MHZ L52 D18 D19 10.5-14.5MHZ
L58 D20 D21 14.5-22MHZ L62 D22 D23 22-30MHZ

REPLACEMENT DIODE PART NUMBER:

1S2588 OR 1SS91S: D4, 6, 8, 10, 12, 14, 16, 18, 20, 22
BA282 D5, 7, 9, 11, 13, 15, 17, 19, 21, 23

Time required to perform this repair is 1 hr. or less.

I have 572B's in my 811H. I have noticed a little more output on most bands, but probably the biggest advantage is the extra headroom as far as grid current, plate voltage, and drive power are concerned. If you want to do this for more output, it is not cost effective, given the limitations of this amps power supply. However, for increased longevity of the tubes and more forgiveness for improper loading it is probably an improvement. On the other hand, a 811 costs about $15.00 and a 572 is about $60.00. If you already have the 572's (like I did) go ahead and use them. If you will need to buy them, you should probably save your money.

I am looking for a 736R rig.

Just 2/440 will do just fine.

I do not need any extras with it.

Please email information to: johna@east.sun.com

Thanks, 73

5108. Marine TX on FT-50RD?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-24 00:00:00 UTC
From: valerie65@my-dejanews.com
Message-ID: <75ugl4$d5d$1@nnrp1.dejanews.com>
Source record: 122235

When attempting to transmit out of band on an unmodified Yaesu FT-50RD one normally gets an "error" message. However, I recently noticed that the PTT button does NOT generate "error" on the marine frequencies of 156.000 - 162.000. Does this mean FT-50 is capable of handling VHF marine channels???

Thanks for any info.

HI Steve

I have had a FT-847 for more than 6 months and it does not have birdies, it works great!! No audio problem, none at all, after having the on-off switch fixed after recieving the unit about a month oafter Dayton 98. Sent it back to RT Systems, they fixed it and no more trouble, I love the radio. I know you will like it too...

You are far from correct with the assumption that nothing useful occurs
below the broadcast band. There is a great deal of activity and an
attempt by ARRL to create a ham band there. Start by viewing:

5119. HELP with AM-6154 military amp tune-up procedure- May WTB: 8930 tube

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-24 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.10ecb4ccc2068fdf98968f@news.infoave.net>
Source record: 122246

I recently purchased an amp that -may- have a bad tube. How can I tell if it's bad? It's an Eimac 8930- obviously no reference will be found in any small tube-tester setting guide(I have one- it's not listed). I think it's equivalent is a 4CX-350. This is a 2m amp I'm trying to get running, and I get about 28 watts with 20 watts in. Possibly I need more wattage into the amp? UPS definitely dropped it, and I suppose -could- have damaged the tube.

I have no book for it- so I'm learning to tune it up "blind". I connected my MFJ SWR analyzer to it's input, and tuned for lowest SWR. Then I did the same on the output with no power applied. When I turned the amp on, it seemed to be very close to proper tuning. I found the "sweet spot" on the controls, and the maximum out was what you see above (28 watts out for 20 watts in).

If you have one of these, where do you find that your unit tunes, assuming you're using it for 2m SSB (turns counter setting at 144.200MHz)? This one arrived set to 57, but I found it seems to like 43 for 144.2MHz.

Any information would be appreciated. Thanks, -Web

Source record: 122248

Has the amp ben modified ? As they come, they are not setup for 2 meters. You have to change the input or you will get very little output power. I think it was made to take 10 watts of AM and give 50 watts out. The plate circuit has a small "capacitor" plate that needs to be removed so it will tune to two meters.

If it has been modified like it is suspose to, then look at the plate meter and see if it is set for around 90 ma of plate current while in the transmitt mode but with out an input signal. If not adjust the bias untuil it is around that value. Then apply some input power (about 1/2 to 1 watt) and see if the plate current rises. If not or not very much adjsut the input tuning controls untuil the current rises to a maximum. Then adjust the plate tuning (the counter dial) for a maximum output. It should be around 60 to 70. Then adjust the plate loading for maximum output. You should start seeing lots of output then. It only takes around 10 watts input to put out over 300 watts.

The above is not an exect tuning procedure, but should get you started. Try this website.

Message-ID: <368319FB.AD3CEE14@banet.net>
Source record: 122250

I have a Tektronix model 465 dual trace scope for sale.

+ 100 MHZ bandwidth, Dual Channel
+ Vertical Sensitivity -5mV/dv to 5 V/dv
+ Vertical Modes - Chan.1, Chan. 2, Add, Alt., Chop, chan.2 Invert
+ Full range calibrated delayed time base with precision delay time
control
+ Horizontal sweep speed: .5v/div. to .05us/div (with x10 mag.
-5ns/dv)
+ Horizontal modes - A, Mix, A Inten. B
+ Includes 1 probe

In very good condition with the exception of the outer case has
scratches on the bottom. Front panel is perfect. I haven't used this in

over a year and decided it is time to sell it to get some extra cash for

the holidays. Unfortunately I can not locate the manual.

The price is $500.00 + shipping

I made a charger cct and plug and fitted it inside my radio so it looks proffecional right down to a rubber plug molded from black silicon in a wax mold to plug the hole when not in use. this way I charge the NiMh batteries at the same time.

Cheers
Eric.
P.S. I would however recomend that people get a spare battery cover from Icom and build two batteries and the charger into it that way it is like a small battery pack! much neater option in hind sight!

Initial impression of VX-5R is terrific. It has great audio (tx and rx) and is well built and user friendly. Antenna has replaceable tip for 6m and has digital frequency display for AM/FM broadcast reception. It is slightly wider and taller than the VX-1R. Antenna is about 7 or 8 inches tall and you have to carry the extra tip. No case available yet.

There is no SSB or CW mode so HF (1.8-16 MHz) is AM/FM/WFM only as is 6m. It is 5W out on 7.6V and performs well. It has lithium batteries (can accomodate 2 AA alkalines) and a standup adapter for charging is avalable.

It looks and feels good, fits in a pocket or purse, and is a nice toy (underline toy).

Don I just Bought a JPS ANC4 this is a box which goes inline of the
coax and helps Null out those line noises.. I have the same problem
with old stuff If I have inline like a yaesu ft 101 e the noise
blanker does not work for this if I hook up my kenwood ts 440
when the Noise blanker is on it take most of it out I will be testing
the new toy I bought and see what it does ... they sell for 180.00 at
HRO or AES.... anyway thats my 2 cents 73's MIke

Bruce, they will all work, but I wouldn't mix them. The 6146W is the heavy duty tube. Most of us have a set or two laying around, so you should be able to find some pretty easy. Hope this helps, Bob

If you look at the dissipation ratings, you'll find that a 6146A
is a less beefy tube than is a 6146B.

A 6146W is a mil-spec version of the 6146A.

Therefore, a 6146B is really the proper replacement for the Kenwood
TS-830S, which calls for 6146B/8298As.

I suppose you could use a 6146B in a radio calling for 6146As, and you
can most likely interchange Ws and As with no trouble.

I am looking for someone that owns this HT and has been inside it! After removing the battery pack, I removed the 2 visible screws but was still unable to open up the unit. What is the trick? Is there a wattage pot in this HT? It is only putting out 4.5 watts while running on the DC power pack. It should be putting out at least 5 watts and I just wanted to see if I could tweak it a little, if I can figure out how to get in there! <S>

Thanks,

Fred Hamilton

5151. Kenwood TS440S Question....

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-25 00:00:00 UTC
From: smg3@Lehigh.EDU
Message-ID: <761ioi$1gr6@ns5-1.CC.Lehigh.EDU>
Source record: 122117

Maybe someone out there will be able to help me out with a problem with my rig. I bought this radio used and it seems to have distorted audio when I transmit (at least on SSB, not sure on other modes). Transmit pwr is fine and putting out all 100W, AT is working fine, and reports on the signal strength are fine as well, but several people told me that the radio is overmodulating. The knob abjustment on the exterior of the radio for mic gain doesn't seem to be having any effect on the audio quality, but does of course reduce power if turned down as expected. I am led to believe that a previous owner may have used the rig for CB and could have cranked up the gain somewhere on the boards. While the ALC is staying in the ALC zone on the meter, it is probably on the high side. One adjustment I have been experimenting w/ is the pot labeled "ALC VR1" on the final board. So, I'm just curious if anyone has any other suggestions as to internal adjustments that may have been tampered with, or please let me know if my line of thinking is illogical... I'm assuming that an internal adj for modulation would affect both AM (for CB) as well as SSB, but not sure. BTW, mic is the stock mic. If anyone has any suggestions/input, please email back to me at smg3@lehigh.edu, and it would be greatly appreciated.

Source record: 122158

Hi,
I have a Standard C628 which has had the extended receive mod done and this works fine. However, I cannot get extended transmit on this set, although I have followed a mod I found on the Internet which supposedly opened up the TX. (www.qrz.com)

Does anyone know of a sure fire way of doing this?

Thanks-I'm always keen to hear from 628 owners as well-are there any other mods around?

Source record: 122159

I agree the deal was incredible and several of my fiends were bumming out that they missed the boat. I will let them know they can try it in January. I wish Tech America sold other that Alinco and Standard. I suggeted they do a POWER BUY on ICOM 706 MK II G when they come out and blow the other US Dealers out of the Water. It appears most Dealers buy just enought to keep the unit in stock. If a Dealer could be assured of Selling a Huge Quantity then he/she could make a large purchase and pass some of the savings to the consumer. Perhaps if we gave credit card # etc and the Dealer would wait till he had X # of radio's on Order then finally Order them We could also get a deal but have to wait .

Boy, this must be top secret information as this is my second post without a reply! I know this is common information (but uncommon to me), and probably discussed many times on this forum, but some help would still be appreciated.

BTW, not everyone who modifies a radio for out-of-band coverage is running a pirate station, or a million watts on CB. A rig like the ICOM 706 with a homebrew attenuator on the output makes a nice poor-man's signal generator for aligning old tube radios.

73,
Andy

Hello...
I'm building my own carholder for my ft50 by using the FBA15 battery Case,
and I'm going to
use the cars batteryvoltage thrue the battery case.
I've read the chematics and I realized that both battery and ext.
voltageinput reaches the same point after the two diodes.
But what shall I be aware off when using an external powersourse(the cars
battery) on the battery current input on the radio (not ext. voltage input)?
What value is it on the zener D1021 (02CZ2.0X)?

Thank you.

You can build one or buy one! (Comet and Diamond both sell one).
LP filter on VHF side with cutoff around 160 MHz.....HP on the
220 side with cutoff around 210 MHz.....depends on how much
loss you are willing to live with and how much isolation you need.
(the Comet/Diamonds have 45db+ isolation and about .3db loss...more
than enough!)

5187. Noise Blankers

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-25 00:00:00 UTC
From: dsjkallen@aol.com
Message-ID: <19981225132348.27401.00001298@ng138.aol.com>
Source record: 122186

My current QTH has a substantial line noise problem due to the local electric utility. I have tried working with them to reduce or eliminate the problem (typically an S-8 or S-9 level), but yet to no avail. It is most likely due to dirty insulators or an arcing pole transformer behind my house.

Should I have no luck with effecting a "real" fix with the utility, I may have to look at acquiring a rig with an effective noise blanker. Most of my gear is nearly 20 years old and does not have truly effective noise blanker designs with adjustable thresholds, blanking widths, etc.

Does anyone have input on current rigs with effective noise blankers for this application? Any input would be appreciated.

73,
Don Allen W9CW

I have 8 MSA1023 BeO High power mmics. They are broadband 500mW each. Check the specs in their catalog. Price is $50 shipped for all 8. These are great for broadband push pull applications. I have used them in 50 ohm systems with good success.

I have 80+ of these relays. They are 24 volts dc, rf relays. THey have good performance up to about 1 GHz. They are douple pole double throw. I've used them in RF attenuator circuits, where you either switch thru or thru a pad using only one relay. They take about 20 watts at the low frequencies. They can also be used to switch in delay lines etc.

Price is 3 for $10
10 relays for $25
25 relays for $40
80 relays for $100

I would like to purchase a Handheld transceiver for
Ham radio with the ability to get am and fm radio
broadcasts, i.e. a broad range of unskipping
frequency ranges. I am new and applying for
my license and would rather go with this portable.

I know a tabletop gives best performance, yet can
anyone recommend a few handhelds I could look at
with good reception and features such as external
antenna, sufficient filters, etc. Thanks.

Steve.

Hi,
I have a very nice condition Kenwood TS-120S solid state 100W HF
rig. This rig operates 80/40/20/15/10 meters SSB and CW.
It has digital frequency readout, and all solid state (no tubes)
Was recently aligned in California and has clean bill of health.
Vintage is early 1980's.

Great as a backup or field day HF rig, as a first HF rig,
or as a mobile HF setup.

$295 + shipping

thanks,
Joe K7JOE

Ever thought about one of those CD-cassette player things? You
know, you put the cassette looking device into your in-dash player and out
comes the signal via your stereo speakers. You can control
the volume of audio right from the car stereo -- and if you have
an equalizer, you can even equalize the audio. I;ve done this
before with rental cars using an HT -- works very well.

indeed, several German books were available free or at low cost for
radio-amateurs. For several years I received the annual
"Siemens Halbleiterbeispiele". Also Telefunken 'Taschenbuch' 1967
(Pocketbook - R&#65533;hren, Halbleiter, Bauteile) is very useful containing
100pages Radio/TV design/repair information. and several hundred pages
of detailed information on valves and semiconductors. Philips also had
some pocket books, easy to find, but usually valve data was only 4-5
lines, not much useful..... But around 1970 and onwards Motorola
parts became the easiest semiconductors to buy for hams here, and very
much application notes were available free of charge(?)

Hi,
I have a dual band Kenwood mobile transceiver for sale. It is
the Kenwood TW-4000A. Covers both 2M and 70CM. Includes CTCSS
PL boards for both 2M and 70CM. 25W output on both bands.
LCD display, 10 memories, scan, search, etc. Comes with touch tone
Kenwood mic, original manual, radio, power cord. Works well.

Price: $275 and I cover shipping CONUS.

thanks,
Joe K7JOE

>I would like to hear from anyone that owns a Yeasu FT-847.
>
>I was thinking of getting one but iv heard of Bugs and other problems.
>Auto tuner problems and such.

There were some firmware problems in early units, that's been fixed in the more recent batches of the radio. There is no internal autotuner, so that can't possibly be a problem area. The optional external FC-20 autotuner does tie up the CAT port. That's a drawback, but the FC-20 has such a limited matching range that you probably don't want it anyway.

The radio does have a few other drawbacks. The stock filters are barely adequate, spring for the Collins filter option (at least the SSB receive filter). The narrow filter can only be used in CW mode. This is a real bug. The filter needs to be selectable in SSB mode too for AFSK RTTY and data modes. This should be fixed with a firmware change. The audio DSP just doesn't cut it by itself.

The radio very badly needs an IF notch filter in addition to the audio DSP autonotcher, or alternatively, there needs to be a way to disable AGC. A strong carrier in the IF passband desenses the radio even though the DSP filter makes it inaudible to you. The behavior of the DSP in CW mode is also annoying. I'd prefer it to work the same way it works in SSB mode.

My unit also has a quirk below 500 kHz. When tuning in small steps, there is a buzz noise, apparently as the synthesizer steps. This makes tuning across the LF area worthless. You can only hear a signal when you stop tuning. Of course sensitivity below 500 kHz reeks anyway, so this is really a non-issue. I don't know if this problem occurs in all FT847s or just mine. It doesn't show up on HF or VHF/UHF.

Otherwise, it is a very nice radio. It is a near equal of the IC706 on HF, if it had better RTTY filtering provisions it might be superior to the IC706, and it's a better radio on VHF/UHF. It really shines for satellite operation. Audio quality, transmit and receive, is excellent. It is a fairly intuitive radio to operate, unlike some others which require you to keep the manual handy. You'll be up and running with it quickly.

Over all I like the radio, but I'd like it a lot better if Yaesu came out with a firmware upgrade to allow use of the narrow filter in SSB mode. And I'd like it even better if I could disable AGC.

No. The only digital satellite work you can do with it is MIR's packet BBS.
For the other digital birds you need 70 cm capability, which the 706 doesn't
have (yet, the G model will have that when it becomes available).

Folks,
The replacement battery I was just sent for my camcorder is an NiMH and
I think the charger is intended for NiCD.

Should I assume I cannot charge this NiMH in the stock charger? Or is
there a way I could do it without damaging?

Or should I try to cobble something together with my Maha charger that I
use for my FT-50 batteries (I don't have their latest universal one).

If you can still find one, Radio Shack is closing out the HTX-202 for about $129. It is a solid, rugged, high performing, full featured 2m radio (incredible intermod rejection). At $129 it's a steal! They also closed out a RF amp for the 2m band at $29.95, again a steal!

5210. Re: Boo HRO cust service...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-26 00:00:00 UTC
From: Jeff Kilgore <kilgore@dev.tivoli.com>
Message-ID: <3685A443.E5AB54FD@dev.tivoli.com>
Source record: 122010

I dealt with HRO one time, about ten years ago. I ordered a Kenwood TR-751A, and received an obviously used and abused unit. Some accessories were missing, the case was scratched, several case screws were stripped, etc. I finally managed after some wrangling to get them to send me a new unit. This incident seemed even more stupid on their part, given that I worked at the ARRL at the time, and had the unit shipped to me at work. If they were going to try to pass off a used unit as new to me, they would do things like this to anyone.

I'll never deal with them again.

73,
Jeff, KC1MK

5211. TS-440 power adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-26 00:00:00 UTC
From: Jeff Kilgore <kilgore@dev.tivoli.com>
Message-ID: <3685A541.A0E50503@dev.tivoli.com>
Source record: 122011

My father recently gave me a TS-440 that he was no longer using, and since I have an overabundance of radios, I was thinking I might put it to dual use as a dedicated QRP rig and occasional signal generator. I do not have a manual or service manual for the TS-440. Is there an adjustment for setting the output power, and can this be safely turned down to the QRP level? Is the signal still clean at this level, and do the ALC and speech processor still work at this level?

Thanks for any info/advice.

73,
Jeff, KC1MK

>

I usually shop at Radio City here in the Twin Cities, but they were out of stock on what I needed, and I was in a hurry. So, a week or so before Christmas, I called an HRO outlet looking for an MFC TNC-MIC switch for my Kenwood/KAM+.

The first HRO outlet I called put me on hold for about 15 minutes, then asked what I was looking for. I told them, and they put me on hold for about 10 more minutes, before a guy came on and said, "What are you looking for?" I told him again, and he put me on hold for a couple of minutes, came back, and said, "We don't have 'em in stock, I'll order one for you, should take about a week." I replied that a week was unacceptable and that I'd look elsewhere thank you. He replied, "If you don't want the damn thing why are you wasting my damn time?" And he hung up.

Undaunted, I called another HRO outlet. Only one hold this time, about 5 minutes, while the guy went to look for the item I wanted. When he came back he said they had one in stock, and he'd be happy to take my order. I asked if he could ship it Next Day Air for Saturday delivery, and he said no, they'd get to it next week sometime. I thanked him and hung up.

Third HRO outlet I called, promptly responded that they had the item, and yes, they could ship next day air. I asked if they accepted a particular credit card (I word for that credit card company) and got a two minute tirade about what a rotten credit card it is and what idiots they would have to be to accept it. I suggested that he go perform an unnatural act with a fence post and hung up.

By this time it was about 2:30 pm. I called AES, got a super friendly guy named Gary who said, yup we have it, yup we'll take your credit card and yup I can get it to you tomorrow. He did. Amazing, amazing service. Almost as good as Radio City.

And no, I assure you, I'll never, ever try to purchase anything from HRO again.

73,
Doug

As the previous letter stated, the amp will not work on 2 meters without mods. I had to put on a relay which is used for switching the amp in and out of circuit, and also built a interface to allow that swiching from my FT 726R. For best results, I put in about 6-7 watts for over 325 out. The meter scale (output tuning indicator) on the front reads between 72 and 73 for proper tune up on 2 meters, but I am sure each unit will vary. Even if that unit was modified for 2, it will not work properly without the relay.

I have never owned one of these rigs, but have owned a few other Kenwood products. You may want to check on Kenwoods home page www.kenwood.net - they have an area where they list all of the service bulletins back to the TS 520S, where there are known problems. Maybe they have one listed for that particular problem - Hope this helps!

5217. Dave, you should be ashamed

Hello Friends and Neighbors,

I am saddened to report that our old buddy, Honest Injun', eBay Dave, has been practicing something shameful in his ads on eBay. Dave, say it ain't so . . . Why would you stoop so low? You are the one who is beyond reproach . . . A knight in shining armor . . . Mr. Clean.

Yet, you (apparently) hid secret messages in your eBay ads in order to have them seen by more and more and more people!! Talk about greed! Talk about bastardizing the system! This practice is more dastardly than posting eBay notices on the NGs!! It undermines the entire reason for having the search function!! It is un-American!! It has to be stopped!!

Oh, so you don't believe old Dave would do such . . . Then go to eBay and search for ANY one of the following:

ham radio transmitter receiver collins drake heathkit swan military surplus audio amplifier linear CB icom yeasu kenwood zenith philco crosley atwater marconi morse key vibroplex

I'll bet that you get AT LEAST 4 items and some of them will be entirely unrelated to the word that you searched for!!! This isn't right! It makes a mockery of the entire eBay system!! Why, it could even affect the stock price . . .

Dave, you should be ashamed . . . This is lower than low. You should apologize, repent and refrain. If not, then resign immediately . . . you no longer deserve the title of "MR. Clean"!!!

Depends on what's broken. It is a fine radio, and they aren't making
any more of them, so it is worth fixing if the fix isn't too expensive.
Try opening it up and looking, could be a simple fix you can do yourself.

= = = = =

Several years ago, our radio club used a Scout as part of a Jamboree On The Air (JOTA) week-end with the Boy Scouts. We were operating portable, on generator, with some pretty basic antennas. I thought the rig was excellent for that particular type scenario in particular. It is a good, straight-forward basic rig without a lot of bells and whistles to confuse the new comer. Likewise, even an experienced ham "out in the wilds" trying to balance operating and making sure lots of kids get their shot on the air, would find the Scout a very comfortable (leisurely, even!) rig to use.

The Scout got out fine for SSB and 50 Watts. TenTec audio is always good for getting out in QRP situations. The reception was also good, especially for the basic set-up. We didn't try to chase after much weird stuff, but were able to hear and work some DX during the week-end. From a couple QSOs in the CW bands, I suspect a QRP CW operator would do quite well with a Scout, a long-wire, and a couple batteries, on Field Day.

The use of modules to switch bands is a minor nuisance, but to the extent that it keeps the rig cost down, it is a good trade-off. Most people sit on one band for a period of time, so do not see it as a major distraction.

From my personal experiences, I have used and/or owned the Ten Tec Argonaut dating back into the 70's. I've always thought that was an excellent little rig, especially for QRP. I think the Scout is a leap forward in technology from the Argonaut 509/505 - digital vs. analog tuning, for one thing!

Hope this little snap-shot of info helps.

73, Dave K7HMP

I've done business with HRO Denver for years. Most of that with "John". He and the other HRO stores have always been super courteous, tuned in to my needs/wants and very accomodating. Their "inventory" as well as all their other stores inventory is right in front of them on a computer terminal and they are fully capable of selling out of the inventory of any of the stores and shipping from the appropriate store. Therefore I do not understand why any of them would ever put you on hold "to go check to see if what you want is in stock". No business can survive as long as HRO has with customer service reps like you have described in three separate outlets. I've also done business with AES since TERRY< W9DIA was answering phones in the late 50's. Frankly, I have never really had a bad experience in 40 years of Mail-Order purchases. I believe your experience is an exception and not the rule. There are some really great people out there on the phones in a highly competitive business doing a great job.

5233. New FT-50 Help Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-26 00:00:00 UTC
From: randy1038@aol.com
Message-ID: <19981226170008.01578.00000575@ng36.aol.com>
Source record: 122076

I just got a new Yaesu FT-50 radio (series "7N"). I have performed the solder pad mod and removed the surface mount resistor. I have extended TX (to 170Mhz and 470Mhz) but still can't change receive.

I have tried all button combinations listed and have even tried to modify the template.tpl file to allow for other band usage. Still not luck. When I do the lamp/ptt/knob-on combination and get the "band" screen, I am not able to change from A1. Keeping the knob pushed in for 1/2 second results in sending the unit back to normal operation instead of allowing you to change to a different band combination.

Changing the .tpl file to either "00" or "06" makes no change to the TX or RX characteristics. Either there has been another change to the radio firmware, or there is now another change necessary in the .tpl file (mine has a lot of additional code in it that others .tpl files seem not to).

Any suggestions?

Randy

You are very lucky to have had no problems from vendors over the years.

I believe this gentleman should have followed (he may have, I don't know) a little different path. I have had similar treatment from the Portland HRO and other vendors (not limited to Ham products). In all cases where I have taken the time, and successfully connected with the manager or owner of the vendor in question and explained why I was unhappy, appropriate steps were taken to correct the reason for my being unhappy, and that others wouldn't be treated the same in the future. Due to the competitive nature of most business ventures these days, it's unwise to allow unhappy customers to accumulate. I have found that in most cases management is thankful that you took the time to make them aware of the problem.

My most recent experience was with Duracell, North Atlantic Group. I was unhappy because one of their batteries leaked, and ruined a test meter. They pointed out that my handling of the situation contributed to the problem. Their solution to the problem was, furnish me with detailed technical instructions to minimize the possibility of similar future occurrences, and pay for the instrument. Besides returning me and those I associate with to the happy customer ranks, I was additionally impressed that the whole process took less than ten days!

My suggestion is to communicate with management at what ever level it takes to reach someone interested in addressing your problem as a first step. If unsuccessful, then resort to mediums of mass communication (the great equalizer).

Louis

>
My unmodified FT-50R, serial #6K112044, DOES generate "Error" if I try
to transmit on those frequencies. So perhaps your unit was modified,
or else a newer version of the firmware introduced a bug???

When the radio is "opened up", I believe that those frequencies are
among the ones that become accessible. Do you have another receiver
that tunes those frequencies? Turn it on and key up the FT-50, and
see if it is actually transmitting anything. If no receiver, how
about a frequency counter? See if it locks onto the frequency set on
the FT-50R dial when you key it up.

By the way, the FT-50R is not FCC Type Accepted for transmission in the
VHF Marine Band, so transmitting into anything other than a dummy load
puts you at legal risk, but you probably knew that.

Hello I read your posting on rec radio amateur and feel I have to respond. I live about 60 miles from the delaware HRO and I came very close to want to strangle the heck out of a guy who was their manager at the time I dont know his last name but for the life of me I still cannot figure out how he became manager! He was obnoxious and very rude. I spoke with another salesman there I think his name was rick and he never directly told me the guy was a idiot but he did get the message to me that this guy was worth staying away from. This guy literally emabarrased me because I wanted to buy a book that gave you nothing but the answers, It gave question and then just the answer so that when I would take the test I would recognize it out of the multiple choice. We had some words I told him were to go and I voiced my opinion to the other sales people. Next time I went back he was no longer manager, he is still there and excuse the expression he is still an asshole.
I know how you feel and your wife this is totally uncalled for. But then again It really is the reason that ham radio is going to the toilet.

dgsholar wrote:
>
> Just got a new Yaesu 847 and can't get the auto repeater shift to work
> in the 2 meter band (haven't tried it on 440 yet).
>
> It is enabled in the menu section. Can anyone suggest what I'm doing
> wrong?
>
Unless you got your radio in an unusual manner (e.g. bought it from
a dealer in Japan and shipped it to your home, etc.) it should have been
set up from the factory correctly for the USA band plan.

Confirm that menu choice 14, VHF-ARS is on.
Confirm that menu choice 15, UHF-ARS is on.
Confirm that menu choice 18, VHF-RPT is set to 0.60
Confirm that menu choice 19, UHF-RPT is set to 5.00

Get out of menu mode, get into VFO mode. Press ENT, 146.58 ENT.
The display should show 146.580.000, with neither the [+] nor [-]
repeater shifts showing. Pressing the REV key (above the 2) should
do nothing at all.

Press ENT, 146.76 ENT. The display should show 146.760.000 with the
[-] icon lit up above the decimal point after 146. Pressing the REV
key should change the display to 146.160.000 with a flashing [-] icon.

Press ENT, 146.01 ENT. The display should show 146.010.000 with the
[+] icon lit up above the leftmost zero. Pressing the REV key should
change the display to 146.610.000 with the [+] icon flashing.

If you don't get the results listed above, your unit is broken.

By the way, there is one "bug" in the Automatic Repeater Shift, shared
with the Yaesu FT-50 and the Yaesu FT-5100. If you tune to the UHF
FM calling frequency of 446.000 MHz, all three radios switch to minus
5.0 MHz repeater shift instead of treating it as a simplex frequency.

Good luck!
John (KB0ZEV)

Hi folks,
An announcement about the new HENRY reflector on contesting.com.
Here's how to join the group! We talk about anything related to HENRY Amplifiers.
Address a new e-mail to majordomo@contesting.com

In the body (NOT subject) of the message simply type subscribe henry

When you get the confirmation back, just copy and paste into a new e-mail the authorization information.

You will get another confirmation that you are all set and welcome to the list! Then, after you're all set-up just type henry@contesting.com to post new messages.

Hope to see all HENRY enthusiasts there!

I have been parting these sets for awhile, and this will be last call on both items for anyone who needs parts.

The Hallicrafters SX110 has the bandswitch assemble and coil section, and tuning capacitors left, (knobs, case, crystals etc. gone).

The Yaesu FLDX400 has lots of small chassis parts, final tank circuit parts, and bandswitch left, and the plastic dial window, dial and gears etc. is available (case,filter, trim etc. gone).

Let me know what you need or make an offer on the remains if you like.

Message-ID: <eFih2.7275$I51.1155579@newscene.newscene.com>
Source record: 122105

My two older boys will be getting their Tech licenses soon, and I'd like
your opinions on a good HT for a kid (they're 11 and 13).

I would like to stick with something cheap and basic. I'm considering
Alinco's DJ-S11T or even a DJ-C1 credit-card radio.

My preference would be a pair of Icom 2AT's, but I'm sure they want
something more 'cool'!

Just finished with the mod and it works great. Be VERY careful with desoldering the RF shields, very small space to work with.

I have an HTX 404 Radio Shack 440 ht. My son dropped it and now the display doesn't work. I was wondering if some one else had a similar experience? I haven't used it very much and I don't want my son to feel bad about it.

Is it worth reparing? (Please don't give me any grief about it being a Radio Shack radio. I worked great before it was dropped.)

Thank you in advance.

> there a way I could do it without damaging?

Yes - you should assume that, if your current (no pun intended) charger has no method of temperature sensing, then it is not meant to specifically charge NiMH cells/packs. (Charge rate and other factors come into play, too...)

The Maha MH-C777a will treat both NiMH and NiCd 4.8-12VDC packs properly. It retails for fifty bucks at HROs nation-wide.

I would disagree with Gary. I am using an ATAS-100 (on an FT-847)
with great success using a quad-magnet mount (no drilling to the
vehicle). Tunes up great on all bands between 40 meters and 440 MHz
and I get great signal reports. I place the magmount on the roof of
the vehicle for best results (I don't know about trunk mounting).

Happy Holidays,

Fred

5271. Boo HRO cust service...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-26 00:00:00 UTC
From: cabletek73@aol.com
Message-ID: <19981226001611.27493.00002002@ng-ch1.aol.com>
Source record: 122132

Had to toss my 2 cents worth out here if for no reason other then to see if others have had a similar experience.

With Christmas a short time away, I put my mind to work and came up with the one radio component I could use for Christmas, a drop in rapid charger for my FT50RD.

Wrote down the info on the MAHA charger on a piece of paper and left it hanging on the fridge with 2 places I knew of that would carry such an item and be able to ship to me within a day or so.

Along with the usual requests, the list went up on the wall.. And gave the wife some ideas of what I could use, etc.

It wasnt until later in the evening after setting up the Yaesu NC50 dual slot drop in charger that my wife told me of the experince she had dealing with HRO in Delaware that got me charged up enough to comment here.

She explained to me how rude the person she spoke to was for not knowing anything other then the fact that I requested a MAHA drop in rapid charger for a Yaesu FT50RD... (Stock number, etc)... And got a really strong feeling that because she had no idea of what it was she was asking for (other then whats listed above) that it gave the gentlemen permission to be short and rude with her request.

Knowing that this was the only radio related item on my list, she veared away from cancelling the order right there on the spot and continued on with payment information and further on to shipping info.

It was at this time that things got even more bent out of shape as the salesmen was told that the shipping address would be different then the billing address as to keep this item a sure surprise until Christmas, something I would imagine is done quite often around the Holidays by many companies.

That seemed to put a curve ball into the order, and the murmurs of the salesmens voice into the phone was quite unprofessional and rude.

I thought this was all too coincidental as not so long ago (2 months) I purchased a dual band mobile from this same outfit and had the SAME EXPERIENCE. Again, waiting, shopping around, etc kept me from hanging up the phone in mid order.

And incase you were wondering, yes, I recieved the Yaesu NC50 charger, not the MAHA as requested for whatever the reason may be.

Im dissapointed over the feeling that these people make you feel like they are doing you a favor and treating those who know LITTLE about radio rude and disrespectful to say the least.

Between some of the two meter antics that can be heard on the radio and the episode my wife had ordering a simple item I can understand more and more why people who might have a small bit of intrest in ham radio are turned away.

Dont worry HRO, Im not only complaining here, Ill be sure to call you this week to let you know of my level of disapointment.

R. Barton

Sorry to hear that- my few experiences with HRO have been very positive. Also, consider yourself lucky regarding the charger- MAHA will even tell you that most of the MH101s are pieces of crap- the NC50 is a MUCH better charger (at least from what I've seen/heard..)

5285. Help - Yaesu FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-26 00:00:00 UTC
From: dgsholar <dgsholar@gte.net>
Message-ID: <762kcp$1qk$1@news-2.news.gte.net>
Source record: 122146

Just got a new Yaesu 847 and can't get the auto repeater shift to work in the 2 meter band (haven't tried it on 440 yet).

It is enabled in the menu section. Can anyone suggest what I'm doing wrong?

Thanks

Dave

Hi All,
I would be very happy if somebody can supply me the schematic diagram and other tech data for
Braun TTV-1270 144/432 MHz transverter. Info was published in QST July 71, pg. 52-53.
I am ready to buy this unit for reasonable price. If you like to make me Christmas gift, I'll pay for the delivery.
Merry Xmas/Happy New Year!

Scott and Bob,
Thanks very much for the info. I have an 830 that I've had for years and never even paid any attention to whats in it, but it puts out about 135 watts. I bought a box of 'used but tested' 6146 tubes at a recent hamfest and they were a mixture of 6146s, Bs and Ws. If/when I need some, now I'll know which ones to try.
Thanks again and happy new year!
Bruce

That will fix it if done properly. Remove "ALL" the potting compound,
even under the components. After that repot it with parafin, not candle
wax. Align and the problem is gone!

That extra 50 watts is only going to gain you a couple of dB. Hardly
noticeable at the other end. However you likely will be stressing the finals
and surrounding components beyond their design limits. If they don't blow
completely, their life will probably be shortened...

Source record: 121957

I have a Dentron GLA-1000B linear, I'm trying to get it to work on 10M.
It comes from the factory
with a 10M tap on the tuning coil (the band switch has a stop that
needed to be moved). But it still
won't tune up. I was up on the Svetlana page and they mentioned a filter
"FL-1" which also has to
be removed but gave no specific information on finding it.

If anybody out there has the details on the 10M mod for the GLA-1000B
I'd really appreciate the info.

Hello:

A few years ago, Grove Enterprises offered a device for scanners which could only receive up to 512 Mhz to reach 800 Mhz by having you tune to 400 Mhz and the device would double the frequency.

Now, I would be interested in something like this, but to have the frequency doubled anywhere I wanted - say if I tune to 100 Mhz, receiving 200 Mhz traffic, etc.

Or even dividing the frequency - I'm listening at 400 Mhz, and want to hear 200 Mhz activity.

Any help hear?

Thanks in advance.

5309. SB200 Input Filter Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-27 00:00:00 UTC
From: Les Blades <lblades@sover.net>
Message-ID: <01be31b1$36b11560$4dca88cf@lbladesnpP.sover.net>
Source record: 121961

Folks -

I have a Heathkit SB200 amp that works perfectly. Amplifies just fine on all bands. But I have always had a little problem when driving the amp with a solid state rig.

The problem is one of input SWR. On 10, 15, & 20 meters (mainly) the SWR is up in the 3:1 range and varies as the TUNE and LOAD controls are adjusted during tune up of the amp. But I can never get the SWR below about a 3:1. The SWR into the antenna or load is fine. On the solid state rig, an SWR of roughly 2:1 or higher causes the output to fold back - an hence less drive to the amp. On 10 meters the output folds back so much that I might as well not bother running the amp.

My question is this: Is there a way to correct the input SWR issue on these amps? The individual coils are adjustable, although my playing with them has had little effect. Are there other input circuits that someone has come up with that will provide a better match?

I would appreciate any suggestions or help people may have.

Please email me directly as I do not check the newsgroup that often.

Email to: lblades@sover.net

Tnx,
Les (W1UT)

I'd open it up and start searching for a cracked trace on the PCB or
a solder pad that has lifted off the PCB. If it still can transmit and
receive, then I would start my search aound the LCD.

HOWEVER, be careful about changing either way among the three types on VHF,
as the stray capacity is different, and the neutralization, if any, may need
adjusting.
Crazy George

5314. FS: Kenwood TM-721A dual bander

Newsgroup: rec.radio.amateur.equipment

I am looking for UX14 computer interface for IC751a. Can somebody sell it to me or is there a circut diagramm available so that I can build it myself. May be there is some third party company manufacture the substitute. I have searched the internet. There are a lot of requests from people who wants to purchase the unit but there seem to be no supply at all. Please reply directly to me. Igor, UA9CDC

Hi Guys;
I have for SALE:
A radio shack Short Wave Receiver model DX-394, covers from AM broadcast to 30 mhz, am, ssb, cw. I do not have the manual or the stretch-out antenna for it but it does have an SO-239 on the back and it plays just fine, Condition is Better than Excellent, PRICE IS $150 + shipping from NY. It's very light.
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

Les;
If the input coil adjustment does nothing, then there is something wrong
with the input network. I would suggest verifying component values
first. You should be able to get the VSWR below 2:1 when working
right
Dave....

It's true. I installed mine last month and I'm very pleased. Install the other mod that comes with it too (Inrad will send you a capacitor to eliminate the hiss on CW). My 1000 MP is now the best receiver I've heard, and I've compared it to many of the best. Their filters are real good too. Best 73, John, K7JY.

5328. Improving a Dentron MT-3000A to a DTR-3KA

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-27 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01be31d0$28602220$a98492d0@Bit-Net.bit-net.com>
Source record: 121980
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I understand that that Dentron MT-3000A is essentially the
same as the higher rated DTR-3KA except for two features,
the DTR-3KA had a roller inductor and a fan on the back to
enable the built-in dummy load to handle more power.

I don't want a roller inductor, but does anyone have the
specs of the fan and what the power capacity becomes
of the dummy load with the fan added?

Thanks! & Happy New Year!

1. I'm looking to trade a Uniden SMH1525DT mobile for a Motorola programmable portable UHF/VHF. This is a VHF unit with a 150-174 split. The power output is 25 watts. This is programmable compact unit. It has leds for channels, scan and mon. It includes a power cord, mic, mounting brackets WITH screws. Visit Uniden at http://www.prc.uniden.com/htm/products_con_SMH1525DT_main.htm

2.
1 P110 UHF, HIGH(465-495) SPLIT, 2CH, OLD BATTERY, NO ANTENNA OR CHARGER P44QLC20A3AA 1 P110 UHF, HIGH SPLIT(465-495), 2CH, OLD BATTERY, NO ANTENNA OR CHARGER P44QLC20A3AA 1 P110 UHF, MID SPLIT, 2CH, OLD BATTERY, NO ANTENNA OR CHARGER P44QLC20A2AA- THIS P110 HAS NO TX BUT DOES POWER ON 1 GP300 UHF, HIGH SPLIT(465-490), 2CH, NO BATTERY, ANTENNA, ONE CHARGER P94YPC20A3AA - THE GP300 HAS A PROBLEM, IT WON'T START UP. IT USED TO WORK FINE BUT THEN RECENTLY IT WON'T POWER ON. IT MAY BE A BAD FUSE.

Please e-mail offers for all or parts of this equipment. Thank You.

>I dealt with HRO one time, about ten years ago. I ordered a Kenwood TR-751A, and
>received an obviously used and abused unit. Some accessories were missing, the case
>was scratched, several case screws were stripped, etc.
>73, Jeff, KC1MK

I bought an MFJ-259 SWR analyzer from my local Phoenix HRO. When I got it home I noticed the case and LCD faceplate were scratched. It was obviously not new. But it worked OK, and I expect after a few months of my abuse it would look the same or worse, so I kept it. It's still working fine so I guess that was a good decision. Now I know where the *bring back* equipment at HRO goes...to the next guy. But I guess that's the price you pay for the bring back privilege.

Lesson: Physically check your purchase before leaving the area...

Kenwood TH-205, it's an older radio(around 1987) with three memories, rx 141-163, comes with a cigarette lighter adapter, a KNB-3 battery(7.2v@1200mAh), a Maha MH-800 speaker-mic and the remains of the original PB-2 battery(long dead, and not likely to do much more than add to the shipping cost by a few ounces, but there is a charger if you find a working PB-2 or similair). And it's only $80 plus shipping.

5351. Help with Yaesu 5200

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-27 00:00:00 UTC
From: Don Vlack <k2dv@rochester.rr.com>
Message-ID: <3686E08E.E75B2C1@rochester.rr.com>
Source record: 122003

My FT-5200 developed a problem with the repeater auto-offset. Namely,
when you put in a frequency on the VFO, or add it as a memory channel,
you can assign the repeater offset, but when you key the mike, the radio
transmits on the displayed or "receive" frequency. The only way to get
it to transmit on a repeater is to program the radio as if it has a
"non-standard" split. I can live with it, but it's a pain! Any ideas or
help would be appreciated.
Thanks in advance.

Rod,

I also have to throw in my 2 cents and echo your sentiments...

Seems to me that HRO has dominated the Amateur radio market, as a result of what I will concede are low prices and free shipping on orders above $100.00. However, if you order on-line, the results are often unpredictable. When ordering online the last time, I requested an E-Mail confirming the order, and tracking number. I received neither...when I called the New Hampshire store to talk to the guy in charge of "on-line" sales, the personnel seemed annoyed with the call, and suggested that this was all too much work for them....HHmmmm

Calling the Delaware store is no fun either..the last two times I called, I was constantly put on hold, in the middle of my order, and the sales rep seemed again, to be annoyed with having to take my order. Everything was extremely rushed, as if he was trying to get in to the Guiness book for world's fastest order taker.

Rod, I guess it's time we look for vendors with more prices competetive to HRO, but with sales staff that take the time to "just be nice" and help the customer....

Sorry to hear that your wife was put through that ordeal, especially around the holidays....I suspect they talked her "up" to the Yaesu charger, when The Maha would have done just fine, for alot less money...

Bah, Humbug, and shame on you, HRO...

Dan

I have dealt with HRO for almost 30 years now and have had nothing but great service from them, less one incident recently with a "temporary" clerk at the Woodbridge store; I complained to my "regular" clerk who told me the guy no longer worked there. HRO doesn't carry everything so I deal with AES too, but usually defer to HRO if at all possible. They'll match prices from the other dealers and I will continue to buy from them--funny that we haven't had any negative comments about other than one or two stores.

Unfortunately, the lovely FCC forced yaesu to make the 50s
"non-freebandafiable (there's a word for ya ;-)" (aka. cell-modifiable).
You're pretty much screwed, unless you would care to try to redo the inside
of that radio. Personally, I'd live without it ;-)

I hear the same sort of thing on the Boston ,MA repeater concerning the Salem, NH branch of HRO. If it were only one or two guys complining I would ignore it. It appears that there are about 10 -15 guys who won't even go there and if they do they just look over the radios and go to the payphone just 50 feet away and order from another Dealer. It isn't a price issue either.

Hi,
Well, I'm giving it up in lieu of a new computer....

NEVER MOBILE

Yaesu FT900AT
auto freq. tracking tuner built in
modded for MARS/CAP
all the normal base model stuff....
no scratches or dents, works great!
Purchased new in 1995 from AES, (I even have the reciept.. over $1300!!)
Radio, manual, hand mike, box, papers to include factory mods, etc...
factory filters
Priced at $775, uship, No trades, please....
Please reply via EMAIL
Picture emailed on request and this one will have to be prepay, so
references available, too, from these groups even!
thanks for the time and space,
Randy, KC8CPK

Hi,

I have a couple gp300 uhf 2ch radios I'd like to trade for ht600's...
prefer the 6ch. units but will take a 2...
gp's are in decent shape... one ok, with scratches and some wear, ($220) the
other a bit rougher to include scratches and a chip... ($200) rx/tx fine on
them... any interest?
or sell for $410/both, uship.
please email!
thanks,
Randy

Then your antennas don't really need much tuning. :-)

The tuning range of the FC-20 is a bit less than 3:1. That
won't tune many antennas, including the popular G5RV.
It will "touch up" the match to a nearly matched antenna.

HRO clerks are instructed to answer the phone by the third ring.
When they have a lot of calls coming in, you get put on hold while
they grab the next call and put it on hold. They'll also answer the
phone in preference to dealing with a counter customer (which
is *really* annoying since you've made the effort to show up in
person at their store).

Anyway, this tends to make the clerks rush orders, because
they've got to get back to the other customers that they have
on hold before they hang up in disgust. So don't be surprised
if the clerks are a bit harried at times, especially at the Christmas
season. The clerks also aren't paid all that well, so if you get
Radio Shack type service, don't be surprised by that either.

This is an unfortunate aspect of a high volume low price 800
number operation. Overhead has to be kept to a minimum,
so customer service suffers. If enough people complain,
and back their complaints by taking their business elsewhere,
things may improve. But expect prices to go up to pay for
that improved service too.

Compared to some other discount operations, like CompUSA,
HRO is the epitome of service and courtsey. (Don't get me
started on CompUSA.) If you really want good customer service,
then you have to deal with a company willing to pay for that
service, and that will be reflected in the prices that they have
to charge to keep the doors open.

Some of the smaller dealers aren't as busy as HRO of course,
and you'll get more attention from them. So you might want to
call some of the smaller 800 number outfits if you want to be
treated better. But they may not have what you want in stock,
and their prices may not be quite as good. You get the level
of service you're willing to pay for, and most hams don't seem
to be willing to pay much.

I'm as guilty of the shop to save $5 on a $2,000 purchase
syndrome as the next ham, so I realize that I'm part of the
problem. That makes me tolerate the treatment I get from
the harried clerks just a little bit more than I ordinarily would.
But I still find it a bit frustrating at times to be standing there
waving money and not being able to get anyone to take it
because they're all tied up on the phones.

My favorite dealer is The Ham Station. Dan has never failed
to treat me well, and his prices are close to the best too. But
he doesn't always have what I want, so I still deal with HRO
and AES. (I still go into CompUSA too, but I don't like it.)

The credit card radios are "cool" but they're also fragile. I'd go for
something a bit more robust for the boys. Go Radio Shack if they
still have any HTX202s in stock. That's as close to a 2AT as you
can find these days. Or consider the DJ191. That's another good
rugged basic radio. The DJS11 is Ok if you want something a bit
smaller and cheaper, but I don't like the antenna setup on them.
That's going to come loose or break, and it is the devil to fix.

Icom, Kenwood, and Yaesu also have some basic radios, but
they'll cost a bit more. That may be worth it if the accessories
will interchange with *your* radio. That could end up being a
better bargain. OTOH, you may not want the boys messing
with the accessories for *your* radio. :-)

A NiMH charger will *almost* fully charge a *good* NiCd battery. A NiCd
charger can overcharge and possibly ruin a NiMH battery.

5400. ft-50r not working can you help?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-28 00:00:00 UTC
From: Scott Thayer <n7zti@pacinfo.com>
Message-ID: <36884CCA.CDEBECB9@pacinfo.com>
Source record: 121810

That last time I used my FT-50, it worked just fine, that was about 2 weeks ago, it has been sitting on the shelf since then, I have had it about 2 years, and I REALLY needed it today, we were having some flooding in the area, when I turned it on, everything seemed to be working fine, when I transmitted, the display went blank, and the green light came on showing that I was receiving a signal, or that my squelch was open, and the power button no longer function, the only way to turn off the radio was to remove the battery, and every time I put the battery back on, the radio comes on, the display stays on for about 5 seconds, then goes out, and it will not receive or transmit. I am assuming that there is not a simple solution for this, other then to send it in to Yaesu to see about getting it fixed, if that is the case, is their anyone out their that yould be willing to buy a NON working radio? I have never really been happy with the radio.

Thanks for any help anyone can give me.

Scott (N7ZTI)

I totally agree.

They do make a great second radio! I just picked up one of the little
dual-banders, and it works fine within ~5 miles of the repeater. There
is no comparison in performance with a full-power HT, however. Direct
entry of frequencies is not offered on the little rigs, and this can be
sorely missed if you are trying to put in a new repeater on the fly.

Hey Pete you should learn not to hold back. Go ahead tell us how you really feel! :-)

Your approach reminds me a little of the cartoon where the customer returns manager is remarking to the lady; "Well how about if we let you keep the item, return double your money, hang the offending salesperson by the fingernails, beat him/her unmercifully after they drop to the floor, and then shoot what's left. Would you be satisfied then"? :-)

My guess is that the reason you have no problems with HRO stores you visit, is that you have them terrified. Kind of like the mouse that has the task of serving dinner to the collection of stray cats in the alley. :-)

FWIW I have had a few unhappy dealings with HRO (among others). But the situations were quickly corrected upon notifying the store manager.

I also have a MAHA Universal Charger. The only problems I have experienced were discovered to be of a "Pilot's error" nature. Mind you, I am not implying that is the case in your situation.

I also have other products from them. The one time I did have a problem, the effort to correct it exceeded my expectations. No I don't work for them. Other friends of mine from this area have experienced similar response from their customer service department.

I have saved your post for future use if some company really pi____ me off.

Louis (hoping you never get mad at me) Bybee

Anyone have any experience with the .41Mag on feral hogs? I plan to hunt 'em right after deer season closes, and expect to be using a Sierra 220gr FPJ, with the Hornady 210gr XTP as an alternate/backup.

What do you think of these for terminal performance?

Please provide personal observations with your opinions.

Thanks,

I don't own a Scout but I have had good luck with Ten Tec thru the years, especially with their customer service. In spite of that, I had a QSO on 80m CW just the other day with a ham who was using a Scout and there was a quite noticable chirp on his signal. It wasn't the unstable oscillator kind of chirp but one where the frequency drifted up a few Hz over a period of a couple seconds.. When he stopped sending for a second it would move back.

When I mentioned the problem he said he was aware of it and had not been able to get Ten Tec to even admit there was a problem, much less fix it.

Like Dave says, hope this little snap-shot of info helps.

If all else failed on power line noise, try one of those noise cancellers
from MFJ or JPS. I have 2 of them and the power line noise disappears
like magic at my QTH. Just my 2 cents worth.

Best 73!

5414. Re: Dentron GLA-1000B 10M Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-28 00:00:00 UTC
From: hasan schiers <schiers@netins.net>
Message-ID: <768f2d$td9$1@ins8.netins.net>
Source record: 121860

If it's like some of the other Dentrons I have seen the FL-1 is an input filter...basically a trap that prevents any drive on 10m from getting to the tubes. Look at the input side and I bet you will find a parallel tuned circuit in series with the RF drive (input) connector.

If it is a series tuned circuit it might be shunted across the input...would server a similar purpose.

You might get lucky and see a potted unit with FL-1 stamped on it! In either case, remove FL-1. If it is a series connected device, put in a shorting wire. If it is a shunt connected device, just cut it out and you should be set.

I think I had to do something like this to a Dentron amp, many, many years ago. 73

Hello..
Need part number 63-561 5 position rotary, wafer switch for the SB-220
Amp. This is the switch located directly behind the band switch.
Please email me with condition and price or a source for this part, if
you know of one......thx...Lonnie (NT6B)

5416. ICOM EX-243 Keyer module

Hello, I am still looking for one of these modules (card).

There can't be much on it, as my manual shows 2 slide-on connectors to it. 1 has 3 pins and the other has 4.....total of 7 connections to it.
Does anyone know what IC is used on this thing? If the chip is not proprietary,and can be found, does anyone have a schematic for it ?
I will try to build one.

Thanks for your indulgence,
John

Yeah, they also include a handful of loose hardware to rattle around
inside at no extra charge too. :-)

Mine has a few, but not many and not loud, no worse than most
superhets. In the QST review they said that their first one was
birdie filled, and it was the DSP that was causing it. Apparently
had something to do with flux left on the board causing some sort
of instability. Supposedly, clean the crap off the board and it quiets
down.

While the Ten Tec Scout does have its odd points, most of the Scout Owners just don't want to part with their units. You can get a rig that can perform better than a Scout, but you'll have to spend a lot more money. I enjoy running my Scout and would never think of selling it; if I were to replace my Scout with a high end HF Rig with DSP, I'd still keep my little Scout and use it as a moble unit. The Scout is VERY easy to operate.

As for the "odd points" on the Scout:

(1) You must change Band Modules to switch Bands.

(2) If you're running CW in a long QSO, the frequency may shift a bit.

(3) The speed for the built in keyer is 25 WPM. You can change it, but everytime you shut off the power, the change is lost.

On the Plus side the Scout has some nice points:

(1) Reasonable cost, under $600 with Hand Mike, 1 band module, and noise blanker.

(2) VERY Easy to use.

(3) Good signal for both receive and transmit.

(4) Built-in Power/SWR meter.

Other Hams will have different feelings about HF rigs, but I feel that the Scout is a good starter system for someone new to HF.

73,
Bob

5421. FOR SALE: KENWOOD TS-950SDX COMPLETE STATION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-28 00:00:00 UTC
From: n2ss@bellatlantic.net
Message-ID: <3687c703.274446653@news5.bellatlantic.net>
Source record: 121867

I have a complete Kenwood station for sale:
Kenwood TS-950SDX
SM-230 Monitor Scope
MC-90 Microphone
IF-232C Computer Interface

Only reason I am selling is because I have too many radios. Besides the 950SDX, I have an Icom 781 and an Icom 756. Since I have an Icom amp, the PW-1, I have decided to stay with the Icom exciters. The TS-950SDX is absolute mint, works perfectly and I hate to part with it. I also have the SM-230 Monitor Scope/Spectrum Analyzer. The MC-90 is a dual head microphone and the IF-232C interface. All are in mint condition. I would like to sell the complete package for $3000 but if there is standalone interest in the 950SDX, then I will sell the other items separately. Thanks for Reading. x-no-archive

Hi,
Thought this was sold but never received payment from buyer, so
here it is again:

Uniden President HR-2600 10M all mode HF mobile transceiver
with mounting bracket, accessory plug, and up/dwn hand mic.
Very nice condition. Works 100%. Runs 25W ssb/cw PEP output,
10W AM/FM. Does repeater offsets and has CTCSS (PL) tones
to access 10M repeaters. Covers 28.0-29.7 Mhz.

This unit is UNMODIFIED (no CB coverage) and has not been hacked,
tweaked, twiddled, or otherwise messed with inside.

If you want a nice 10M rig, this is it. Shipping is at your
expense, but not to exceed $15, shipped, lower 48 or I pay the
difference.

Email if interested. I had several replies a couple weeks ago
when I posted this, but deleted them after selling the rig. I
have not heard from the original buyer, and emails went unanswered,
so am relisting.

Actually the list price at HRO and in the MFJ catalog were the same. I usually find things in an ad and then buy them at the local store. I don't shop price. Fortunately (for me) I'm wealthy enough that I just buy what I want when the urge occurs, and your right, It really does feel great...

BTW, you know that it's you thrifty hams that are ruining the hobby don't you? How are the ham companies going to survive without making a profit. The next to go will be the magazines (ARRL) with no ad revenue. Then with nobody to lobby for us, those grubby commercial companies paying my dividends will buy the bands cheap. All because of your cheap guys...

So instead of making fun of me Marty, thank me and those like me for saving the hobby.....

>73s
>Tom

It's the design. The Scout has an LC oscillator for a VFO. It has a counter to check the frequency of the VFO. When the VFO drifts to far, the counter applies a correction, and that's the jump in frequency you hear. The first Scouts were pretty bad. The newer ones are better, but still noticeable. Otherwise they have great keying (no chirp) and great QSK. The frequency jump is not much and is not objectionable to me. (Especially compared to some boatanchors I work regularly.) But it must be tiring to have everyone you work tell you about the problem. So if you work CW you may not want it, but on SSB the jump is not noticeable at all.

Newsgroups: rec.radio.swap

Hi Name hear is Brad, I have for sale a GE MASTR PRO 440 repeater 70 watt modal. This repeater is on the air now in Astoria Oregon on a frequency of 440.925+ no PL tone .
Comes with a DB products duplexer and Comet vertical whip 9.5 db gain antenna .However the antenna is at the top of the 120 foot tower and you got to go get it !!! The repeater is in a floor mount full size cabinet with built in GE TEST SET all in perfect working order .It now has a RC96 Repeater controller on board that .WILL NOT BE SOLD WITH IT . I do not own the controller and can not sell it with repeater. I also have at least a whole full size truck load of spare parts enough to build two more repeater's . This will be pickup only way too much to try to ship .

The list of other parts is as follows .
13. spare receiver strips some 440 some 2 meter
10 . transmit strips some 440 some 2 meter
3. power supply's .
2 . desk mate cabinets .
1 .portable GE Test Set .
4. mic's 2 desk top 2 hand held .
1 . CW ID unit .
2 .audio coupler controller units .
Lots of spare tubes .
Some Crystal pairs and icom modules .
All original manuals and docs on this gear .
Some other rack mount units for remote control of repeaters.
This will be sold as a package deal and as I said above way to much to ship so must be pickup only.
The asking price for all including the repeater on the air is . $600 or Offer .
Thank's and 73's KJ7VW

Free Photo Swap Shop Site http://www.haybay.net/va3wm/

Looking for a good place to advertise Amateur Radio or computer items? This is it, and the price is right too. Free. Unfortunately if you don't like our service we give no refunds, sorry.

You may include a picture for each and every listing you submit.

You can choose 30, 45, 60, or 90 day runs for your listing and you can renew too.

Once your listing is up and running you can come back and edit it as often as you like.

You can change the picture as often as you like.

You may include your linked URL.

Your e-mail address is not exposed! Ever! Spammers can raid web sites and harvest e-mail addresses, but that doesn't work on our site. Even when someone answers your ad they never find out your e-mail address unless you purposely post it in the body of your ad.

Amateur Radio is International in nature and since right now our sight is primarily VE-lander we do offer a convenient currency exchange calculator by special link to Xenon Labs in Toronto's financial center.

What's the catch?

I'm a ham with major TVI problems and two years ago I had a stroke. I have lots of free time, but I'm not allowed to play radio. I love our hobby and this is one way I can still participate. Please pay us a visit and make use of the swap shop.

http://www.haybay.net/va3wm/

73 de John VE3DOP

--

Free Ham Swap Shop where your listings last for 90 days.

The more places you post your items the quicker you'll get results, right?

5445. Re: Ten Tec Scout

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-28 00:00:00 UTC
From: "James L. Griffith" <griffithj@ricks.edu>
Message-ID: <36881008.9BB12FAD@ricks.edu>
Source record: 121891

The CW frequency jump is the only complaint I have about my Scout. This morning on 40m, I listened to VK's with just a low dipole on SSB with no problem. The receive and transmitter has always been very good. I bought one of thoes Autotuner kits for $189 and you can feed it out of the ACC. power socket. They make a nice pair. I plan on running mine mobile because my new truck is set up with three ACC. Power sockets for communications. Since I draw 10 amps intermitent no problem. The noise blanker also works very well, and I am told in mobile it cures a lot of problems, even from other cars passing by. We'll find out. I bought mine for $450 with all but the 15meter module in mint condition.

>
> I have the Maha charger, and for the money, it canot be beat.
>

Yes, and myself and hundreds of others (see 100's of postings here and on other HR newsgroups) have found that Maha manufactures pure shit!!! I went through 6 of them and not one worked. I lost about $375 worth of batts to the damned things, totally ruined. Maha nor anyone else offered to replace the batts and I damned near had to take them to small claoms court to even get my money back.

> Charges the Yaesu batteries effectively, efficiently, without a
> problem.
>
You must work for them!!!

On the other front I feel that HRO problems must be local to one or perhaps 2 stores. I dealt with them in Los Angeles for years and had NO bad experiences, and I am quite a Grumpy character when it comes to bad service, I mean really grumpy!!! For the last 4 years I've dealt with the San Diego store and I must say that they offer the best customer service of any store of any type at which I've ever shopped. They have held items for me for weeks (I live about 45 miles away from them), they have given me unexpected and unannounced discounts,when available, they have offered sound advice on equipment purchases, based on their and their other customers experiences, they have taken back equipment with full refund (from an aquaintance) weeks after purchase and usage, and etc. and etc..

If I were you and you have a beef with them I would copy all of the "bad accounts" portrayed on this and other news sites and send them with a nasty letter to the manager of the appropriate store and cc a copy to their corporate management and cc a copy to their suppliers (Icom, Azden, etc.) and let them know that their (lack of) management is lowering the reputation of a lot of fine equipment, is making an impact on future profitibility of the corp, and I would let them know that if you are not notified and satisfied, personally that these bad habits have not been permanently cured, once and for all, that you intend to notify their stock marketmakers, the stock news industry, and their small stockholders, who are being screwed by their lack of management. This type of treatment is unexcuseable, a personal affront, and a fraud to their stockholders, perpeterated by a very bad and obviously not functioning management, who are receiving their salaries fraudulently, as they are not performing what is, at the least, the most

rudimentary practice of good management. It is a management problem. If you run a "retail" operation and tolerate, for one instant any "personality problems" out of a retail salesman or mail order salesman, you have only one course of action. Explain to the person the basic rules and practices of salesmanship, re-teach him the company policies, and order him to comply or pack his bags. If it is the second time it has ocurred, you pack his bags for him and throw his ass bodily out of the door and tell him not to return, you'll send his check, less any damages he has caused, or even a bill for additional damages to his home. (I told you I was Grumpy). I've attended many annual stockholders meetings, demanded my minority (amount of stock, not my racial persuasion) stockholders rights, (I've bought a few shares to give me the legal right do demand such.) and submitted my evidence of poor management and asked for fines against past and future salaries, termination, reduction of salary, loss of benefits, and have demanded that if these things were not done, that they be charged with defrauding the company by billing it for services reasonably expected (out of management) and not performed. I have made sure that the market and public press was there to report on the meeting and demanded that the entire matter be disclosed to all stockholders. I have never failed to cause "management" to occur immediately. The only way that HRO or any company could have such bad proctices is that most people expect "someone" else to correct the problem. If you have let this go for months and for years, you are getting exactly what you are supporting. You are not a friend of the HAM community nor a good member of any community. Accept that we come into this life with no guanantees. Become a member of Society and scratch your brothers back, so he will feel like scratching yours. The problems you outline with HRO are there bacause someone before you let you and me down. If someone else has the problem it is because you and I let them down. I don't know about you but I am forwarding this missive and copies of all the MNews articles conceerning HRO, both good and bad, along to the Corporate management and to all of the branches.

I like doing business with my local HRO and I know that their low prices and good service are based on all of their outlets being profitable. I want them to know that their "brothers" are cutting into their salaries/sucesses.

If you are prepared for the truth, the best HT for a couple of new young hams would be one of the kit offerings from NorCal and a key, a pair of earphones, and a couple hundred feet of copperclad.

IMHO, of course. Otherwise perhaps just get them a couple of Radio Shack CB radios.

Hi Gang,

Thanks for the responses so far, but I figured out the key issue here is
that this is the "B" model. It required a
small upgrade kit (couple of caps and and inductor). So if anybody has that
info, please let me know

Thanks,

I spent alot of money at HRO over the years and I have never had any problems here in Atlanta. NOW, I have bought a TNS From AES in florida by MFJ and received a butchered unit that did not work. I spent over an hour with a soldering iron fixing the half ass solder job they did. I finally got it to work.

MFJ in my opinion sells the biggest pile of S__T available in the ham market. I have promised myself not to buy from them again. They absolutely, possitively suck ..

P.S. Forgot to add..... Mr Jue is the cheapest ham on earth.

This is a complete package. Includes (2) UHF Motorola GP300 Handhelds each with battery and antenna as well as one overnight charger. Radio's are Model P94YPC20A2AA both with manufacture date of 92/2/28. Radio's were 2 channel models that have been converted to 16 channel's and had the top channel label changed to reflect this. The radios are 10/10, they look like they have never been used! The charger is brand new in box, just arrived from Motorola. The batteries are in fair condition. The radios can be programmed for scan and cover 438-470MHz. They also do MDC-1200 as well as QC-II signalling. Will program to your frequencies free of charge before shipping.

You still can buy these same radio NEW . There are some Citizen Band Dealers on the WEB (COPPER ELECTRONICS) is one of them and they sell 10 METER HAM RADIOS that have Freq display etc. They are really intendended for the CB market but they really work fine out of the box for ham bands
and the price is great.
Tim

Source record: 121924

I had ft-840 a few years ago and I was playing with power a little, too
When you open the top cover of the rig have a look on the rigs
"motherboard" On your right hand side, very close to the front panel
you will see 4 or 5 potentiometers, the last to the right is marked with PWR
That's the one that makes your wish come true. I was able to run well over
150 Wtts
with that rig.
good luck and happy new year

>Art k9xf

Yes, for the new units, but I don't think the old NiCD chargers were
intended for NiMH use.

I think MFJ had a new unit out that may be of more help to you than a rig
with a noise blanker. Don't recall the model, but look in any big ham
magazine for MFJ adds and you'll probably find it.

Source record: 121928
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I, too am considering the TM-V7 as a new dual band rig. I have heard several negative comments regarding the visibility of the display in broad daylight. What are the experiences of current TM-V7 owners?

Re; the programming cable with level-shifting circuitry, can anyone be more specific. Typically, IC's similar to the 1488 and 1489 chips shift TTL signals (0/5V) to RS-232 levels (+/-12V). There also are some later chips with both input and output level shifters.

Can you open the programming cable and inspect the cirsuitry? Is it all contained in the 9-pin hood? Can you post a photo or schematic?

Many thanks and 73.

You said:
>Hi Everyone. Does anyone know if there an adjustment for the PL(CTCSS)
>tone level on the Icom 706MKII, and if so, where it is? I need to adjust
>this as the pl tones is just audible whenever I set one on transmit.

Martin-

I assume there is such an adjustment, but I don't know where it is. I have the original IC-706, and the CTCSS tone is apparently at the correct level, since it works 100% so far.

Consider that CTCSS is also called "sub-audible tone". When it is correctly adjusted, your tone deviation will be approximately 0.5 KHz compared to 5.0 KHz peak deviation for voice. On top of that, most rigs have audio response designed to filter out anything below 500 Hz. Therefore, yours may already be set correctly.

Judge it by how it works, not by how loud it sounds!

I'll second the post to stay away from the credit card radios. They are fun to play with, but unless you live in a flat area or are in a line of sight with a repeater, they will just frustrate a new ham. A half watt with the little antenna just doesn't cut it.

In Alinco's defense, they are fun to play with and easy to hide in your desk drawer at the office.

5482. 726 6m power increase

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-28 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <7677k0$eo1$1@arachne.labyrinth.net.au>
Source record: 121937

I'm told that the output power of the 6m section in the IC-726 can be
increased well above 10W, by just adjusting the 50MHz output power resistor
R291. I'm a bit wary about this (it's my first decent radio) so I was
wondering if anyone has done this.

thanks,

Hamish VK3TYD

i recently bought a alinco 610 dual band radio and they threw in a credit card sized hand held

this thing does 300 mw and i thought i may be able to use it on uhf cb as australia has a 476 mhz allocation using 5 watts so im sure not exceeding any power requirements

that way my missus can throw it in her handbag and it may be of some use the closest 70 cm repeater to me is 60 km's so 300 mw doesn;t get much use thanks len

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-old SYNTHESIZERS (knobs & sliders pref but not necessary. Moog, ARP, etc)

-old KEYBOARDS (1960's-mid 1980's)

-any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

-old DRUM MACHINES (Roland TR-909, TR-808, TR-606, CompuRhythm, etc)

-VOCODER

-OLD EFFECTS (filters, ring mods, phasers, flangers, analog delays, Space Echo, Mutron BiPhase, ElectroHarmonix, etc.)

-ANALOG SEQUENCERS (analog, with knobs for each step)

-MIDI gear (rackmount synthesizer modules)

-Roland TB-303 Bassline
-Oberheim Xpander
-Prophet VS rack
-Oscar monosynth
-Gleeman Pentaphonic
-Prophet 5
-Jupiter 8

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

http://members.aol.com/rolandman1

Please email me at rolandman1@aol.com if youve got anything like the above or know someone who might. Thanks in advance, sorry if this message distrubs anyone.

>Does anyone have a Yaesu FT-920 ?

Sure - lots of people do...

>Are the any good,

What's 'good'?

>are the sensitive,

Mine cries every time I leave the room, so I'd say it's pretty
sensitive. And it frequently picks up some very weak signals that
some other rigs might not...

>can they be moded for out of band tx ?

Probably. But it's illegal, so why bother? Unless you need the MARS
frequencies, which Yaesu will do for you at the factory.

Oh yeah - the mod apparently involves changes to the firmware and may
or may not work successfully and may render your rig totally useless
when it's done.

Always baffles me why someone would spend $1500 on a radio and the
first thing they want to do is get inside and see what they can screw
up trying to make it transmit on frequencies it's not authorized for..

>Do you think they are value for money

Yeah, I think so. Depends, of course, on how much you pay. Got mine
new for $1349 back in July. That's a much better value than the guys
who bought them a year ago and paid $1800.

Not being completely familiar with the 1000, I'm going
to assume your sending FSK because my FT990 has
that capability.

You have cabled up the the PK to the 1000 correctly?
As I recall, the FSK output of the PK is on the single
5 pin din plug, NOT the 5 pin straight plugs for radios
1 and 2.

The 1000 transmits when it is supposed to? But only
transmits a constant tone (you are sending some data
right?). Put a VOM on the FSK on the Pk line and tell
the PK to
transmit, watch the needle and see if it wobbles (that's
a technical term). If it does then the problem is with
the 1000.

If the 1000 is like the 990, the shift pin on the RTTY
jack is looking for ground to shift the tone. xmit into
a dummy and ground it, see if the shift changes. If
so you know the 1000 is ok. If not, you have problems
with the FSK shift IC. Just wire it to the PK as AFSK
and forget about it.

Let me know if I can be of any more
assistance.

Matt

From: ka2ezn@bellsouth.net
Message-ID: <76aqtvmof1@nnrp1.dejanews.com>
Source record: 121708

I have had one almost since they came out, and I can give you the following information. As far as I can see, you can't mod the rig for out of band xmit. There is no wire or diode to cut. The mod is supposed to be some sort of a program that you use to modify the cpu. As I have no desire to transmit out of band, I have not looked into this any further. I can compare the 920 against a Kenwood TS 850, and can give the following comparision:
The antenna tuner on the 850 has a wider range. It will tune things that the 920 will not.
The VLF capabilities of the 850 are better. I can hear things with the 850 that I can't hear on the 920.
The absence of an optional ssb filter on the 920 is a negative.
The optional filter for AM reception on the 920 is a negative.
DSP? Big deal. Yeah, it works fine. For the 850 I have one of those cheepie radio shack dsp units (which in my opinion work great!) on it, and I get almost the same result.

Bottom line is that the 920 is an ok radio, it does everything as advertised, and seems pretty bulletproof. If I had to choose between the 920 and the 850, or perhaps a Icom 756, the 920 would be history.

>

Sounds like the dreaded power switch bug strikes agn!...

Scott,
Many FT50s have a bug in the power switch... in that they appear to turn
off the radio, but there is still a good power drain that will kill the
battery after a few days or so.

Two answers, 1) send it back to Yaesu for the repair.
2) since yrs is out of warrenty, a simple method
is just HOLD the off button for abt 2 secs when turning
off. This will allow time for the power
curcuit to really shut down.

I don't recommend removel of the battery because over time it will speed
up the death to the internal battery which holds the memories.... usu
requires a send back to Yaesu

good luck
Tom aa2vk

Take off the back cover. cut the red loop of wire. (it will be obvious which one it is) reset per the users manual. Now you have full TX.

Part 1) Military Surplus liquidation:

The following military surplus vacuum tubes are being liquidated to the highest bidder. These are all NOS (New Old Stock) tubes that were built to military specs, and were surplused by the Canadian armed forces. It is believed all these tubes were to be used in radar units.

1) NATO Stock # 590-00-543-1907
6AV5GA made by General Electric Beam Power Tetrode

2) NATO Stock # 5960-99-000-0100
CV100

3) NATO Stock # 5960-21-462-0240
JAN-CEQ-72 made by Continental Electric

4) NATO Stock # 5960-21-883-8023
Radar Display Picture Tube made by AEG p/n 4169B
16ï¿½ diameter and 24ï¿½ long, packed weight is 15.75 kg

Pictures of 2), 3), and 4) are available through email if needed. Feel free to make any offer you wish, these tubes will be going to a new home

regardless of price on January 15, 1999. Reasonable offers may be accepted prior to the liquidation date, otherwise the highest bidder will be the new owner. The purchaser is responsible for all shipping and

duty charges.

Part 2) Other tubes

Here are the numbers of tubes I have available at present.

Not to sound like a total smart ass, but I have to ask, have you checked
the battery voltage? There has been talk of FT-50R's draining batteries
fairly quickly, just sitting. Try a freshly charged battery, or use the
external DC supply.

I thought I would load up my SB200 with a Kewwood TS520 that I bought recently. The Kenwood manual says "connect either pin 3 (normally closed to ground during receive) or Pin 5 (normally open to ground during receive) of the REMOTE connector to the control jack on the amplifier."

I think the answer is pin 5. Just wanted to make sure. Anyone with experience?

5523. For Sale: Yaesu FT-290, 690, and 790 MArk II

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-29 00:00:00 UTC
From: David Struebel <wb2ftx@nac.net>
Message-ID: <36890B28.8B90EF99@nac.net>
Source record: 121730

Here is one of the deals of the year. I am offering all three of my
Yaesu multi-mode portables for sale... Each radio is capable of SSB, CW,
and FM.... The two and 440 versions are 25 watts output with the
attached power amplified module. The 690
(6 meter) module is rated at 10 watts. All three radios have the tone
encoder /decorder
boards installed.

I am asking $400 (US) for each of these. $1200 will buy you all three,
plus the portable C size Ni-Cd back.... If you go for the 3 radios plus
the battery pack, I'll pay for shipping. Otherwise $400 (prefer US
postal money order) plus shiiping. All radios
have manuals and have not very much use, and have never been mobile....
Hoping to replace them with a Yaesu FT-847 so need the cash.

Source record: 121731

Hi:

I can relate to your problem. I have refused to do business with HRO
for a couple of years now. I order an item from the Atlanta store, by
phone, as a gift for my son-in-law only to find that the price in the
catalog and the price the salesman quoted was not the price billed to my
credit card. I called the store and was informed that the price had
increased and they would not consider a refund of what I considered to
be an overcharge. I will never buy another item from HRO. "If they
don't appreciate you for your money, they don't appreciate you at all."

5525. TS-140S HELP

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-29 00:00:00 UTC
From: "John Galgano, KF4WCL" <jgalgano@america.net>
Message-ID: <36890843.6842@america.net>
Source record: 121732

Hi Group,
Hope everyone had a nice holiday.
I have a Kenwood TS 140S (bought used about a year ago). It has been working great, but recently I have been having problems with the microprocessor malfunctioning. I turn on the rig and I either get no display or all kinds of random displays. The manual says this is a symptom of low voltage to the chip. I used to be able to reset the microprocessor by pressing the A=B switch and turning the power on. This still works.....sometimes, but the past few days it takes up to an hour to get it to "reset". I have replaced the battery backup and that helped for a while, but this problem has really gotten worse the past few days.
Anyone out there every had the same problems with a 140?? If so, how did you remedy the problem?
Thanks in advance for any input you can provide.
PLEASE REPLY VIA E MAIL
73,
de KF4WCL
John Galgano

5526. ARRL's SSB Compandored Radio Project Manual Needed

Newsgroup: rec.radio.amateur.equipment

Happy New Year to all in Radio Land. I am searching for the
instructions that were offered in a issue of CQ on the ARRL's SSB
Compandored Radio Project. I recently purchased the boards off an EBAY
auction and need the instructions to complete the project. Will gladly
pay for any costs involved.
Thanks Don KB6GQA.

I believe that a lot depends on the particular HRO.
I visited the one in Denver with a desire to spend money.
Walked around for 20 minutes waiting for someone to say hello, or do
ya wanta buy sumstuff.
Not so much as a hello or good bye or ESAD.

The shop in Portland Oregon on the other hand gets high praise.
Actually pointed me to a place where I could get what I needed for
less !!! Needless to say, future purchases will be from that HRO.

It all depends on the folks.

From: bigron@i-cafe.net
Message-ID: <MPG.10f2d561ce9b2c4a9896f9@news.pon.net>
Source record: 121748

I just got my V7A yesterday and despite following the directions, nothing happens when I press any number key on the microphone. The other buttons work on the microphone (Call, VFO, MR, PF and the up/down buttons). Also, shouldn't it be able to transmit DTMF tones if you press the PTT and a number button? It acts as if they aren't even there.

I have a TM-V7A and have had no problems with it. I live in the Philadelphia, PA area with high rf fields and experience hardly any intermod and this is with the AIP turned off. All functions of the radio work as advertised, both TX and RX audio is very good.

I have no problems reading the display in sunlight. However, if you are wearing polorized sunglasses look out, the entire display disappears. This can happen with any LCD and polorized sunglasses but seems very bad with the blue screen of the V7A.

Source record: 121757

a couple of weeks ago I got a nice Icom W32A HT from HRO in Salem, NH...
They were very helpful, they are all ham operators and know the equip... and I am am very happy with the radio and other things I purchased. Nothing but good responses from all out there on the Massachusetts repeaters about the performance and clarity of the ICom.
You do have to ask about the prices, because they change frequently... mine happened to be less $$ than listed in the book, so I cant complain at all. Try the guys in the NH store, they are great.

Thanks for the advice guys. I found two used HTX-202's in like new condition for the boys. They have three friends that will be studying with them for the exam (we're even going to have weekly 'classes' in our home to help them out.) Now I have to decide if I should hide them until they get their ticket, or put them on a shelf so they can see them (for incentive!)

BTW, I also bought a used DJ-C1 for myself! (I live only 1 mile from our local repeater.)

>use of might be my best option.
Simon,
I have one but I'm in Nort Glos so unless you are passing in the next
few days I doubt if its any use. What comes to mind is that some months
ago I saw an article on constructing a simple valve tester. It was, I
believe, in Radio bygones. If you contact the publisher he can probably
find you the article. They do back numbers for a couple of quid.

If you are passing Stow on The Wold you are quite welcome to drop round
and test any number of valves if this doesn't help.

Regards

Robin

I have four MITREK commercial radios that are supposed
to be in the 2m range. They came in a trade from Canada.
Type: JJHA Watts: 30 Model: CT43JJA3900A
I have the control heads, cables, and mics.

What, please, do I have? :-)
Where might I acquire manuals, schematics, etc.?
Anyone know how I might unlock the cases?
(yup, no keys provided)

Thanks! & Happy New Year!

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.scanner,rec.ham-radio.swap

I have a brand new Icom IC-2SRA hand-held for sale.
It has 2 radios in one package.
A 2 meter transceiver and a scanner.

Brief Specifications;
Transceiver
Transmit : 140-150 MHz
Receive : 138-174 MHz
Output Power : 0.5 to 5 Watts (4 levels)

Scanner
Freq. : 25-950 MHz (Continuous, NO GAP)
Mode : AM, FM and WFM

It comes with BP-84 Battery Pack, Wall Charger, Softcase,
2 Antennas (one for Tranceiver and one for Scanner),
and Manual. but no orginal box.
I threw the box away as soon as I bought it.
It's been in the drawer for several years and never been used.
Sure I turned it on to see if it worked OK when I first bought it
and I decided to sell it today. It still works and looks brand new.
I'm asking $325.00 U.S. plus shipping.

Happy New Year, 73.
Robin

> >
> >
> >

The 950S is not an extension of the 940 unless you call progress an extension. The 950 is surface mount and the 940 is thru-hole for one difference. The only difference between the S and the SD is the SD had the DSP unit, all filters installed etc. In other words the S was a stripped down SD.

Now the SDX is a different breed of cat with so many differences I won't try to list them(been done here in the past).

5576. Re: Is the FT-920 Yaesu any good

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-29 00:00:00 UTC
From: Andrew Rubin <slash830@earthlink.net>
Message-ID: <368990D4.16EE1A97@earthlink.net>
Source record: 121783

I own a FT-920 and love it! In reply to the gentleman that said the DSP is useless (I forgot his exact wording), I completely disagree. The DSP on the the 920 is one of the best I have ever used. Packed with features. The 920 picks up signals that other radios have a hard time catching. With the DSP, the best Noise Reduction ever, and awesome notch filter, Its one of the best rigs. I researched and tested rigs left and right before I spent my money on the 920. About the mod for this rig. The software out on the internet to mod this rig was put out by a european dealer without the permission of Yaesu USA. The software is for the european version ONLY. Damage could call for a new CPU which costs $120. Not saying it will damage it, but chances are very good. Yaesu will not put out a mod for this rig because of the damage and/or confusion it could/will cause. Oh... If I had to choose between the 920 and the older 850, no questions asked. The 920 would be my choice. Newer, 33 BIT DSP, best noise reduction ever, awesome notch filter, etc etc etc. If you have any questions regarding the 920, E-mail me at: slash830@earthlink.net

Here we go again? Are we being spammed with this amp add or what? If he's serious about selling this thing, let's get it sold already. I asked him to respond with a reasonable price and he never responded. So I guess will see this add being posted everyday at the same price into the next millennium. Good luck.

Threads like this point out that a factor as important (or more so) as where you buy from is the customer service of the bank that issued your credit card. Although the consumer credit protection laws apply to all, how well your card issuer takes care of you can be the difference between night and day. I had a similar experience, billed more than the merchant quoted, I complained to Chase and they slapped the merchant silly. Got my refund.

It sounds sort of reminiscent of the FT50 problems that were never fixed i.e.. The wrong IF filter for 75 kHz FM, the radio consuming power while off, noisy transmit audio, CTCSS decoder falsing, and the voice recorder that never worked.

> alan.caplan@cwix.com

Do not waist your time with AIR variables, it does not pay.
A UCSL475 might cost you from $50 to $100 but it will take you all the way to
160 mtrs, and it has a min of 10 pf, very disireble for 10 metrs.
That is what i am using with my 8877 with 3700v on the plate.
A UCS300 is a better choise but not enough capacity for 160 mtrs.
Have fun with your prject, and remeber, IT CAN KILL you.

Hello!

Interesting thread on the Ten Tec Scout. I've had a Century 21 for over a decade and enjoy fooling around with it. Friends have had 505/509's.

Anybody have any ideas for cold weather operations with a Ten Tec Scout? A buddy of mine is using one in a trapper's line cabin in the Sub-Arctic and the Scout transmits fine below freezing, but won't receive. It motorboats with a high-pitched sqeal at S-9. Something about temperature-sensitive capacitors? Anybody got any ideas? Any fixes? It's a pain to have to toast it over the stove before he fires it up. Thanks, ...Orin VE8DU

And I thought mine was the only one that does that! At first, I thought
it was AC hum from the power supply. Too bad I still had the problem when I
used battery power. Anyway, I turned on the narrow band filter on the
repeater input (VFO B) and that helped to clean up the signal.

Yea, like Fred said!

I service commercial gear as part of my job, and you really can't tell the
deviation of a PL tone just by listening. Pretty much need a service monitor
or a good deviation meter to properly set it. One rule of thumb though, if
you CAN
hear your PL tone, it is probably set too high.

Wish I had the service manual. I need to buy one for myself, might be
helpful
in adjustments such as this. Guess it will go into next month's budget. :-)
Darned thing is most costly than some of our Motorola manuals.....

Hello
I am interested in getting the new Yaesu FT 847 and was wondering if anyone has had any expierience with this radio? If so, how is it's recieve and sensitivity? Does it get much intermod? Would I be better off getting seperate radios such as an HF radio with 6 meters like the Kenwood TS 570SG and a VHF/UHF radio like the Icom IC 821?? Any information is greatly appreciated!!
Please email me directly at: N9YLN@AOL.com

Dear Sirs,

NavigatoR Ltd, a Russian company, specializes in trading
Russian vacuum tubes used for air and marine navigation, radar
as well as in broadcasting, amateur radio, Hi-Fi audio,
meteorology, communication, medical applications and industry.
All tubes are engineered and manufactured in Russia. Tube types

include Broadcasting Tubes, Magnetrons, Travelling Wave Tubes
(TWT), CWT, Transmitting Tubes, Klystrons, Amateur Radio Tubes,

Hi-Fi Audio Tubes, Industrial Tubes, Transmitting Pulse Tubes,
Modulator Tubes, Modulator Pulse Tubes, Control Tubes,
High-Voltage High-Vacuum Rectifier Tubes, Cathode Ray Tubes,
Ceramic Tubes, Diodes, Display Tubes, Electron Tubes, Hydrogen
Thyratrons, Ignitrons, Noise Source Tubes, Nuvistor Tubes,
Pencil Tubes, Pentodes, Photodiodes, Readout Tubes, RF
Amplifier
Tubes, Receiving Tubes, Rectifiers, Vacuum Relays, Spark Gap
Tubes, Subminiature Tubes, Surplus Tubes, Tetrodes, Thyratrons,

Vacuum Capacitors, Vidicons, Voltage Reference Tubes, X-Ray
Tubes, and Glass Tubes.

Russian vacuum tubes have a worldwide reputation for being
highly reliable and unique. A repairs facility is available for

all Russian vacuum tubes and for a wide range of equipment
manufactured by other companies.

Our microwave products for wireless communication systems
are
in great requisition.

Please, check our web-site http://www.tubes.ru/
We accept foreign orders.

Thank you in advanced

Perhaps the problems are mainly at a couple of the stores. I have had considerable dealings with HRO Oakland, and also some with HROs San Jose and Portland. In all cases my salespeople have been helpful, professional, courteous, and knowledgable. They have given much advice, with no pressure to purchase. I wish I could say the same about other retail establishments I vist.

Leave it to someone to imply that you boys are not worthy of hamradio.

On the contrary, welcome them for me when they get their ticket!

Also, I'd agree that the mini HT's aren't a good primary HT. They are for a special purpose. Though I haven't owned one, I've heard good things about ADI. The Radio SHack HTX202 would also be good if you can get one, so hurry. Otherwise, I think your best bang for the buck woulf be one of the "major" line dual banders. They are only a bit more than a single bander. My Yaesu FT50 is GREAT! I am also a firefighter and have modified it and used it for that purpose. Needless to say, they are quite rugged. Nearly as good as Motorola stuff. It really depends on what you'll spend.

Again, congratulate your boys!

Noel,
The 950S was really an improved 940 which further developed into
the 950SD. The 950SD had the introduction of the DSP unit which
was controlled by external means. The 950SDX had minor changes
from it's earlier version in which the DSP controls were moved to
a Menu control. I have had both the SD and SDX which is what I
operate now. The 950SDX is a great rig, but I believe it is now out
of production but still selling as NOS (new old stock).

5618. RTTY HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-29 00:00:00 UTC
From: kmortensen@snet.net
Message-ID: <76anqq$k8a$1@nnrp1.dejanews.com>
Source record: 121854

I am trying to get up and running on RTTY and I am not having much success. Unless the signal is like 20db over S9 I get almost all garbage. I am using an Omni VI plus and a 6 year MFJ 1278 multimode TNC.

10 years ago I had no trouble with RTTY when I used a Corsair and a dedicated RTTY unit that I can't even remember the manufacturer of. It was in a black case, had a couple of green LEDS and I think it had a meter on it as well.

Am I doing something stupid? Is it me, (quite possible) or is the MFJ basically useless on RTTY. Are the other TNCs such as the DSP232 or Kantronics better? Or should I shop around for some 15 year old technology that really does work on RTTY. What is everybody else using?

Thanks for any recomendations.

Hummm, let's see...the average corporate business raises the prices of items
for
several reasons. Such as: 1.) Profits...gotta take care of the stock holders
and
those high $'s executives, 2.) labor costs, 3.) cost of materials. But the
only time
I see the price of any item going down is when it's been on the market for
awhile
and it's no longer the new/high demand/gotta have item, or close
out/discontinued
list of items. Yet I see alot of these high priced executives walking away from
companies with millions in stock options and other benefits...and the company
didn't show a profit! Labor unions asking for higher wages, and more benefits,
but you don't hear them offering to improve on the quality of the product in
exchange,
and then wonder why big companies are moving plants to third world countries.
Am I cheap...no. Thrifty...yes. If company "A" sells item "Z" for one
price, and
company "B" sells item "Z" for a lesser price then I'm going to by from
company "B". Who wouldn't? Let's take the Kenwood TM-V7A...AES is selling
it for $499(US)...HRO is offering the same radio for $439. Duh, it's simple...
I would buy from HRO.

I've delt with both AES, and HRO. The salesmen for both companies have been up front with me over the phone and inform me if the item is in stock, or will take
"X" amount of time to get it and ship it to me.
As for poor company practices, like Pete I've complained. I complained to one communications company(that I am a minority stock holder of) that provides internet services. It was well known on a newsgroup dealing with SPAM email that this company wasn't dealing with complaints about it's internet users SPAMING.
I emailed their abuse and stockholder services about my displeasure with this, and
if they didn't get their act together on this subject, that I would take my business
elsewhere. I also posted these email address' to the newsgroup for anyone else who wanted to complain. Did they take care of it? I never got a reply to my email...but
I'm not getting the SPAM email from their users anymore. Either I'm lucky, or they
got their act together.

5620. HRO Nightmare....

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-29 00:00:00 UTC
From: ka2ezn@bellsouth.net
Message-ID: <76aq84$m8e$1@nnrp1.dejanews.com>
Source record: 121856

I'd just like to post a little nightmare that happened to me last fall.
I bought a Yaesu VX1R ht from the delaware store, and when I got it
home, I got reports of very harsh and restricted audio. After getting
reports from a dozen hams, complaining that they could barely understand
my audio, I took the unit back to HRO the next day. I asked to try another
one at the store, and it had the same trashy audio. At that moment, I
asked that I should get a refund, and I'd like to buy another HT.
The three salespeople there "ganged" up on me, and told me that I didn't
know what I was talking about, inferred that I was some sort of idiot,
and it was a "used" radio, and if I wanted a refund to purchase another
ht, I'd have to pay a 15% restocking fee. I took the HT back home, and
wrote Yaesu a nice email, detailing my problems and dissatisfaction.
They promptly told me to ship it to them, and they did change a couple
of parts in it. Jim at HRO did leave me a message, (probably at Yaesu's
demand) that I could then return it, but as far as I was concerned,
I was finished with HRO. I'm in sales, and that's no way to treat
a customer!!! 73, John KA2EZN

I'm not sure when the radio was actually introduced, but it was reviewed in
Sept. of 92 (QST)...it was rather small - a mobile or base type thing.

I had one for a few years, and frankly, didn't care for it much, I sold it.
I didn't like the receiver - mine suffered from 'thumping' and poor
reception. Plus, I believe it was limited to only one optional filter,
which I didn't care for...

In general, it just lacked features that other rigs of the day had...For the
same money, I feel there's better rigs available...

Just my 2¢ - not gospel...

5623. Best Amp to Boost Yaesu VX-1R for Mobile Use?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-30 00:00:00 UTC
From: mhgates@my-dejanews.com
Message-ID: <76e9icfcl1@nnrp1.dejanews.com>
Source record: 121610

Hello.

Any other Hams using an amplifier to boost power for
your Yaesu VX-1R (or similar low power unit) for mobile
use? Any dangers in doing this (like noise in my transmit
audio,or the extra power frying my radio)?

I'm considering buying a Mirage BD-35 dual band amp for
this purpose http://www.mirageamp.com/amplifiers/bd35.html

The Mirage power curve chart shows .5 watts in (lithium
battery power for VX-1R) produces 18 watts out for 2 meters,
and 10 watts out for UHF. One watt (cigarette lighter
adapter) will produce 30 watts on 2 meters and 16 on UHF.

With a good antenna and the amp, I'm thinking I can get
pretty good mobile performance from my VX-1R... So I
could carry it on me during the day, and when I'm in
my truck, just plug it in to the amp, external antenna,
external mic, and external power to make it a Dual Band
mobile rig (all I need is the amp).

The amp costs $149 at HRO, and for another $50, I could
just invest in a mobile 2 meter rig... On the other hand,
I could also plug in my RS HTX-202 and get a full 45 watts
out on 2 meters, which would give me an HT 2 meter rig with
mobile power (HTX-202)... AND a Dual Band HT (VX-1R) with mobile
power -- up to 30 watts out on 2 meters, and 18 watts out on
UHF (plus whatever gain I get out of the antenna).

I'm only about a year old in the hobby, and I'd really appreciate
some sound advice on this subject.

Thanks and 73,

Mike

I am selling a Kenwood PS 50 12 Volt Power Supply that matches the Kenwood TS440 , TS450 etc. This is a 20 amp supply and is in perfect condition. I am selling it because I consolidated my shack power supply to a single supply for my HF, VHF, UHF radios and accessories and have no need for it. I will accept the first offer over $85 and will ship at my expense upon receipt of a bank check or money order.

Reply e-mail or call after 6:00PM EST to Joe Vilardo 610-429-1514 or fax 610-344-3403.

I stand corrected by Yaesu USA, this date...

The PL decode problem apparently occurs ONLY during the scan mode.

Dan

I have a Timewave 59 Plus DSP filter for sale. The filter is in perfect condition, complete with manual. This DSP unit connects between your radio's audio output and speaker. It does an excellent job of reducing noise, filtering adjacent interference and pulling weak signals out of the noise. It is supper for HF digital modes, CW, RTTY, AMTOR, PACTOR, SSTV, PACKET and SSB. The manual gives a complete settings for all modes of operations.

I am selling the unit because I purchased a FT1000MP with built in DSP. I paid about $250 for the unit new 3 years ago and will consider offers at or near $150.00. I will ship via UPS on receipt of a bank check or money order.

Yesterday, Having learned that the HAM STATION in Evansville, Indiana 1-800-729-4373, had some of the new Yaesu VX-5 radios in stock, I placed a call and spoke with Jeff Libermann about ordering one.

He did confirm that he had 5 in stock, but was quick to state that he could not, in good consciense, sell me a radio as the folks at THE HAM STATION noticed the PL decode bug during the scan mode.

He assured me that Yaesu was working on a fix, and he would alert me when they were available without the glitch.

I wonder how many other Ham dealers advised their customers about the problem, or bothered to test the radio before shipping?

It is nice to see that in the cut throat world of ham radio dealers, there is a shop still willing to take the time to keep the customer in mind when making a sale.

Hats off to THE HAM STATION....

Dan

I second the statement- good people, prices, and were very kind when I needed to return a filter a year ago... nice to see the "little guys" staying in business in this small-margin business.

One thing to think about is that the 3MM antenna connector is NOT designed for repeated disconnect. The center conductor rotates when you twist the duckie. This will wear out the connector.
Audio output is also a peoblem. You'll probably also want to hook up an amplified speaker. With all the wires hanging out of it, you'll probably want an external microphone....pretty soon you've got a mobile rig that doesn't work very well.

Suggest you try just the car-mounted antenna first to see if you like it. If you're hopping into the vehicle to drive cross-country, connecting it all up is not a big deal. If you are hopping in and out of the car all day, you might find the repeated changeover a pain. I found that I was too lazy to connect it all up...especially since it works just fine in the car as a handheld without hooking anything up.

There's no substitute for a mobile rig that comes on when you turn the key.

Has anyone done experiments with a "sleeve" that just slides over the rubber duck and couples to an external antenna? Seems like that would
be the ideal solution.

i agree but wanted to add that the c5 dual band credit card is cool.
now granted it is my backup so to speak, an icom t8 being the primary,
but
even with it's miniscule 300mw output the little thing get's into my
70cm machine
without fail anywhere in my small xtra rural town. i would have gotten
the c4
if it had the built in speaker but i went with the dual band and really

like
it for the niche it fills.

Have Trace Engineering 2248SB power inverter for trade. Puts out 2200 Watts at 120 VAC full load. Will surge start 6000 Watts. (to start compressors, electric motors, etc.) Will operate as a demand start system as well. Has built in 25 amp charger. Runs from 48 volts DC. Price new = $1400. Have manual and DC hookup cables. No batteries; they are too heavy and costly to ship anyway. Has about 15-20 hours of operation time on it. This is a great setup for operating power tools, etc from the back of a truck at a remote work site and such. Also have a couple of smaller UPS systems as well.

Looking for very good quality shortwave receiver or transceiver with general coverage receive, in good working condition. Must have SSB detection, good selective filtering for AM and SSB. Good tube equipment fine also. If interested, please reply off list.

Take it from someone who got their ticket at six (and tech-plus at seven.)
Don't buy them a credit-card radio. The HTX202 would be a decent first HT.
When I got my ticket, I got a Yaesu FT-747GX HF rig and a DX-88 vertical, as
well as having access to one of the Yaesu single-band VHF handhelds (I think
it's the 23) and an Icom U-16. I still have both. The 23 and the U-16s are
great radios, but became backup when I purchased my FT-50RD (which would be
a GREAT first radio). The 747GX is still my main HF rig- while the
746s/756s/FT1000s/etc. are great radios, I still love my little 747GX- it
does a great job in pileups (really, it does), even with the included palm
mic, and never gripes about transmitting when my gel-cells get down to
11.5VDC.
One of the H16s/U16s from Icom would be an excellent radio- they are a
commercial radio but are very intermod-free and durable.

5655. "Killer" Yeasu VX-5 has a MAJOR glitch right out of the gate!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-30 00:00:00 UTC
From: dconti2@earthlink.net
Message-ID: <3689a7f5.24524976@news.earthlink.net>
Source record: 121659

It appears that the new Yeasu VX-5 do it all, "killer" radio, was shipped with a glitch as follows:

When you enter a PL tone to a freq, the freq will not open when that tone is active...same scenario with a toned out freq in a memory channel. In the scan mode, it goes right by and will not open when that tone is active.

Yeasu is aware of the situation, but it is yet unclear as to what they plan to do about the problem, and luckily it has been caught before a huge number of radios begin to ship from dealers.

I hope this is not a precursor to other problems for what appears on paper to be a great new radio...

We'll see...

Dan

5656. FS: Drake TR-4C, AC-4 and Speaker

Newsgroup: rec.radio.amateur.equipment

From: wabate@erols.com
Message-ID: <368caefc.31334868@news.erols.com>
Source record: 121660

I have a very nice Drake, TR-4C for sale with AC-4 power supply and MS-4 speaker. The transmitter and receiver have recently been aligned. There are three new finals in the transmitter. 80M output is 200 watts and 10M output is 140 watts.

The receiver exceeds the original sensitivity specs. The power supply has been recapped.

The front panel is excellent with only a few minor scratches that are hard to see. One knob is cracked but has been epoxied. The sides of the cabinet are just as good as the face. The speaker face is fine but the speaker cabinet has more noticable scratches. The S-meter is frosted somewhat but you can still read it.

Price is $350 plus split the shipping in conUS from 19001. This is a great rig in top condition. Email with any questions. On air tests can be arranged.

I have a Yaesu FT-230R mobil 2-meter rig that has the creeping crud LCD-itis, and of course, Yaesu no longer stocks the part. I need either:

1. A dead FT-230R that still has a clear LCD
2. An alternate source for the part (not likely, I know, as these things tend to be custom). The number etched into the glass is H1313-0. Maybe the 430R uses the same display?
3. Information from anyone who has adapted the rig to use 7-segment LED's.
4. A copy of the schematic of the display circuit, so I can attempt #3 myself.

Thanks in advance for any help that anyone can provide.

Depending on your needs, the choice is between the 2100 and the 2500. The 261 is intermod prone, has very slow scan some other problems and now, very poor customer support, so it should not even be in contention here. The Yaesu 2500 has easily the best intermod protection, fastest scan rate and by a slight margin, the best durability. It has 30 memories which may not be enough for some (like me). The ICOM has decent intermod rejection and an added feature of attenuation by turning the squelch pot past 12 O'clock. Unfortunately, if you squelch too far, you will lose some weaker stations and repeaters. It's scan rate is about 8 channels per sec which is not the worst. But , it has 113 memories which is very good. You can also do keypad entry. It has more functions on the mike than any radio I've ever owned. A really nice one is that it finds the encode of a repeater by just pushing one button. Really slick. Some units are having a problem with a certain transistor blowing out but others don't seem to. In my opinion, if you are going to use it mobile in or near a city or where ever there is apt to be intermod, the Yaesu is the one of choice. If you are goint to use it as a base station, then the ICOM is the choice set. The antenna you use depends on whether you are base or mobile. For mobile I use the cheapest quarter wave. For base, I use a Comet GP-6.

From: spamkill@interl.net
Message-ID: <76da1g$a7d$1@forge.sbt.net>
Source record: 121676

HI folks,

Well, I'm debating whether to spend the bucks for the actual power connector to feed 12 vdc to my dj582th. I'm tired of buying the little jobs with the coaxial plug on one end and your cigarette lighter connection on the other which are made for cell phones and radar detectors. The damn cables are those cheesy coil cords, don't hold up well and there's no way to do anything for strain relief.

Is the cable they sell worth the money?

Otherwise, anybody have a suggestion for cable source which will work? I'll replace one end with the cigarette lighter connection, but we find the coaxial plug which attaches to the radio hard to solder as it's so damn small. Getting extremely aggravated buying these cheap pieces of dung, but want reliable dc power connection for house or mobile.

Tnx in advance and 73.

Just to play "devil's advocate" for a minute, how come people didn't read their policy before purchase? RE-stocking fees, no refunds ect are all in their catalog that everyone looks at cover to cover. Even Yaesu didn't give the guy a new VX-1, they only fixed it. From what I understand, even places like HRO can't "cash in" radios that people used for a day, week, month or whatever for new ones. People force these ham stores to "match" each other for the lowest price in the country before they purchase. You get the service you pay for. If refunds were allowed on defective items I could imagine all the hams that would say " i've had this FT-XX for a week & I don't want it anymore. All I have to do is break it and cash it back in for money"

5677. WANTED USED ICOM IC 706 MKII

Newsgroup: rec.radio.amateur.equipment

> -> through channel 69 at 805.75 MHz. Oddly, my book says nothing about the
> -> rest of the UHF channels.

Channels 70-83 have been removed from TV service. There are still a handful (48) of low-power relay transmitters authorized to operate in those channels - I know at least one (and probably more) have been dark for many years. Sometimes, the FCC can be slow to remove obsolete stations from its database.

Two of these (K70BO Herington, Kansas, channel 70; and K74BO Santa Rosa, New Mexico, channel 74) have been seen on the air as recently as summer 1997. I'm not aware of any being seen any more recently than that.

Incidentially, channels 52-69 are now being phased out too. Low-power relays are moving first. (ironically, many of them were originally displaced from 70-83, and are now being displaced again...) Once the conversion to digital broadcasting is complete, the FCC expects to be able to move full-power stations out of this band. Early plans to phase out VHF TV channels 2-13 have been scrapped.

73 Doug

Sale or Trade
Vertical, 10 through 80 meters Cushcraft R-7......like new......Was up only 8 Months.
I had to move to a apartment and put it in storage. Still mostly assembled and mint with the instructions. It would only take maybe 20 min. to toss it back together. Paid $379.00 new....I would like to get $225.00 or best offer/trade. This is pickup or I could deliver it in the Portland Or. area if the price/trade is right.
Things I might trade for, Clean:
Older Macintosh like maybe a SE 30 or ?
486 or better Laptop w/ 2 serial ports or ?
Hand held QRP rig like the Mitzuo 20 or 15 meter.

Can't take the kids to see their grandparents without
the back-shooters and snipers crawling out.
I finally got the chance to read the entire usenet thread.

Nice "joke" there, LJR- Smearing someone all over usenet.
Really funny....

Let me tell you what "unethical" is--
"Unethical" is making an accusation against someone
before thousands of people when you don't know the facts.
Even a murderer gets to tell his side before judgement,
and I didn't even get that consideration.

Of course I want more people to see my listings, but that's
not the only reason I gave this a try.
I sought both to help myself and to help the community
by finding an alternative to advertising on usenet.
If people weren't interested, they just wouldn't click on it.
You'll note I have ten auctions going and
no FA notices on usenet. I tried to pick
only words that would bring "radio-interested" people,
who usually are interested in more then one type item.
So I think I did try to be ethical, even if I was in error.
Being "wrong" about a new idea doesn't make me a crook or
scammer, but now I get to wear that label..

You can't un-accused someone anymore then you can
un-ring a bell. That's human nature. Accusation
automatic conveys guilt in most people's minds.
I'll just have to work harder
to prove I deal honestly.
Unfortunately, many people like to feel better
about themselves by damning others. They
will continue running their mouth.
Nice chirstmas gift. Thanks.

I wrote Ebay about this practice before I left to
take the kids to grandma's for xmas. They just wrote back
and said they'd prefer people not do it. So it's a
moot point now.

Tell ya what. I'm going to do just exactly what I think is
right and proper at any given time and, certain as sunshine,
some people are going to whine and moan about it. So be it.
I'll ignore them. If I think FA listings are proper
that's what I'll do, etc.

Those that know me, know what kind of man I am.
Those that condemn me without knowing me
have shown what kind of people they are.
I don't need to say any more about them.

Regards,
David Stinson AB5S

Source record: 121692

The shop in Portland Oregon on the other hand gets high praise.
Actually pointed me to a place where I could get what I needed for
less !!! Needless to say, future purchases will be from that HRO.

I agree with the above assessment re: Portland HRO. I wanted to buy a used amp
from them several years ago and the manager, who was driving up to Seattle (3
hrs from Portland), offered to drive it up in his car and meet me here to
personally deliver it! Now that's service!
I foolishly purchased the same amp from their California store because they
were selling it for a few hundred bucks less. They charged my visa then never
shipped it because they didn't have the right shipping box. After a month of
waiting, I decided to call down there to find out what was the matter and that
was the first time they told me they weren't going to sell it to me because
they didn't have the right box! Had they credited my visa when they cancelled
the sale? No of course not. That took another two months and numerous long
distance phone calls to straighten out. I suspect that what really happened was
that they sold it to someone local and just wanted to save themselves the
hassle of shipping it. But the real kicker was when the owner of all the stores
called me on the phone to apologize. I thought "OK this is a class gesture,
I'll forgive them." He even promised to call all his stores to see if another
amp could be found (the Portland amp was sold by this time). I thought this
really is swell. He said he'd call me back the next day and let me know the
results of his efforts. I thanked him profusely. Did he ever call
back?.......NOPE! A good service attitude has to come from the top down if
it's going to be effective.
So what's my bottom line: I do all my business ($5000 worth this year alone)
with three stores only: AES, Texas Towers, and HRO PORTLAND, but no other HROs.
Those three have given me terrific service. Call the guys in Portland...they'll
treat you right. My two(+) cents. 73, John, K7JY.

My friend here, Delmer apparently does not know how to read.
It was not me who was complaining. It was everyone that I was talking
to. And Yaesu took care of the problem when HRO refused. If there
was no problem, and I was being a "jerk", then Yaesu certainly would
not have done anything to the HT. After the initial refusal of
service from HRO, I didn't make a scene; I now give my business
to other companies, and that's the end of the story.

In article <3689e4a4.0@blushng.jps.net>,
Delmer <"delmer"@aol.com no spam> wrote:

Model 810 Thermo-Probe lets you heat-test integrated circuit components
with constant ease and accuracy. No
ovens, no heat chambers ... everything is in the open and easily
accessible. Thermo-Probe applies regulated and
accurate heat to integrated circuits, diodes, resistors, capacitors,
transistors or any other type of electronic
component. You pinpoint heat-drift and thermoelectric problems right
on your test bench or production line.
Thermocouple Sensing Probe provides temperature reading from any IC
during heat test .Thermo-Probe Model 810
is ideal for Design Engineers, QPL Managers, Technicians and
Trouble-Shooters. Heat Tips are available for
nearly all types of electronic components at:
http://www.micro-technical.com/ Unit is in working condition but no
additional warranty provided and sold as is.

Source record: 121697
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I recently bought a used Kenwood TS-850. Before I bought it I read all reviews and articles I could lay my hands on. One of the few complaints i noticed was that the 455kHz SSB filter is a "moderate quality ceramic filter". Having an Icom FL44A 455kHz SSB filter on hand, the idea of substituting the stock ceramic filter for the FL44A (which I believe is a pretty good SSB filter) popped up. Before ripping the rig apart I would like to hear your opinion about the idea.

If anybody has done this "operation" I would love to hear about the result. Otherwise, could anyone with more technical insight than myself give his/her opinion on the following questions:

1) Does the FL44A has the same center frequency as the stock Kenwood filter?

2) Is the Icom filter compatible withe the stock Kenwood filter with respect to filter impedance and attenuation?

3) Any other reasons why the swap might not be successful?

It sounds to me like you may have recently modified this radio for out of band operation. I encountered the same problem after doing this mod to my FT5200 and it turned out to be the offset setting was not getting saved with the memory channel info. I had to reset the radio to clear the memory, then set the standard offset for each band (0.600 VHF, 5.000 UHF) in the radio prior to programming the frequencies into the memories. That took care of it for me. If you need more specific information, I can help you via a direct e-mail. 73 and good luck.

Robin.

Just a comment... I own an Icom IC-736, that I'm using strictly as a general coverage SW receiver. This rig has an exceptional receiver!

I still recomend just lifting one side that way you can rejoin them with a small ball of solder and no more bending. If you break them with cutters you will most certainly damage the PCB. I certainly would not want to buy a second hand radio which some one has buchered in such a way. Take the time and do it properly. cheers Eric

HRO really has not cornered the market on less-than-perfect salesfolks. I've purchased several items from HRO in the last year, ranging from an exotic Force-12 vertical to a couple of small items and have been served well.

I found a Salesman at one of their stores who went out of the way to get detailed information for me on the antenna. I ordered. They shipped, everything worked. Now I call that store first when I'm looking for something.

I would rather build a long term association with some one whom I trust, and whos advice I respect and gets to know me. In the long run, I'll get better value for my dollar because I'm getting what I need.

Last... If you as a customer quibble over the last $1 on every price, why should they provide any extra service. Your not coming back if some place else is half-a-buck cheaper. Pay for what you get, and you'll get what you pay for.....

Last plus one... Let say that my sales-guy at HRO knows I'm looking for a satellite rig used and one comes in.. Who's he going to call, Me or the "Will you match the price" ham that whines at every chance.

Soap box back to you.

I've acquired a surplus Varian VS-7455CB amplifier and am trying to find any technical information on it.

I tried contacting the manufacturer but the division that manufactured it was sold to another firm and that's where the trail ends.

Since it has an "N" connector for both input and output I have to assume that it's designed for UHF or higher, but that's purely a guess.

Any help would be appreciated.

Thanks in advance.

Dave, I have some info on the MItrek, and the T43 should be a 40 watt, VHF radio. Without knowing the exact chassis number, it's hard to say what "range" it is in. These radios are hard to get operating outside of the stipulated "range". As for a key, gimme your postal address and I can mail you one. They are an excellent radio, and I have my 9600 packet on a T34 and my 1200 on a T53. Really GOOD info can be found at <www.seits.org/seits/>. Check this out and you'll see that these radios are worth keeping. I have no more manuals left, but can copy and send a few pages if you know what you need. 73 de VE6INM (Glenn)

Ray:
It is similar to but not interchangeable with a Phillips. Usually
identified by a small round indentation next to the cross slot on the screw
head. I believe Sears has them, I get mine from Snap On. Any industrial
tool source will have them. Hewlett Packard has been using them for 20
years, and many Japanese radios use them also. You can force a Phillips,
but sometimes with disastrous results. Now you know why your Phillips
screwdrivers don't fit as well as it should.

I have several Alnico Magnetic #15 earphones made by C.F.Cannon of Springwater NY. These are a single earphone with an attatched headband, and are ideal for use with a crystal set. Black plastic, they look new, but are a vintage type. The diaphrams are bright shiny etc., and the magnets in them are still strong. I have seen these sold by Allied Radio in the older catalogues with crystal set kits. etc. $10.00 each including shipping.

At the Anaheim store, that would not have been enough to help! Our company ham club worked with the company disaster management team to get about $35k of equipment to equip 5 sites with HF-VHF-UHF equipment and about dual band 40 HT's. You think that they might remember the order when we came in to pick up the extra odds and ends that we forgot to put on the order. They still treated us like lepers! I've moved all of my spending over to AES. I don't even bother looking around HRO any more!

From page 1 of the time honored text, "You Can't Please Everybody":
Building ANYTHING involves compromises. Scanning involves
a bunch of settling times, not the least of which is
waiting for the tone detector delay.
At 100 Hz, you have to wait 10mS for each cycle of the tone frequency.
How many cycles do you need to accurately determine it's presence
in the presence of noise? This is NOT a poor design choice on the part
of Yaesu...it's MATH.
You fix it by slowing down the scan speed. Then you guys would be
bitching about how slow the scanning function is.
You could help some by using a DSP to detect the tone without
integrating the output. But then you'd bitch about the cost and
battery life. You could shorten the integration time, but then you'd
bitch about detector falsing.

Radio designers are not dumber than anyone else. They have SEVERE
constraints and conflicting requirements. They make the best tradeoffs
they know how. Customers have a nasty habit of seeking out the absolute
best features of radios optimized and compromised for different
purposes. Then they assume that they can have all these optimized
functions in ONE radio that will tune DC to Light, fit in a thimble
and cost a buck. It ain't gonna happen. If you want the perfect
scanner, go buy a scanner. If you want to sell your VX-5, send me

email.

Hello All,

I have a Heathkit HW-202 2m Solid State 2m FM 10 watt Mobile
Transceiver.
Works & Looks GREAT!!!! Working Condition 10 of 10 Physical Condition
9.5 of 10.
Will take OFFERS..... For $$$ or Trade... I don't know what is a
reasonible price for it.
Please make me an offer.
Contact me: (805) 272-6949 or E-mail: mikrounit@earthlink.net

Thanks & 73,

Mike Green KQ6MU

5734. ICOM IC-746 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-31 00:00:00 UTC
From: "Samuel S. Yates" <ab4n@erols.com>
Message-ID: <76gvr8lph1@winter.news.rcn.net>
Source record: 121423

I have a new IC-746 and am wondering if the manual is in error or my radio isn't working the way it was designed.

The manual indicates the rear panel CW Key Jack (as well as the front panel CW Key jack) may be used to key the internal CW keyer.

I am able to use my iambic paddle to key the internal keyer while using the front CW Key jack as expected, but when I connect the paddle to the rear panel jack, the keyer function doesn't work, though I am able to key the rig (like I am using a straight key). The keyer configuration menu is configured for Electronic Keyer.

My questions is: Does the rear panel CW Jack key the internal keyer or is it just for connecting an external keyer or a straight key (or bug)? I cannot find any configuration information in the manual that describes how to activate the keyer function using the Rear Panel CW Jack, it if it does.

Thanks for your help. To respond directly, remove "NOSPAM" from my email address.

Happy New Year,

Sam AB4N

Please describe the charger.
Do the radios face forward so you can see the display while they are in there or are they sideways Domino style?
Do the radios stand straight up or are they at an angle when plugged in the charger holes

What are the dimensions on the charger? What color and what shape
cosmetically are they?

Gimme a break!

This rationale DOES NOT make sense.

Fact is, whatever and HOWEVER they decided to design the thing, they
are selling it as ABLE TO SCAN with PL and DPL decode, and the radios
aren't performing as adverised. Period.

Perhaps you might like to consider something more reasonable, like THINKING!!! That might even be INTELLIGENT, heaven forbid, and might make your responses. appear intelligent!!!! That would be the best!!!! For you, I'm too old and too wise to give a shit when some cockroach brain gives a meaningless sneeze.

I got my Novice license when I was 10, living in a tiny farm town, with the nearest ham operator 60 miles away. I did it by self study and reading QST magazine via the "visiting library-mobile" I got my General 4 months later. My First Class Radiotelephone was issued when I was 14, and I got a job that summer as the night engineer at the local radio station. When I was 16 I was contracted to build the first local Television station. I built the entire transmitter and antennas, buying a switcher, 2 cameras, and a VCR. All self trained, from reading and doing. I got the necessary money to indulge my hobby from raising corn, and feeding it to chickens until they were the right size to send to the market. I killed, de-feathered, cleaned, and sold these to the local market for the necessary cash.

Later in life, before graduating from high school, where I taught the electronics class, I built and sold satellite tracking stations to the U.S. Government, a year after the launch of the sputnik satellite, which I discovered with my radio telescope and notified the govt. of its presence and trajectory.

I only mention this, as I have a normal I.Q., but abnormal parents, who, instead of handing me things, pre-packaged with all of the work and thinking done for me, allowed me to learn to think, do, and package for myself. They wanted me to have things that were meaningful. Things like self confidence (based on self worth), concrete knowlege which might make me useful to myself and others. The ability to think and reason out new knowledge, the skills of imagination, researching (reading, vocabulary, writing/communications), planning, construction (including soldering, machining metal and plastic, working with tools, selecting, testing, identifying, and using electrical and electronic components), troubleshooting, and completing (a task once started). May GOD bless them and may all children have such considerate and wise parents. They never felt that they had to buy my affection and did always feel that they should equip me for a meaningful life, in which I could be a benefit to myself and to society as a whole. They were simple dirt farmers, but that type of life leads you to thinking about what life is really all about. I tried to do the same with my own children, who only recently have come to appreciate my (genuine) (past) love and concern for them. They find themselves 20 years ahead of the curve, compared to their contemporaries. They seem to feel that the world is devoid of the ability to think. They seem to feel that the people who work with them do not know that to perform sucessfully that you think, plan, and do, in that order. They find themselves being supervisors of workers that are twice their age and who come to them for counseling, advice, and look toward them for leadership. They find that their management likes them and sees their value and rewards this with bonuses, advancement, and responsibility.

Now, in this light, lets go back to the question as to "What HT should" be considered" for a couple of emerging pre-adults...

Consider, these are "youngsters" with an entire life ahead of them. They are most probably the result of our current lack of educational system, though I am not just stuffing them in that woeful hopeless box, after all, they may have elected to get a real education, in which case my recommendation would even mean more to them. There is nothing which they can learn which would make them more meaningful to themselves, their family, or society, by getting a couple of HT's. They can get exactly the same increase in personal self worth by learning to program the family VCR and talking back and forth via a set of CB radios. Yes, they wouldn't get to act like many of todays hams and tie up the local repeaters with meaningless drivel about the local weather, local scandal, local traffic conditions, local repeater regs, or the wife, her cousins, uncles, aunties, and others visiting, giving them, finally, an excuse to sign off and give an opening for someone else to complain about their holiday visits. They couldn't show their friends how "adult" they were, in that they had a cell phone on which you had to be smart enough to say "over" and relase a button in order to let the other guy talk, and which cost much less in monthly bills, allowing hourless meaningless conversations with which to tie up the local repeater.

Perhaps, just perhaps, we might allow them to really learn something. Something which might just make them useful to themselves and others. Might even interest them enough that they found an avocation which was well paid and meaningful.

Might even learn a few of the really useful things in life. Things which would be meaningful to them every day of their lives.

I stick by my original post!!!!!! After all, I didn't say to get them a copy of the "Handbook", QRP Projects, an HP Scientific Calculator, and a box full of parts, like I did with my sons. After all I want my boys to stay at the head of their peers, not have to move aside for some upcoming young genius.

Say something intelligent to me and others, or join the masses.

i guess i'd fit in the middle somewhere heaven forbid ;-)

i'm 31, a young ham more or less, and have run the gambit.
as a disabled veteran of desert storm, my mil career was cut short and
looking for something to do, i entered ham radio.

10 days, that's right, 10 days of studying took me from no ticket to
general in one fell swoop.
i've a b.s. in comp sci and m.s. in comp prog so my technical exp is not
in the electrical field.
this did not however prevent me from enjoying ham radio.

the question was about an ht. plain and simple. other aspects of the hobby could certainly be encouraged but fufilling the primary goal of whoever is trying to get a ticket should be considered first.

a younger friend of mine was interested in ham radio so i agreed to help a little.
2 weeks later he received his tech ticket. an ht was his first purchase as he did not have test equip nor easy acess to it. so a used working unit was the best choice. a week later he decided it did not have enough power for 'home' use. together we built a small tube type power amp and a 5/8 wave ground plane antenna.

now he could 'get into' some of the repeaters in the area. he learned from hams other than myself all about the wonders of hf and what it took to get there. he is doing so, studying code and theory again to get hf added to his ticket. all the while, sharpening his 'home-brew' skills designing yagi antennae and the like.

his 'pioneer' spirit was not subdued by being handed and ht, but rather brought out. as was mine after purchasing several items of 'store bought' gear.

i've built amp, antennae, combining/splitting devices, duplexers and so on but have never built a rig. it doesn't interest me. i own/operate my own multicast repeater system here in salem [see the sig below]. 75% is store bought the rest my own humble attempts at home-brew. i've attempted to make hf a part of all hams in the area by including an hf remote base on the system so the techs could hear what's out there and what a qso sounds like in contrast to the 50mHz+ conversations.

i agree with all the prior statements of child rearing, as i have 4 myself, but that was not the issue.
an ht is ONE of the best items to secure for that new ham who is concentrating on a tech license. an hf receiver KIT would be another item to include. the new ham could decide if they would like to participate in the hf area after hearing what it has to offer.

I'm looking for information on the computer interfaces to Yaesu HT's, specifically the FT-51R, FT-50R, and/or VX-1R. Any info on commands, format, comm parameters, etc. would be appreciated.

I currently have (legitimate) ADMS-1D software and cable. But I'd like to experiment in other control and programming options, not provided by the ADMS software. Unfortunately, Yaesu refuses to release interface information.

Since I'm not a regular reader of this newsgroup, I'd appreciate receiving responses by email at "anon1946@anonnet.com" (an anonymous remailer, to foil spammers). I will summarize interesting responses back to the group.

Thanks for help!

Open it up and check the connection from the center of the BNC antenna connector to the PC board. Make sure this has not come loose or that it is not a cold solder connection. There may be a small helical filter (coil) in this circuit so check for cold solder and loose here too. Also check for shorted cap. if there is one in this circuit. In general, check all connections around this area. Could be an old cold solder connection that finally built up enough residue and opened up. Almost got to be something right around the antenna input circuit.

I am trying to locate a HP 5253 Plugin for my 5245 mainframe frequency counter. This plugin goes from 50 to 500 mhz. If you have one that you are no longer using please email with price. Thanks Don KB6GQA

5754. Amp not what it appears to be!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-31 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <368C6831.8EEDDC62@datacomm.com>
Source record: 121443

I purchased some ham equipment recently. Included in the "pile" was a Palomar 90a HF Tube Amp. In my effort trying to obtain a manual for it I began looking for the possibility of Web presence of Palomar. They weren't easy (for me) to track down. I first learned that the correct name was Palomar Engineers, located in Escondido Calif. I finally found an EMAIL address, receiving a response (see below) including their Web URL, and a note that the amp was not manufactured by them.

* * * * * * *

The amplifier is not one of our products. Several "Garage Shop" operations
make amplifiers with our name on them. We never can find their locations.
"Palomar" is a registered trademark of ours. --- Our web site is http://www.Palomar-Engineers.com --- Jack, K6NY, Palomar Engineers

* * * * * * *

I guess that at this point I will try to see if the amp works and sell it, as I don't believe I will use it.

Short of obtaining an operation manual, could anyone offer suggestions as to the proper setting of the tuning and loading controls? I have never played with a tube amp before, and I would guess that operating the amp with incorrect settings could result in damage.

Thank you.

Louis

I agree totally. Face it, the days when kids built a spark gap and got into Ham radio fro there are Over. I think it is set up pretty well right now, FM first, then code, then up from there if the interest remains.

This was made for 11m operation.

You'll find someone on the rec.radio.cb ng who'd, I'm sure, be quite
happy to talk you through it's operation. but be prepared for only
10-12, maybe 15m operation only:-)

Source record: 121446

I bought the cord and am quite satisfied. It has a right angle connector
instead of a straight one. This keeps the strain off of the connector. I
use the 580 and it's associated power cord every day and have never
experienced any difficulty with it.
LOL

I would also appreciate knowing what mods you did to the Corsair II. I have one that has been in use for several years. Occasionally I lose several segments in the frequency display, and the tuning seems 'jerky' when in narrow CW mode.

Any suggestions for improvements to the rig are much appreciated. If you reply by e-mail please remove the NoSpam from my return address.

Thanks in advance

I've commented to many people about the hype associated with the erroneous "New Millennium". Regarding your comments about a "clever marketing ploy" etc.. I think it was Robert Heinlein that once said, "never ascribe to malice what can be explained through stupidity." I don't think the marketing types are malicious, just stupid.

By the way, many, many stores have these "millennium countdown clocks" for sale. The problem is that all that I have seen count down to December 31, 1999. I visited with one store manager who was absolutely incredulous that they were in fact wrong. But he isn't going to stop selling them because they are a big hit and he is making lots of money.

From: Spencer Ritchie <sfritchie@worldnet.att.net>
Message-ID: <76f2u0$iai@bgtnsc02.worldnet.att.net>
Source record: 121558

I've been rebuilding an sb-220, and came across a suspected problem, or at least I think it's a problem. When I attach a vom meter ground to the chassis and the the hot lead to the antenna input, I get resistance to the tune of about 1-2k. This is without the tubes installed. I've replaced all the input and output cables, several capacitors. Most of the others test good. I'm wondering if this is normal, or have I missed something. Any help would be appreciated. Thanks in advance.

Message-ID: <76f5ki$n3t$1@news3.mr.net>
Source record: 121559

The 212 has 20 mems and the 242 has 40 mems. Some other changes but not much. The 212 closed out at $160 some time ago and should be worth no more than $110 to $115 now. The 242 maybe about $140 or so. Remember, you can buy a brand new ICOM, Kenwood or Yaesu for $195 new or about $140 to 150 used so how much would a lower rated RS bring?

It'll work, but there are a lot of downsides to doing it.
The little HT will suffer more intermod when hooked
to a larger antenna. The antenna connector on the
HT will rapidly become wallowed out and intermittant.
Speaker audio is too low for use as a mobile rig. Etc.

I'd suggest buying a real mobile rig for a few bucks
more, and reserving the HT for those times when
you're out of the car.

Source record: 121568

I have a collectable VOM, that I have no need for.

It is a Triplett 310 "Mighty Mite" VOM. It includes a nice real leather case,
with Triplett imprinted on it, a set of original probes, and the original manual.

This unit looks as close to new as you would ever find. I have looked all over it and can not even find one scratch. The manual looks new, except for the possibility that the pages are not quite as white as they once were. The leather case is made so that it can go on a belt, but does not look as if it ever was on one.

I have searched the manual, but find no information as to the date it was made. My guess would be in the 50's, but that is only a guess.

$ 75 plus shipping from Florida.

Happy New Year to all.

It may not be as old as you think. I bought one from the Jensen Tools catalog
about 3 yrs ago. Great taut band meter movement; good compact analog meter,
sold for about $100.
(they haven't changed in 30+ years).

Does the fuse blow when you turn on the rig?
If it does ;
You might check the rectifier curcuit. That your OHM meter and look for
a short in the bridge rectifier circuit. Take the plus lead and put on
the plus side of the bridge and the negitive lead on the ac side of the
bridge. Look at the reading then reverse the leads and look at the
reading one will read high ohms and the other should read low ohms if
both are the same you have a shorted out rectifier. Do the same thing on
the negitive side of the rectifier. You could also have a filtering cap
in the power supply that is shorted.
Does the fuse blow when you key the transmitter?
You might look for a short in your DC To DC converter or a short in
your High voltage rectifier. If the rig turns on I dought that the
transfomer is bad.
Good luck I hope I helped you

Source record: 121573

Icom IC-781 H.F. transceiver-special price! Excellent condition radio includes: UT-36 Voice Synthesizer, optional FL-103 SSB filter, and owner's manual. I have reviewed the few 781's that have been offered and sold, and determined an attractive price to be $2900. This is NOT a

"starting" price, so save your breath on lower offers. I'll pay the UPS

shipping charges (you pay for additional insurance). I have factory shipping containers and lots of plastic peanuts! Steve / N9FD. (812) 948-2973. Happy New Year!

>Yesterday, Having learned that the HAM STATION in Evansville, Indiana

They are a good bunch of guys. I've bought quite a bit of equipment, both new and used, from them over the years and never a problem. They're pretty decent to deal with on trade-ins, also. I bought my very first ham 2 meter handi-talkie from them, and Dan, the owner, was good enough to take the time to show me all the features on the unit. They get an A+ in my book!

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label,

and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)
_____
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local
oscillator crystal. However, a 10.245 MHz crystal is used

instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on

the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

5781. Re: Best Amp to Boost Yaesu VX-1R for Mobile Use?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-31 00:00:00 UTC
From: mhgates@my-dejanews.com
Message-ID: <76g8d3tth1@nnrp1.dejanews.com>
Source record: 121578

Thanks, Michele, Gary, Mike and Pitje!

Gary and Mike:
Now that you mention it, I have wondered about the SMA screw-on connector wearing out. I have a 17" Comet SMA handheld antenna I sometimes put on it to improve performance. The stock antenna doesn't seem to be doing as well anymore (probably because of the wallowing out of the connector). I used to be able to hit the local repeaters with it(Charlotte, NC)...

Hmmm... :-)
But I have an SMA to BNC adapter that I sometimes use to connect to my 5/8 wave in my truck! Maybe I should invest in a handheld antenna with a BNC connector and leave the BNC adapter on the radio all the time. It will be easier to switch back and forth, and I'll do less wear and tear on the radio's screw-on SMA antenna connector! It still seems to work, so maybe most of the wear is on my stock antenna.

As for the weak audio in the truck, I use an earphone that plugs into my external mic that helps a lot. There are, as you say, a lot of wires hanging out, though. Guess I should seriously think about a 2M mobile rig... There are several good one's I've seen reviewed in QST for around $200. On the other hand...

Michele:
Like you, I like the utility of using the same radio I carry on me as a mobile. I've already invested in most of the other equipment I'll need. When I consider that I could get more use out of my investment, I'm a little skittish about buying a new mobile rig. Plus, I could have a dualband mobile (several UHF repeaters in our area) and a wide receive scanner with just an amp, versus buying a single band mobile.

Also, my wife might be more forgiving if I buy an amp and a BNC handheld antenna, rather than a new rig. Even though the cost will be about the same, it's her perception that will determine how long I'm in the doghouse :-}

Pitje:
Thanks for the humor :-D. The increased altitude would probably help me out, but I'd still need a little more power to my rig.

Hope you all have a great new year!

Thanks again for the advice.

73,

Mike
KF4UVO

5786. Yaesu VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-31 00:00:00 UTC
From: MRussel1@twcny.rr.com
Message-ID: <368ba314.2748644@news-server>
Source record: 121583

I have seen some messages about problems with the VX-5R from what i can remember it was something about ctcss not opening the sql when in scan. Is there any other problems with this radio that i might want to be aware of and aside from the ctcss problem how does the rest of the radio function on rx , deaf on hf or some other band, there always seems to be some trade off with a wide rx.

Anyone have dimensions on the radio, i have seen a pic but it was a bad one and nodody has any dims on the ht.

Thanks and 73's De N2HYO - MIke

Source record: 121593

Tom,

I believe that Yaesu is not alone in this. Other manufacturers seem to have the "fix it in the next model" attitude too. It is a very disturbing trend in ham radio equipment, this new "rush to market" approach.

Hi Mike,
I guess every one is offering a guess so here is mine.
Watch the IP or plate current closely as my guess is that the final tubes may be drawing too much current on transmit. this could also be caused by wrong bias setting. reduce the carrier setting all the way to the left and see if it still draws to much current. as a last resort remove the final tubes (safely remember the high voltage) and see if it still blows fuse. I doubt that it does this would indicate problem with the tubes or their circuity.
good luck.

I have some test equipment for sale.

HP 1712A Oscilloscope
Specs:
Dual trace
2 channel
Delayed sweep
200 MHZ BW
5 mV/div sensitivity
High impedance or 50 ohm input, switchable
more......

Price: $400.00 neg.

Tektronix 465 Oscilloscope
Specs:
Dual trace
2 channel
Delayed sweep
100 MHZ BW
5 mV/div sensitivity
more......

Price: $400.00 neg.

Tektronix 465B Oscilloscope
Specs:
Dual trace
2 channel
Delayed sweep
100 MHZ BW
5 mV/div sensitivity
more......

Price: $425.00 neg.

HP 8640B RF Signal Generator
Specs:
500KHz - 512MHz
-130dBm to +20dBm
AM, FM Modulation
Internal Audio source
More.....

Price: $500.00 neg.

Polarad 1606E RF Signal Generator
Specs:
1.8GHz-4.5GHz
Consist of 1106E Generator and 1020T Modulator.

Price: $100.00

Boonton 92B RF Milivoltmeter
Specs:
-60DBm to +23DBm (50 ohm)
10KHz to 1200MHz

Price: $100.00

HP 3466A Digital Multimeter
Specs:
Bench top
Very accurate
True RMS
More.....

Price: $60.00

Hioki 3104 Clamp on Ammeter/Multimeter
Specs:
0-1500 Amps AC
0-750 Volts AC
0-75 Volts DC
0-100K Ohms

Price: $50.00

Hioki 3128 Clamp on Ammeter/Multimeter
Specs:
0-1500 Amps AC
0-750 Volts AC
0-75 Volts DC
0-100K Ohms

Price: $50.00

HP 400E AC Voltmeter
Specs:
-60DBm to +50DBm (600 ohm)

Price: $25.00

VuData in circuit Component Checker

Price: $50.00

Simpson 635HV Multimeter

Price: $20.00

Simpson 306 Transistor Tester

Price: $20.00

Other Misc. stuff
Clamp on Ammeters
Meggers
Pace Solder Stations
HV AC probe

I hate to say it, but I suggest that you read the manual. The V7A does not
by default do much with the number keys. There are a few options in the
menus which will enable you to send DTMF from the keypad, and to enable some
control modes - one being via DTMF (so you can still send tones for autopatch,
etc.) and another where you can remap some of the keys. I do not have my
manual or radio handy this second, but I have gone through this excercise so
I know that you can get direct freq. entry from the mic, and that is is not
enabled by default. If you are still stuck, e-mail me directly, and I will
try to help you in more detail off-line

I use an Icom W32A dual band HT in the truck, hooked into a Maha 201 dual band amp.
hooked into a Cushcraft dual band mag mount.. Very satisfied with it... it works great..... and I can take it out and carry it with me, in less than a minute.
The HT works SO much better connected to a mobile antenna as opposed to the rubber duck.
The maha 201 was 149.95 at HRO, and with 5 watts in you get 45 out on 2m.

This is very much PAR for the course with Yaesu. Every new portable they have introduced in the last few years have, and continue to have design and software flaws. They also usually do not have what is advertised as well. The specs are "puffed" and they do nothing to resolve the problems. Not until thenext radio and then it has a whole new set of "glitches." Wait about six months before buying, then ask for comments from the owners to see what all the problems are, and if Yaesu ever responded to the problems.

I would like to find a repair manual for the FL-101/FR101 Digital twins transmitter/receiver. A copy would be fine, an original would be exceptional, but I really just need the information.
Thanks, 73
mrfeeney@aol.com

Trade my Drake TR-4 with matching power supply/speaker
in very good unmodified original conditional for your
National NC-270 in equal condition. I am just not much
into ssb rigs. I primarily collect am tube gear. The
TR-4 works great.

Source record: 121655

Why is anyone concerned with running out and buying one of these with the known RX problem? Hopefully Yaesu will fix this problem and then let the race begin on where to buy one...

5826. MFJ 9420 SSB Travel Radio - Noise Blanker Mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-12-31 00:00:00 UTC
From: kt4ht@aol.com
Message-ID: <19981230235206.29438.00004608@ng12.aol.com>
Source record: 121656

Anyone know of a mod to make a noise blanker circuit in the MFJ 9420? It's a fantastic little radio, but without a noise blanker, it's a bit hard to use in the mobile.

Thanks,

Mike, KT4HT
